Gateway Unit

The gateway unit is a conversion unit for connecting a ROBO Cylinder controller to a field network such as DeviceNet or CC-Link. Connect a gateway unit to your field network, and link the gateway unit and each controller via serial communication (RS485). Numerical data such as coordinates, speeds, accelerations and current values can be sent and received between the network master (PLC) and controller by means of I/O-level communication.

Features

1. Move the actuator by specifying positions from a PLC via network.
2. Perform push-motion operation via network.
3. Operate the actuator by directly sending the target position, speed, acceleration/deceleration and positioning band as numerical values from a PLC.
4. Read the current actuator position and various signals using a PLC.
5. Connectable to a maximum of 16 axes.

Functions

One of the following three operation modes can be selected.

(1) Position-number specification mode

Input target positions, speeds, accelerations/decelerations, positioning bands and other settings to the controller in advance as position data, and specify a desired position number via network, just like you do with PIO signals, to move the actuator. A maximum of 64 positioning points can be set. Various status signals can be read using a PLC.

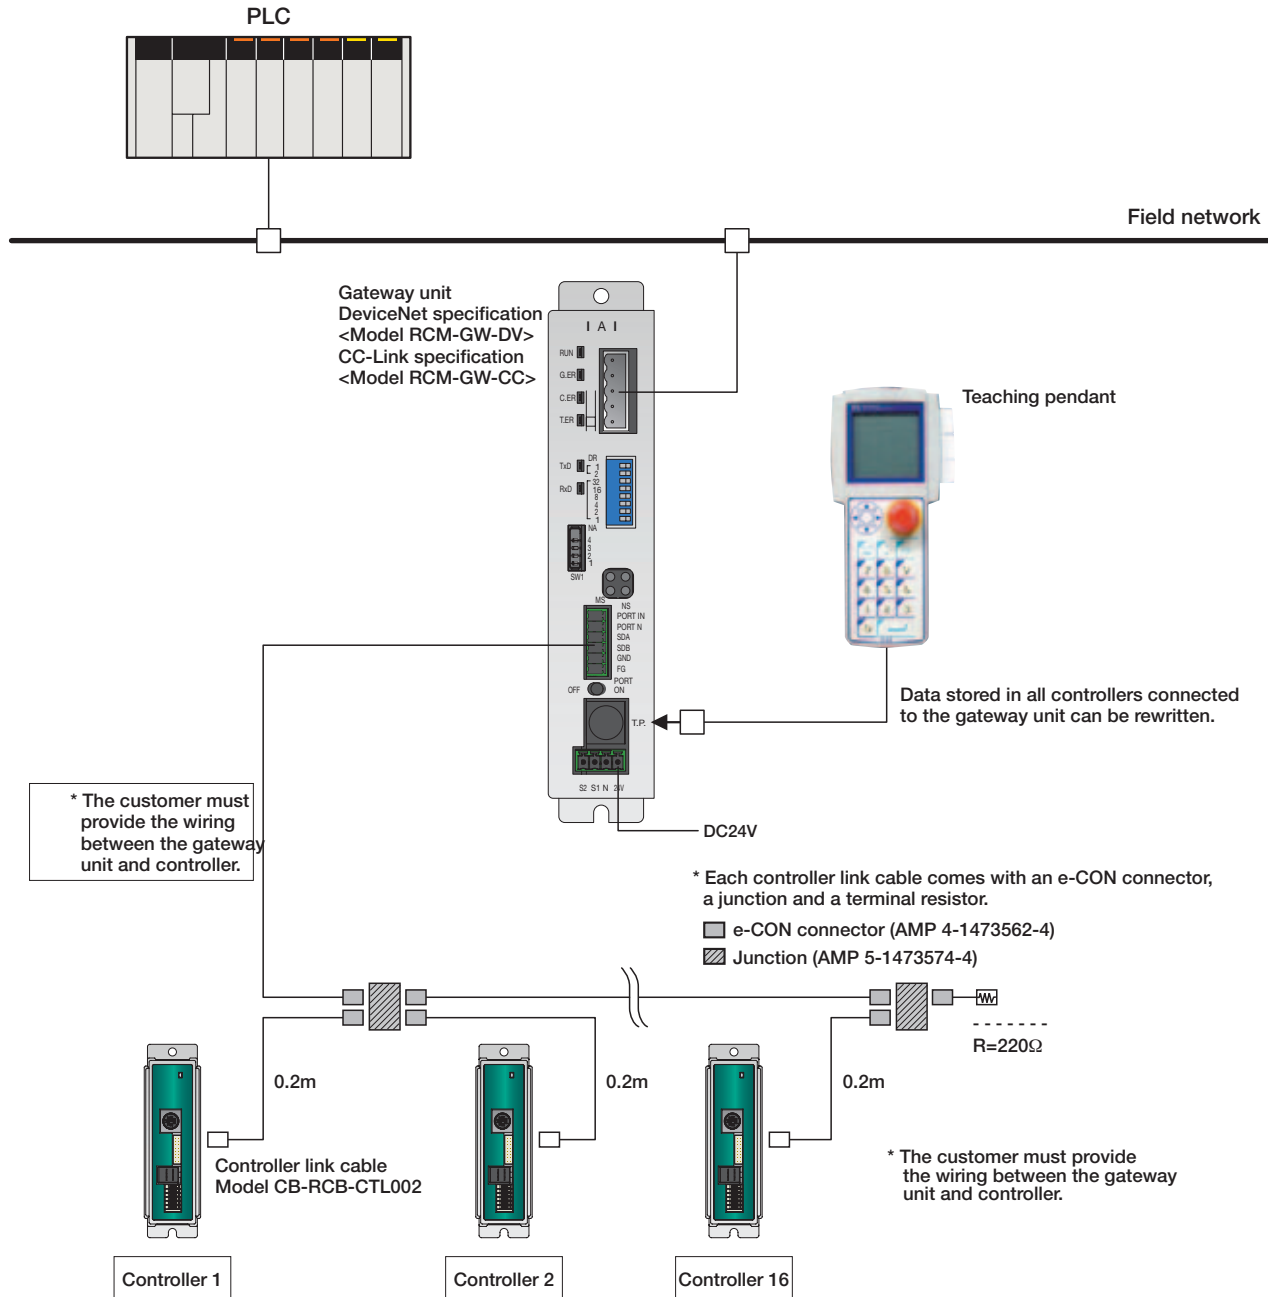

(2) Positioning-data specification mode

Specify a desired target position, speed, acceleration/deceleration, positioning band, push band, current-limiting value, etc., directly as numerical values to move the actuator or cause it to perform push-motion operation. Various status signals can be input/output and current position data read using a PLC.

(3) Simple direct/position-number specification mode

Call desired position data except for a target position (by specifying an applicable position number), and specify only a target position as a numerical value, to move the actuator. A maximum of 512 positioning points can be set.

System Configuration Diagram

Connectable Controllers ERC2 / PCON / ACON / SCON (*1)

(*1) SCON will communicate at the I/O level when connected to the field network even if the gateway unit is not used. It is necessary to use the gateway unit when communicating positional data.

Controller link cable

(Comes with e-CON connector, junction and terminal resistor)

PS-24

Rated output current 8.5A

Maximum momentary output current 17A

Features

1 Maximum Momentary Output of 17 A

While the rated output current is 8.5 A, maximum momentary output current of up to 17 A is supported. This lets you select an appropriate power-supply capacity based on the total rated current of actuators, without having to consider the maximum momentary current that may be generated by the actuators during acceleration. Because you no longer need to use an expensive high-capacity power supply, cost can be reduced substantially.

* The maximum momentary output current must be considered if the actuator operating conditions are tight. For details, refer to "Selection Guide" on the right.

2 Supporting Parallel Operation

Up to five units can be operated in parallel. Even if any one unit is found short of power-supply capacity, all you need is to simply add one more unit without replacing the unit in question with a larger-capacity model.

3 Load Detection Function

The load factor can be detected using the RDY (ready) indicator lamp and RDY output signal.

Selection Guide: Number of Actuators Connected

When selecting a power-supply unit for operating multiple actuators, normally a unit with a capacity equal to or exceeding the total maximum current of all actuators is chosen. However, actuators generate their maximum current only momentarily during acceleration, etc., and in many cases the power-supply is over-specified. On the other hand, the PS-24 power supply provides the following advantages:

1. Supporting maximum momentary current of up to twice the rated current.
2. If you need more power-supply capacity, you can simply add an extra unit or units. The above features let you select an optimal power-supply capacity.

Number of Power-Supply Units

Basically, how many power-supply units you need should be determined in such a way that the total rated current of all actuators will remain within the rated current of the PS-24.

If the load condition is tight, however, the power-supply capacity may still become inadequate. In such cases, add an extra power supply or supplies.

Examples of Tight Load Condition

- Large load (close to the rated load capacity of the actuator)
- High acceleration/deceleration
- High speed
- Simultaneous operation of multiple axes
- Use of the RB75 series (Structurally these actuators allow maximum current to flow for a longer period.)

Table 1. Rated Current of PS-24 and Allowable Maximum Momentary Current

Number of connected units	Rated current [A]	Maximum momentary current [A]
1 unit	8.5	17
2 unit	15.3	30.6
3 unit	22.95	45.9
4 unit	30.6	61.2
5 unit	38.25	76.5

Note) Consider a safety factor (loss) of 10% for the second and subsequent units.

Table 1. Relationship of Actuator and Power-Supply Current

Controller type	Actuator type	Power-supply current [A]		Number of connected axes per PS-24 (reference) *1
ERC2	ERC2	Rating (= Max.)	2A	8
PCON PSEL	All RCP2 models			
ACON ASEL	SA4, SA5 (20W)	Rating	1.3A	6
		Max.	3.7A	
	SA6 (30W)	Rating	1.3A	6
		Max.	4.2A	
	RA3 (20W)	Rating	1.7A	5
		Max.	5A	
	RA4 (20W)	Rating	1.3A	6
		Max.	3.7A	
	RA4 (30W)	Rating	1.3A	6
		Max.	4.2A	

*1 The figures under "Number of connected axes per PS-24 (reference)" are calculated based on the assumption of "Rated current of axis x Number of axes < Rated current of PS-24 (8.5 A)" or "Rated current of axis x Number of axes < Maximum momentary current of PS-24 (17 A) for ERC2 and RCP2".

Name of Each Part

1 Ready indicator (RDY)

2 Overload-detection level setting dial (LF.DET)

* This dial has been set to an appropriate value prior to the shipment.

3 Ready output signal (RDYOUT)

4 5 +24-V output terminals (+24V)

* [4] and [5] are connected internally.

6 7 0-V output terminals (0V)

* [6] and [7] are connected internally.

8 Frame ground terminal (FG)

A grounding terminal.

9 AC input terminal (AC(N))

10 AC (100-VAC) input terminal (AC100(L))

11 AC (200-VAC) input terminal (AC200(L))

* Connect the power source between [9] and [10] for a 100-VAC input specification, or between [9] and [11] for a 200-VAC specification. The terminals are not common between the two power input specifications.

Specification Table

Item	PS-241	PS-242
Rated DC output voltage	24V±10% (Varies depending on the load)	
Rated DC output current	8.5A	
Maximum momentary DC output current	17A	
Rated output capacity	204W	
Efficiency	80%	80%
Rated input voltage (frequency)	AC100~115V (50/60Hz)	AC200~230V (50/60Hz)
Input voltage range	AC85~125V	AC170~250V
Input current	3.5A (100VAC, full load)	1.8A (200VAC, full load)
Output retention time	20 [msec] (at ambient temperature of 25°C and rated input/output conditions)	
Protective circuit	Overcurrent protection, overvoltage protection, overheat protection, overload protection	
Parallel operation	Supported	
Ambient operating temperature	0~50°C (subject to derating)	
Ambient operating humidity	30~85% RH (non-condensing)	
Cooling method	Natural air cooling	
Breakdown voltage	Between input and output --- 2.0kVA, 1 minute (20mA) Between input and enclosure --- 2.0kVA, 1 minute (20mA)	
Insulation resistance	Between output and enclosure --- 100MΩ min. at 500VDC	
Circuit method	Externally excited fly-back converter	
Weight	Approx. 0.9kg	

External Dimensions

24-VDC Power Supply

PS-24

Note

- The PS-24 is not a constant-voltage power supply. Its output voltage changes in accordance with the load (the voltage will drop in accordance with the load factor). Therefore, do not connect the PS-24 to equipment other than IAI's actuators.
- Keep the maximum number of actuators operated in parallel to five. Do not use PS-24 and other power supplies together for parallel operation.
- Take note that the PS-24 does not support series operation.
- If multiple units are used side by side, provide a minimum clearance of approx. 20 mm between the adjacent units.
- The PS-24 is naturally cooled by air. Accordingly, when installing the PS-24 give full consideration to ensuring natural convection in order to prevent heat from collecting around the power supply.
- The enclosure of this product also serves as heat sink. Since the surface may be heated to very high temperatures, once the unit has been installed do not touch the enclosure to prevent burns.

I/O Signal Table (PIO Type)

Parameter (PIO pattern selection)	PIO pattern	Pin number
0	8-point type	A standard specification providing eight positioning points, plus a home return signal, zone signal, etc. (The parameter has been set to this pattern prior to the shipment.)
1	3-point type (solenoid valve type)	Simply turn ON three signals of ST0 to ST2 to move the actuator to the corresponding positions (0 to 2), just like you do with solenoid valves. (This allows for easy conversion from air cylinders.)
2	16-point type (zone signal type)	Up to 16 positioning points can be set. (Same as the 8-point type, except that this pattern provides no home return signal.)
3	16-point type (position zone signal type)	A 16-point pattern with a position zone signal instead of a zone signal.

Pin number	Category	Wire color	Parameter (PIO pattern selection)			
			0	1	2	3
			Conventional type	3-point type (solenoid valve type)	16-point type (zone signal type)	16-point type (position zone signal type)
1A	SIO	Orange (red 1)	SGA			
1B		Orange (black 1)	SGB			
2A	24V	Light blue (red 1)	EMS1			
2B	0V	Light blue (black 1)	EMS2			
3A	24V	White (red 1)	24V			
3B	0V	White (black 1)	BLK			
4A	24V	Yellow (red 1)	MPI			
4B	0V	Yellow (black 1)	GND			
5A	24V	Pink (red 1)	MPI			
5B	0V	Pink (black 1)	GND			
6A	Input	Orange (red 2)	PC1	ST0	PC1	PC1
6B		Orange (black 2)	PC2	ST1	PC2	PC2
7A		Light blue (red 2)	PC4	ST2	PC4	PC4
7B		Light blue (black 2)	HOME	-	PC8	PC8
8A	Output	White (red 2)	CSTR	RES	CSTR	CSTR
8B		White (black 2)	*STP	*STP	*STP	*STP
9A		Yellow (red 2)	PEND	PE0	PEND	PEND
9B		Yellow (black 2)	HEND	PE1	HEND	HEND
10A		Pink (red 2)	ZONE	PE2	ZONE	PZONE
10B		Pink (black 2)	*ALM			

(Note) The signals denoted by an asterisk (*) (ALM/STP) are negative-logic signals that always remain ON.

System Configuration

Category	Signal name	Abbreviation	Function overview
SIO	Serial communication	SGA SGB	Used in serial communication.
24V 0V	Emergency stop	EMS1 EMS2	These signals are wired to enable the emergency stop switch on the teaching pendant. (Refer to p. 301)
	Brake release	BKR	Connection to 0 V forcibly releases the brake. (150 mA is required)
Input	Command position number	PC1 PC2 PC4 PC8	Specify a target position number using 4-bit binary signals (or 3-bit binary signals if the 8-point PIO pattern is selected). (Example) Position 3 → Input PC1 and PC2. Position 7 → Input PC1, PC2 and PC4.
	Position movement	ST0 ST1 ST2	Turn the ST0 signal ON to move the actuator to position 0. Same for ST1 and ST2. (Operation can be started with these signals alone. No need to input a start signal.)
	Home return	HOME	Home-return operation starts at the leading edge of this signal.
	Start	CSTR	Input a command position number signal and turn this signal ON, and the actuator will start moving to the specified position.
	Pause	*STP	This signal is always ON while the actuator is operating normally (negative logic). The actuator starts to decelerate to a stop at the ON → OFF leading edge of this signal.
	Position complete	PEND	This signal turns ON once the actuator has moved to the target position and completed the positioning by entering the specified positioning band. Used to determine if positioning has completed.
Output	Completed position number	PE0 PE1 PE2	PE0 is output upon completion of movement to position 0. Same for PE1 and PE2. (These signals are valid only when the 3-point PIO pattern is selected.)
	Home return complete	HEND	This signal turns ON upon completion of home return.
	Zone	ZONE	This signal turns ON upon entry into the zone signal range set by parameters.
	Position zone	PZONE	This signal turns ON upon entry into the zone signal range set by position data.
	Alarm	*ALM	This signal remain ON in normal conditions and turns OFF upon generation of an alarm (negative logic). Synchronized with the LED at the top of the motor cover. (A green light stays on in normal conditions, and a red light comes on upon generation of an alarm.)

(Note) The signals denoted by an asterisk (*) (ALM/STP) are negative-logic signals that always remain ON.

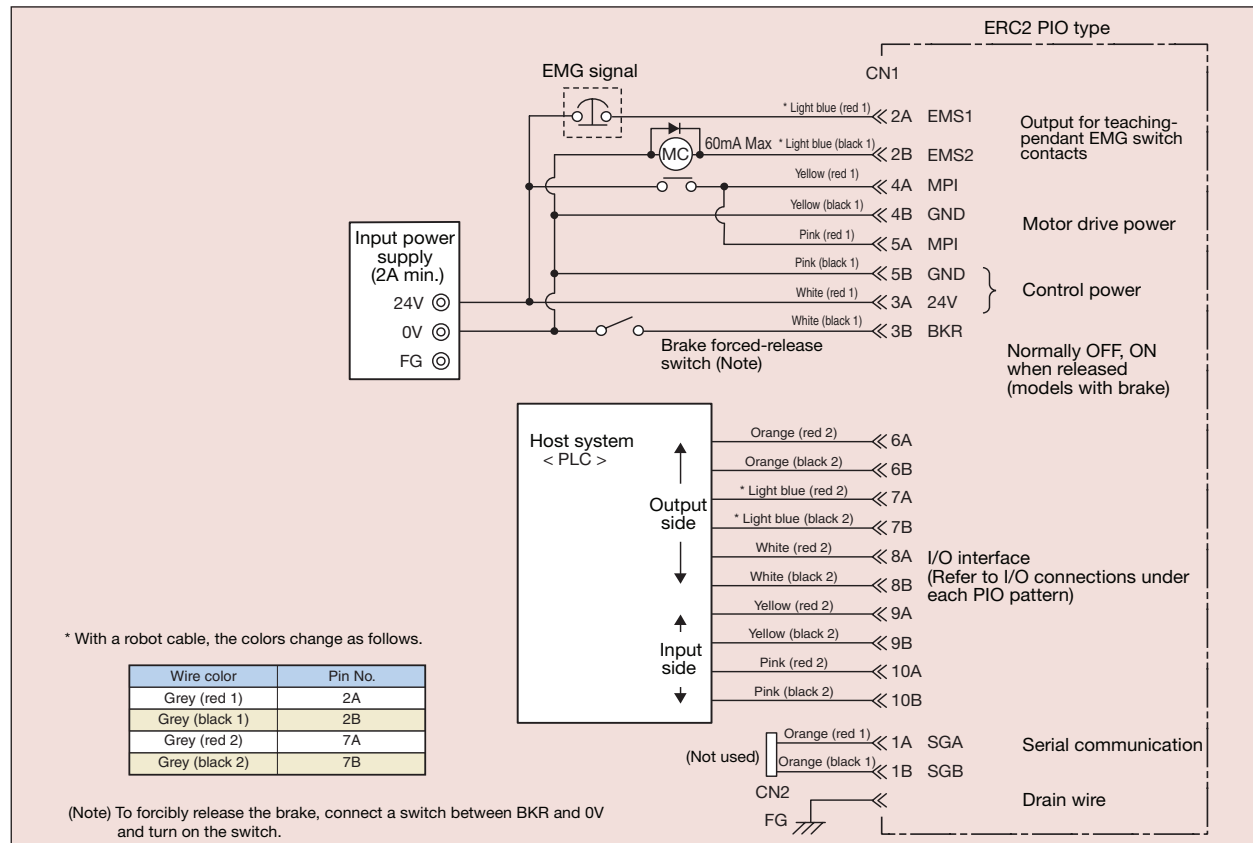

Specification Table

Specification item	Description	
Type	PIO specification (NP/PN)	SIO specification (SE)
Control method	Field-weakening vector control (patent pending)	
Positioning command	Position number specification	Position number specification/direct numerical specification
Position numbers	Maximum 16 points	Maximum 64 points
Backup memory	Position number data and parameters are stored in nonvolatile memory. Serial EEPROM with a rewrite life of 100,000 times.	
PIO	6 dedicated input points / 4 dedicated output points	None
Electromagnetic brake	Built-in circuit, 24VDC \pm 10%, 0.15A max.	
2-color LED indicator	Servo ON (green), alarm/motor drive-power cutoff (red)	
I/F power supply (Note 1)	Same as the control power supply (not insulated)	
Serial communication	RS485, 1 channel (terminated externally)	
Absolute function	None	
Forced release of electromagnetic brake	Forcibly released upon connection to 0V (NP) or 24V (PN)	Forcibly released upon connection to 24V
Cable length	I/F cable: 10m max. SIO connector communication cable: 5m max.	
Dielectric strength voltage	DC500V 10M Ω	
EMC	EN55011 Class A Group1 (3m)	
Power-supply voltage	24V \pm 10%	
Power-supply current	2A max.	
Environment	Ambient operating temperature	0~40°C
	Ambient operating humidity	85% RH or below (non-condensing)
	Operating ambience	Free from corrosive gases
Protection class	IP20	

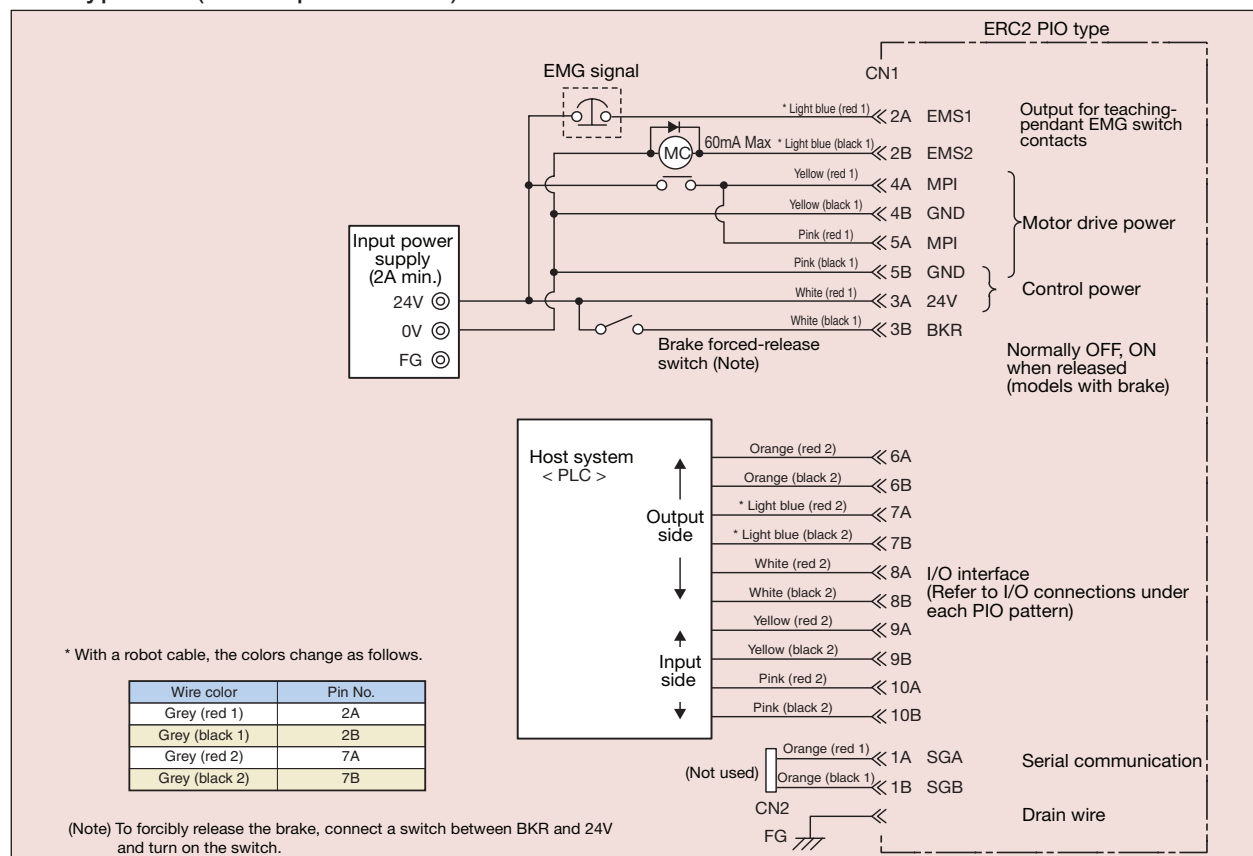

(Note 1) Use an insulated PIO terminal block (optional, refer to p. 302) to insulate the I/F power supply.

I/O Wiring Diagram

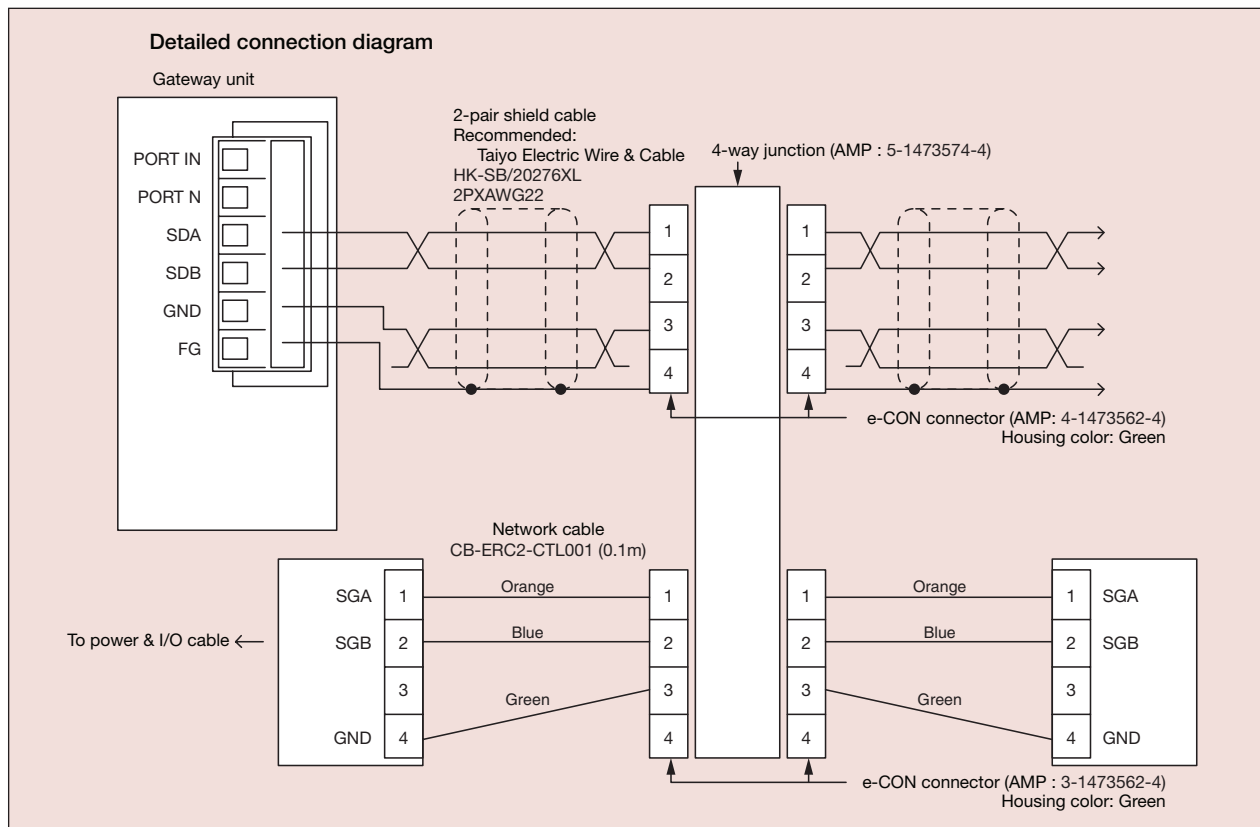

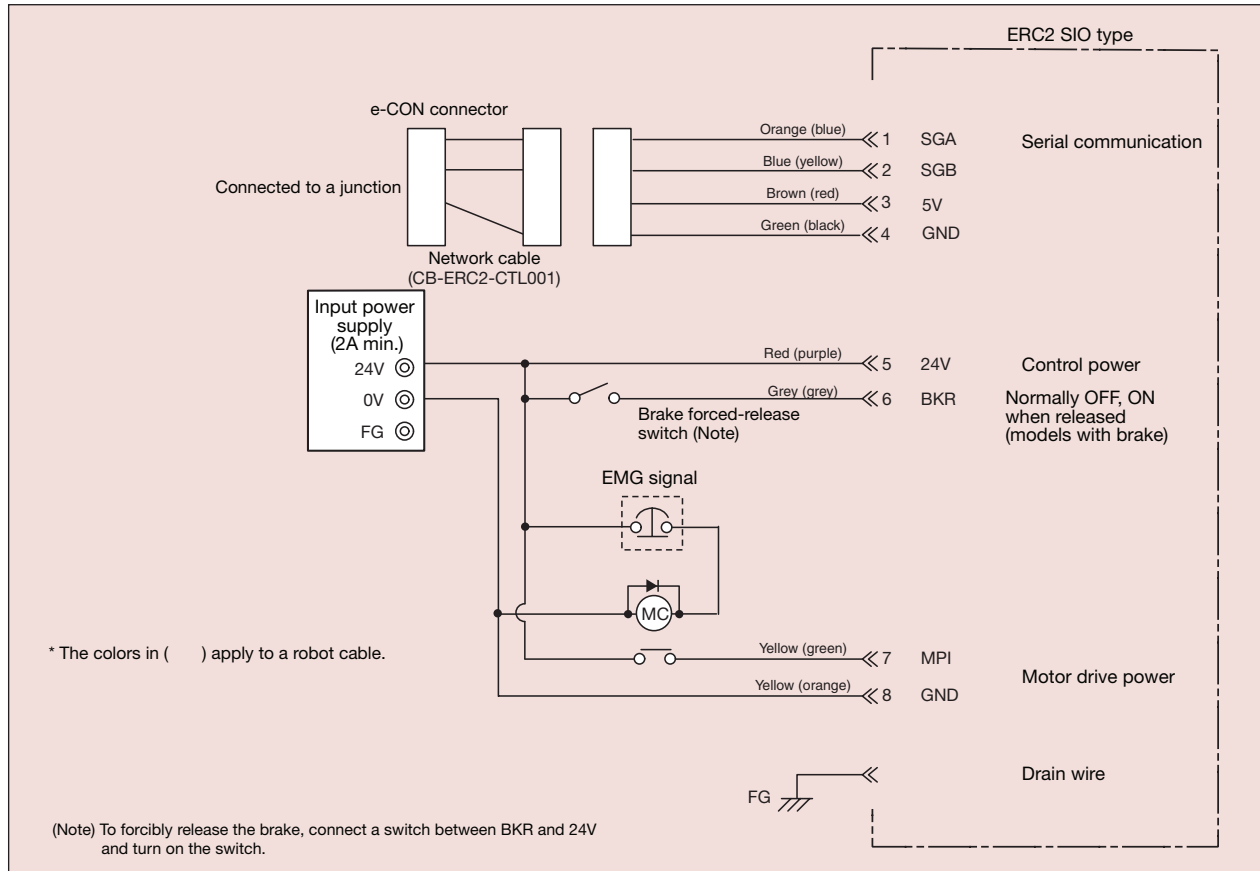

PIO Type NP (NPN Specification)

PIO Type NP (PNP Specification)

SIO Type SE

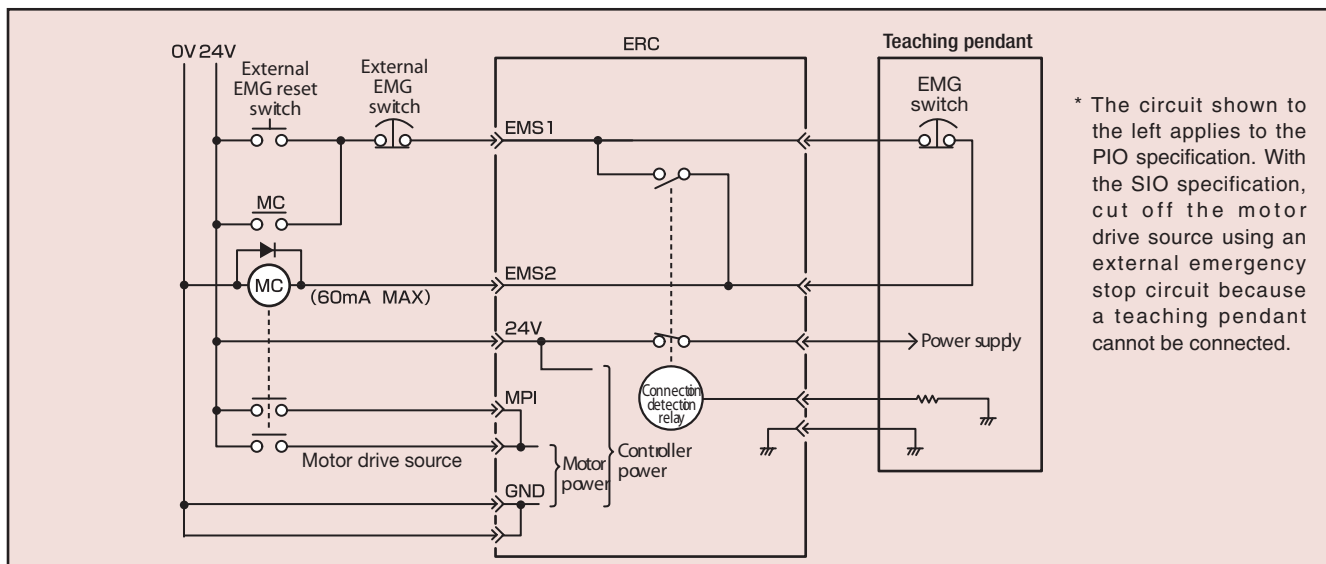

Emergency Stop Circuit

The ERC2 series has no built-in emergency stop circuit, so the customer must provide an emergency stop circuit based on the logic explained below. (The circuit below is simplified for explanation purpose. Provide a ready circuit, etc., according to your specification.)

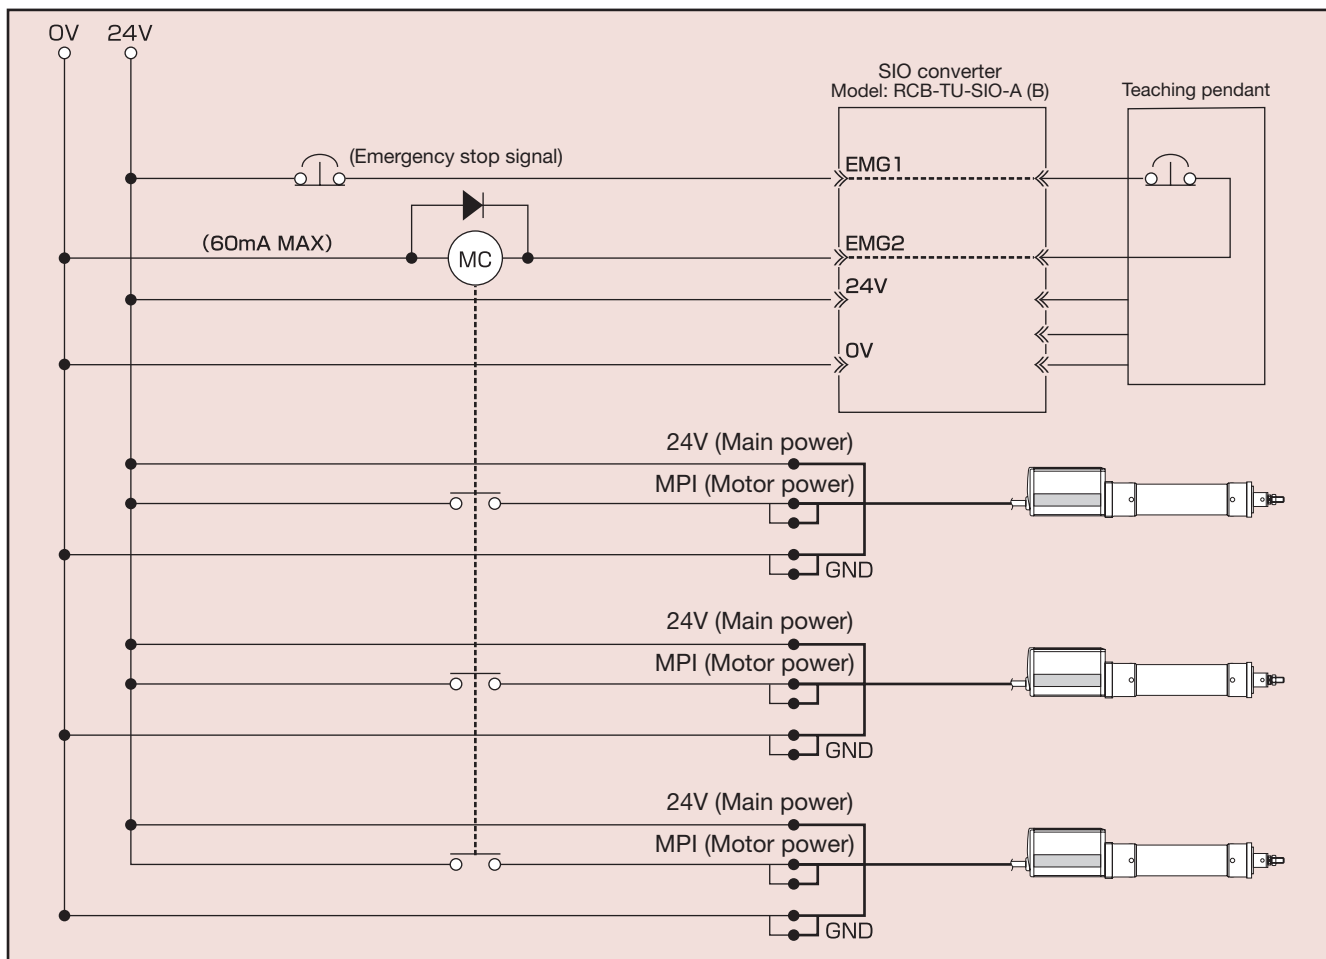

Single Axis

To provide an emergency stop circuit for a single-axis configuration, operate a relay using the EMS1 and EMS2 contacts of the power & I/O cable to cut off MPI (motor power).

Multiple Axes

To provide an emergency stop circuit for a multiple-axis configuration, operate a relay using the EMG1 and EMG2 contacts of the SIO converter to cut off MPI (motor power) for each axis.

Options

Insulated PIO Terminal Block

This terminal block is used to insulate the I/O power or simplify the wiring with a PLC.

* When a terminal block is used, the optional power & I/O cable with connectors on both ends must be used.

- Features
- The input/output ports are non-polar, so the I/O specification of the PLC can be either NPN or PNP.
 - An input/output-signal monitor LED is equipped to check the ON/OFF status of signals.

Specifications		Item	Specification
		Power-supply voltage	DC24V±10%
		Ambient operating temperature, humidity	0~55°C, 85% RH or below (non-condensing)
Input part		Number of input points	6 points
		Input voltage	DC24V±10%
		Input current	7mA/circuit (bipolar)
		Allowable leak current	1mA/point (approx. 2mA at normal temperature)
		Operating voltage (with respect to ground)	Input ON: Min16V (4.5mA) Input OFF: Max5V (1.3mA)
Output part		Number of output points	4 points
		Rated load voltage	DC24V
		Maximum current	60mA/point
		Residual voltage	2V max./60mA
		Short-circuit, overcurrent protection	Fuse resistance (27Ω, 0.1W)

Note

If you are using the ERC2-PN (PNP specification), use the RCB-TU-PIO-AP/BP (compatible with PNP specification).

Vertical Specification Model: RCB-TU-PIO-A/AP

Horizontal Specification Model: RCB-TU-PIO-B/BP

Wiring Diagram

SIO Converter

This converter permits RS232 communication by connecting the serial communication line (SGA, SGB) of the power & I/O cable and using a D-sub, 9-pin crossing cable for PC connection.

- Features
- The connection port for teaching-pendant or PC cable can be installed at any position away from the actuator.
 - Multiple axes can be connected and operated from a PC via serial communication.

Specifications		Item	Specification
		Power-supply voltage	DC24V±10%
		Ambient operating temperature, humidity	0~55°C, 85% RH or below (non-condensing)
		Terminal resistor	120Ω(built-in)

Vertical Specification Model: RCB-TU-SIO-A

Horizontal Specification Model: RCB-TU-SIO-B

Wiring Diagram

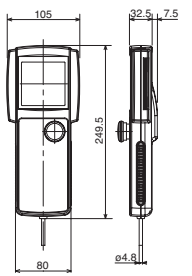

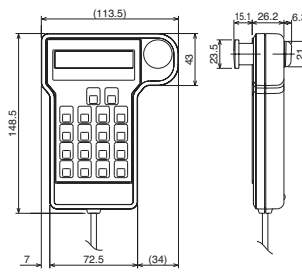

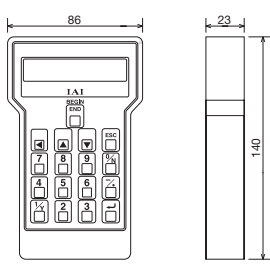

*1 With the SIO specification, a network cable is used to connect to a SIO converter.

Options

Teaching Pendant

An input device that provides all functions you need for trial operation and adjustment, such as position data input, test operation, as well as monitoring of current axis positions and input/output signals.

Name	Teaching Pendant	Simple teaching pendant	Data setting unit
Model	RCM-T (standard specification) RCM-TD (with deadman switch *1)	RCM-E	RCM-P
Standard price	—	—	—
External view			
Features	A standard, user-friendly teaching pendant equipped with a large LCD screen. A deadman switch type ensuring added safety is also available.	An economical type offering the same functions as the RCM-T at a substantially lower price.	An affordable data setting unit that provides all editing functions other than those relating to axis operation. * This unit does not support operations relating to axis movement.
Display	21 characters x 16 lines on LCD	16 characters x 2 lines on LCD	16 characters x 2 lines on LCD
Weight	Approx. 550g	Approx. 400g	Approx. 360g
Cable length	5m	5m	5m
Ambient operating temperature, humidity	Temperature: 0~40°C, Humidity: 85% RH or below		
External dimensions			

*1 The deadman switch is a safety switch that cuts off the drive source when released to disable operation.

PC Software

A software program that helps input position data and perform test operation. It significantly facilitates debugging operation by offering wide-ranging functions including jogging, inching, step operation and continuous operation.

Position controller
for RCP2 series

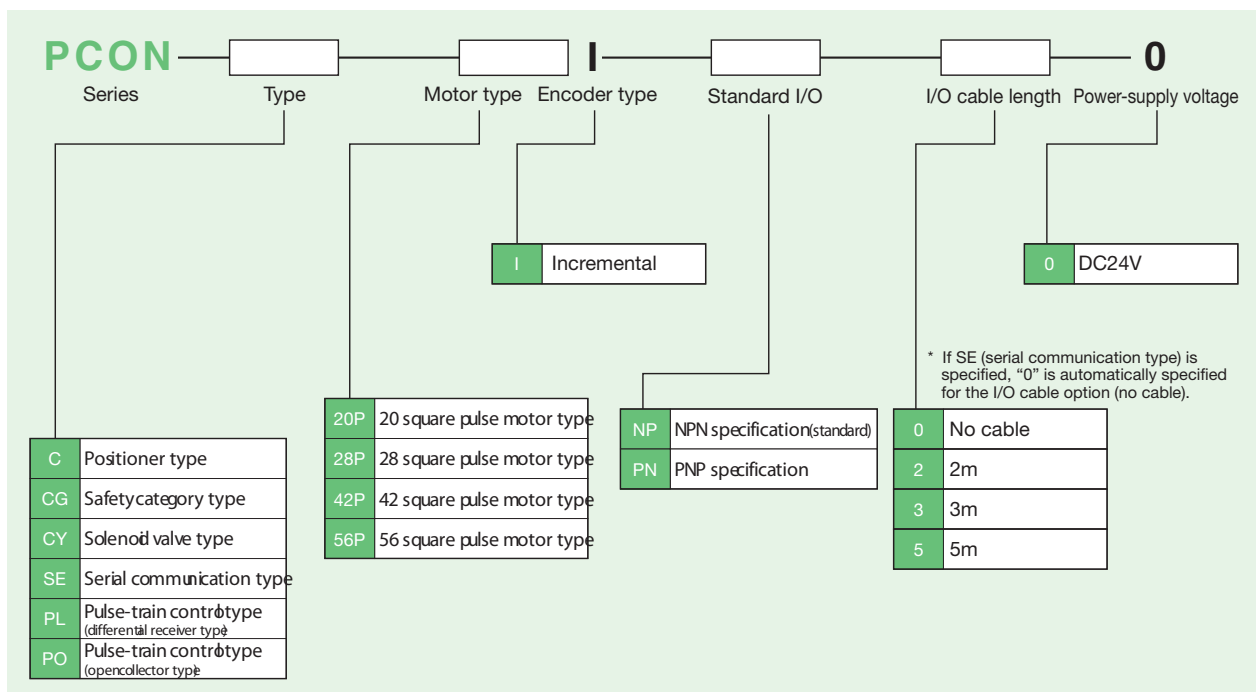

Type List

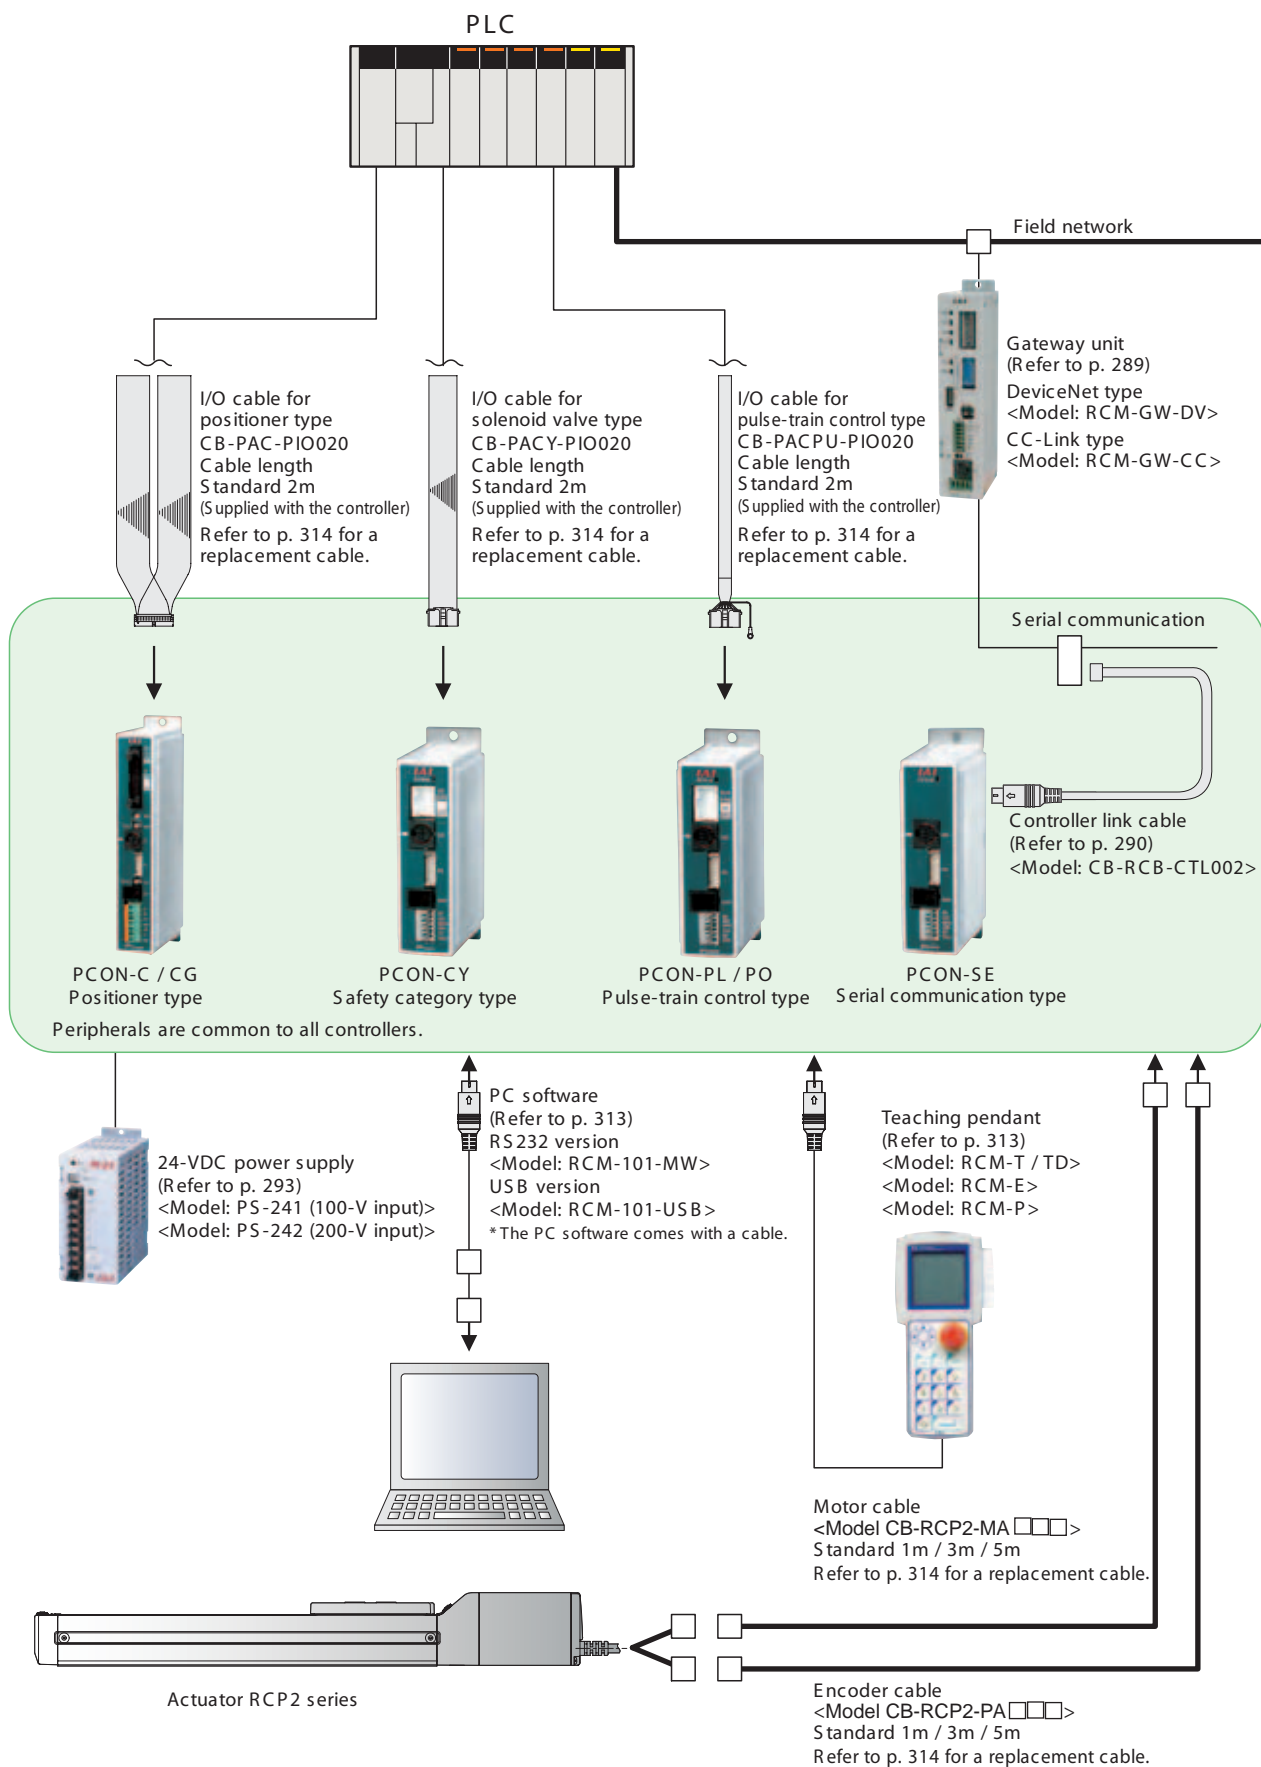

Position controller capable of operating RCP2 series actuator. Select from five types each supporting a different control mode.

Type	C	CG	CY	PL / PO	SE
Name	Positioner type	Safety category type	Solenoid valve type	Pulse-train control type	Serial communication type
External view					
Description	Positioner supporting up to 512 positioning points	C type conforming to safety category	Same control actions as those used on air cylinders	Controller for pulse-train control	Network controller
Number of position points	512 points	512 points	3 points	—	64 points
	—	—	—	—	—

Output Part External output specifications

Item	Specification
Load voltage	DC24V
Maximum load current	50mA/point
Residual voltage	2V max.
Insulation method	Photocoupler

NPN specification

PNP specification

I/O Specifications

The four controller types (C/CG, CY, PL/PO and SE) are differentiated by their I/O specifications. Since the positioner type and solenoid valve type allow the I/O signal settings to be changed through the controller, multiple functions can be provided for selection as needed.

Controller Functions by Type

Type	C / CG	CY	PL / PO	SE	Features
Name	Positioner type	Solenoid valve type	Pulse-train control type	Serial communication type	
Positioner mode	○	○	×	×	A basic operation mode in which the actuator is operated by specifying a position number and then inputting a start signal.
Teaching mode	○	×	×	×	In this mode, the slider (rod) can be moved by means of an external signal to store the achieved position as position data.
Solenoid valve mode	○	○	×	×	The actuator can be moved simply by ON/OFF of position signals. This mode supports the same control actions you are already familiar with on solenoid valves of air cylinders.
Pulse train mode	×	×	○	×	In this mode, you can operate the actuator freely using pulse trains without inputting position data.
Network support	○	○	×	○	The controller can be connected to a DeviceNet or CC-Link network using a gateway unit.

Explanation of I/O Signal Functions

The table below explains the functions assigned to the respective I/O signals of the controller. Since the signals that can be used vary depending on the controller type and settings, check the signal table for each controller to confirm the available functions.

Controller Functions by Type

Category	Abbreviation	Signal name	Function description
Input	CSTR	PTP strobe signal (start signal)	Input this signal to cause the actuator to start moving to the position set by the command position number signal.
	PC1~PC256	Command position number signal	This signal is used to input a target position number (binary input).
	BKRL	Brake forced-release signal	This signal forcibly releases the brake.
	RMOD	Running mode switching signal	This signal can switch the running mode when the MODE switch on the controller is set to AUTO (AUTO when this signal is OFF, or MANU when the signal is ON).
	* STP	Pause signal	Turning this signal OFF causes the moving actuator to decelerate to a stop. The actuator will resume the remaining movement if the signal is turned OFF during the pause.
	RES	Reset signal	Turning this signal ON resets the alarms that are present. If this signal is turned ON while the actuator is paused (*STP is OFF), the remaining movement can be cancelled.
	SON	Servo ON signal	The servo remains on while this signal is ON, or off while the signal is OFF.
	HOME	Home return signal	Turning this signal ON performs home-return operation.
	MODE	Teaching mode signal	Turning this signal ON switches the controller to the teaching mode (provided that CSTR, JOG+ and JOG- are all OFF and the actuator is not moving).
	JISL	Jog/inching switching signal	The actuator can be jogged with JOG+ and JOG- while this signal is OFF. The actuator performs inching operation with JOG+ and JOG- while this signal is ON.
	JOG+ JOG-	-----	----
	PWRT	Teaching signal	In the teaching mode, specify a desired position number and then turn this signal ON for at least 20 ms to write the current position under the specified position number.
	ST0~ST6	Start position command	Turning this signal ON in the solenoid valve mode causes the actuator to move to the specified position. (Start signal is not required.)
	TL	Torque limit selection signal	While this signal is ON, torque is limited by the value set by a parameter. The TLR signal turns ON if torque has reached the specified value.
	DCLR	Deviation counter clear signal	The position deviation counter is continuously cleared while this signal is ON.
Output	PEND/INP	Position complete signal	This signal turns ON when the actuator has entered the positioning band after movement. If the actuator has exceeded the positioning band, PEND does not turn OFF, but INP does. PEND and INP can be swapped using a parameter.
	PM1~PM256	Completed position number signal	This signal is used to output the position number achieved at completion of positioning (binary output).
	HEND	Home return complete signal	This signal turns ON upon completion of home return.
	ZONE1	Zone signal	This signal turns ON when the current actuator position has entered the range specified by parameters.
	PZONE	Position zone signal	This signal turns ON when the current actuator position has entered the range specified by position data during position movement. PZONE can be used together with ZONE1, but PZONE is valid only during movement to a specified position.
	RMDS	Running mode status signal	This signal is used to output the running mode status.
	* ALM	Controller alarm status signal	This signal remains ON while the controller is normal, and turns OFF if an alarm has generated.
	MOVE	Moving signal	This signal remains ON while the actuator is moving (including the periods during home return and push-motion operation).
	SV	Servo ON status signal	This signal remains ON while the servo is on.
	* EMGS	Emergency stop status signal	This signal remains ON while the controller is not in the emergency stop mode, and turns OFF once an emergency stop has been actuated.
	MODES	Mode status signal	This signal turns ON when the controller has switched to the teaching mode via MODE signal input. It turns OFF upon returning to the normal mode.
	WEND	Write complete signal	This signal remains OFF after the controller has switched to the teaching mode. It turns ON upon completion of data write using the PWRT signal. If the PWRT signal is turned OFF, this signal also turns OFF.
	PE0~PE6	Current position number signal	This signal turns ON after the controller has completed moving to the target position in the solenoid valve mode.
	TLR	Torque limiting signal	This signal turns ON once the motor torque has reached the specified value in a condition where torque is being limited by the TL signal.
	LSO~LS2	Limit switch output signal	Each signal turns ON when the current actuator position has entered the positioning band before or after the target position. If the actuator has already completed home return, these signals are output even before a movement command is issued or while the servo is OFF.
	TRQS	Torque level status signal	This signal outputs when the current value of the motor reaches the limitation value, before the JOG operation returns to the starting point and the slider (rod) collides to the mechanical end or an obstacle.

I/O Signal Table

■ Positioner type (PCON-C / CG)

Pin number	Category	Number of positioning points	Parameter (PIO pattern) selection

Wiring Diagram for Pulse-Train Input Type

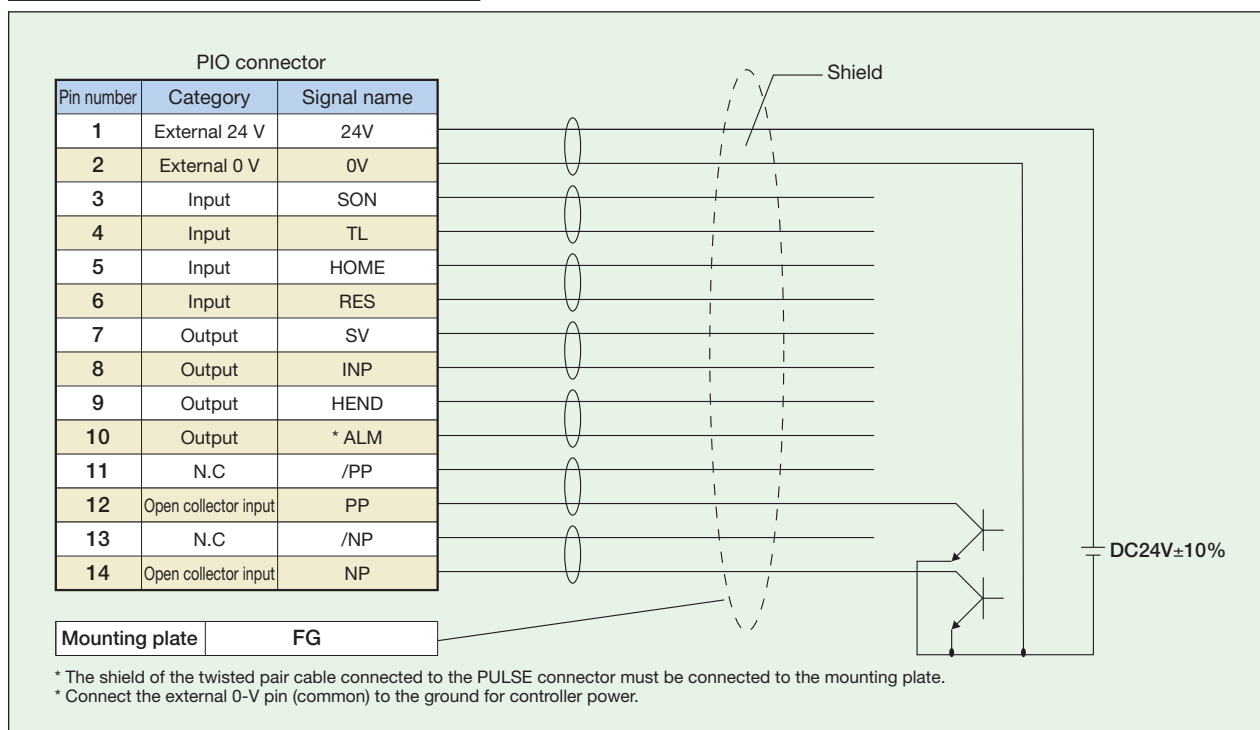

■ Differential Receiver Method (PCON-PL)

Maximum input pulse frequency : MAX 200kpps
 Cable length : MAX 10m

■ Open Collector Method (PCON-PO)

Maximum input pulse frequency : MAX 60kpps
 Cable length : MAX 2m

Command Pulse Input Patterns

Command pulse train pattern		Input terminal	Forward	Reverse
Negative logic	Forward pulse train	PP • /PP		
	Reverse pulse train	NP • /NP		
	Forward pulse trains and reverse pulse trains indicate the motor revolutions in forward direction and reverse direction, respectively.			
	Pulse train	PP • /PP		
	Sign	NP • /NP	Low	High
	Command pulses indicate the motor revolutions, while the sign of the command indicates the rotating direction.			
	Phase-A/B pulse train	PP • /PP		
		NP • /NP		
	Phase-A/B (x4) pulses with a 90° phase difference specify both the revolutions and rotating direction.			
	Forward pulse train	PP • /PP		
Positive logic	Reverse pulse train	NP • /NP		
	Pulse train	PP • /PP		
	Sign	NP • /NP	High	Low
	Phase-A/B pulse train	PP • /PP		
		NP • /NP		

Specification Table

Item	Specification					
Controller type	C	CG	CY	PL	PO	SE
Connectable actuators	RCP2 series actuator (Note 1)					
Number of controlled axes	1 axis					
Operation method	Positioner type		Solenoid valve type	Pulse-train control type		Serial communication type
Number of positioning points	512 points		3 points	—		64 points
Backup memory	EEPROM					
I/O connector	40-pin connector		12-pin connector	14-pin connector		None
Number of I/O points	16 input points / 16 output points		4 input points / 6 output points	4 input points / 4 output points		None
I/O power supply	Externally supplied 24VDC ± 10%					
Serial communication	RS485 1ch					
Peripheral communication cable	CB-PAC-PIO □□□		CB-PACY-PIO □□□	CB-PACPU-PIO □□□		CB-RCB-CTL002
Command pulse-train input method	—			Differential line driver	Open collector	—
Maximum input pulse frequency (Note 2)	—			Max 200kpps	Max 60kpps	—
Position detection method	Incremental encoder					
Drive-source cutoff relay at emergency stop	Built-in	External				
Forced release of electromagnetic brake	Brake release switch ON/OFF		BK-release terminal signal ON/OFF on power connector			
Motor cable	CB-RCP2-MA □□□ (20m max.)					
Encoder cable	CB-RCP2-PA □□□ (20m max.)					
Input power supply	DC24V±10%					
Power-supply capacity	2A max.					
Dielectric strength voltage	DC500V 1MΩ					
Vibration resistance	XYZ directions	10~57Hz One-side amplitude 0.035mm (continuous), 0.075mm (intermittent) 58~150Hz 4.9m/s2 (continuous), 9.8m/s2 (intermittent)				
Ambient operating temperature	0~40°C					
Ambient operating humidity	10~95% (non-condensing)					
Operating ambience	Free from corrosive gases					
Protection class	IP20					
Weight	Approx. 300g		Approx. 130g			

(Note 1) The high-thrust type (RFA), high-speed type (HS8C/HS8R) and waterproof type (RCP2W-SA16) cannot be operated.
(Note 2) With the open collector specification, keep the maximum input frequency to 60 kpps or below to prevent malfunction.

External Dimensions

Name of Each Part

C / CG type

CY / PL / PO type

SE type

* PIO connector pins
CY: 12 pins
PL/PO: 14 pins

Blinking (green) LED indicators

These LED indicate the condition of the controller.

Unlit Servo on Lit (red) Alarm present Lit (green) Servo off 1 Automatic servo-off mode

2 PIO connector

Connect a cable for communicating with a PLC or other external equipment.

3 Address-setting rotary switch

This switch is used to set the address of each controller when multiple controllers are linked.

4 Mode switch

This switch is used to switch between teaching operation (MANU) and automatic operation (AUTO).

Operation details

MANU	I/O commands are not accepted. Data can be written from a teaching pendant.
AUTO	I/O commands are valid, while operations from a teaching pendant are not accepted. Monitoring is possible.

5 SIO connector

Connect a teaching-pendant or PC cable, or a controller to connect to a gateway unit.

Operation details

Pin number	Signal	Pin	Remarks
1	SGA	RS485 differential signal+	
2	SGB	RS485 differential signal-	
3	5V	+5-V output	For RS232/485 conversion
4	ENBL	Enable signal	
5	EMGA	EMG line connection to external equipment	
6	24V	24-V power for T/P	For T/P
7	0V	Ground	
8	EMGB	EMG line connection to external equipment	
9	0V	Ground for EMG line connection to external equipment	

6 Encoder/brake connector

Connect the encoder/brake cables of the actuator.

7 Brake release switc

A switch to forcibly release the brake

8 Motor connector

Connect the motor cable of the actuator.

9 Power terminal block

Supplies the main controller power and actuates an emergency stop.

C/CG types

Pin number	Signal Name	Name
7	S1	TP_EMG external drive-source cutoff terminal
6	S2	
5	MPI	Motor drive-source cutoff terminal
4	MPO	Motor drive-source cutoff terminal
3	24V	Positive side of the 24-V power supply
2	0V	Negative side of the 24-V power supply
1	EMG	EMG signal (application of 24 V)

CY / PL / PO / SE types

Pin number	Signal Name	Name
6	BK	Brake release
5	MPI	Motor drive-source cutoff terminal
4	MPO	Motor drive-source cutoff terminal
3	24V	Positive side of the 24-V power supply
2	0V	Negative side of the 24-V power supply
1	EMG	EMG signal (application of 24 V)

I/O Specifications

The four controller types (C/CG, CY, PL/PO and SE) are differentiated by their I/O specifications. Since the positioner type and solenoid valve type allow the I/O signal settings to be changed through the controller, multiple functions can be provided for selection as needed.

Controller Functions by Type

Type	C / CG	CY	PL / PO	SE	Features
Name	Positioner type	Solenoid valve type	Pulse-train control type	Serial communication type	
Positioner mode	○	○	×	×	A basic operation mode in which the actuator is operated by specifying a position number and then inputting a start signal.
Teaching mode	○	×	×	×	In this mode, the slider (rod) can be moved by means of an external signal to store the achieved position as position data.
Solenoid valve mode	○	○	×	×	The actuator can be moved simply by ON/OFF of position number signals. This mode makes it easy to convert applications previously using air cylinders with solenoid valves.
Pulse train mode	×	×	○	×	You can operate the actuator freely according to your control needs, without inputting position data.
Network support	○	○	×	○	The controller can be connected to a network via a gateway unit and serial communication function.

Explanation of I/O Signal Functions

The table below explains the functions assigned to the respective I/O signals of the controller. Since the signals that can be used vary depending on the controller type and settings, check the signal table for each controller to confirm the available functions.

Controller Functions by Type

Category	Abbreviation	Signal name	Function description
Input	CSTR	PTP strobe signal (start signal)	Input this signal to cause the actuator to start moving to the position set by the command position number signal.
	PC1~PC256	Command position number signal	This signal is used to input a target position number (binary input).
	BKRL	Brake forced-release signal	This signal forcibly releases the brake.
	RMOD	Running mode switching signal	This signal can switch the running mode when the MODE switch on the controller is set to AUTO (AUTO when this signal is OFF, or MANU when the signal is ON).
	* STP	Pause signal	Turning this signal OFF causes the moving actuator to decelerate to a stop. The actuator will resume the remaining movement if the signal is turned OFF during the pause.
	RES	Reset signal	Turning this signal ON resets the alarms that are present. If this signal is turned ON while the actuator is paused (*STP is OFF), the remaining movement can be cancelled.
	SON	Servo ON signal	The servo remains on while this signal is ON, or off while the signal is OFF.
	HOME	Home return signal	Turning this signal ON performs home-return operation.
	MODE	Teaching mode signal	Turning this signal ON switches the controller to the teaching mode (provided that CSTR, JOG+ and JOG- are all OFF and the actuator is not moving).
	JISL	Jog/inching switching signal	The actuator can be jogged with JOG+ and JOG- while this signal is OFF. The actuator performs inching operation with JOG+ and JOG- while this signal is ON.
	JOG+ JOG-	-----	----
	PWRT	Teaching signal	In the teaching mode, specify a desired position number and then turn this signal ON for at least 20 ms to write the current position under the specified position number.
	ST0~ST6	Start position command	Turning this signal ON in the solenoid valve mode causes the actuator to move to the specified position. (Start signal is not required.)
	TL	Torque limit selection signal	While this signal is ON, torque is limited by the value set by a parameter. The TLR signal turns ON if torque has reached the specified value.
	DCLR	Deviation counter clear signal	The position deviation counter is continuously cleared while this signal is ON.
Output	PEND/INP	Position complete signal	This signal turns ON when the actuator has entered the positioning band after movement. If the actuator has exceeded the positioning band, PEND does not turn OFF, but INP does. PEND and INP can be swapped using a parameter.
	PM1~PM256	Completed position number signal	This signal is used to output the position number achieved at completion of positioning (binary output).
	HEND	Home return complete signal	This signal turns ON upon completion of home return.
	ZONE1	Zone signal	This signal turns ON when the current actuator position has entered the range specified by parameters.
	PZONE	Position zone signal	This signal turns ON when the current actuator position has entered the range specified by position data during position movement. PZONE can be used together with ZONE1, but PZONE is valid only during movement to a specified position.
	RMDS	Running mode status signal	This signal is used to output the running mode status.
	* ALM	Controller alarm status signal	This signal remains ON while the controller is normal, and turns OFF if an alarm has generated.
	MOVE	Moving signal	This signal remains ON while the actuator is moving (including the periods during home return and push-motion operation).
	SV	Servo ON status signal	This signal remains ON while the servo is on.
	* EMGS	Emergency stop status signal	This signal remains ON while the controller is not in the emergency stop mode, and turns OFF once an emergency stop has been actuated.
	MODES	Mode status signal	This signal turns ON when the controller has switched to the teaching mode via MODE signal input. It turns OFF upon returning to the normal mode.
	WEND	Write complete signal	This signal remains OFF after the controller has switched to the teaching mode. It turns ON upon completion of data write using the PWRT signal. If the PWRT signal is turned OFF, this signal also turns OFF.
	PE0~PE6	Current position number signal	This signal turns ON after the controller has completed moving to the target position in the solenoid valve mode.
	TLR	Torque limiting signal	This signal turns ON once the motor torque has reached the specified value in a condition where torque is being limited by the TL signal.
	LSO~LS2	Limit switch output signal	Each signal turns ON when the current actuator position has entered the positioning band before or after the target position. If the actuator has already completed home return, these signals are output even before a movement command is issued or while the servo is OFF.
	TRQS	Torque level status signal	This signal outputs when the current value of the motor reaches the limitation value, before the JOG operation returns to the starting point and the slider (rod) collides to the mechanical end or an obstacle.

Wiring Diagram for Pulse-Train Input Type

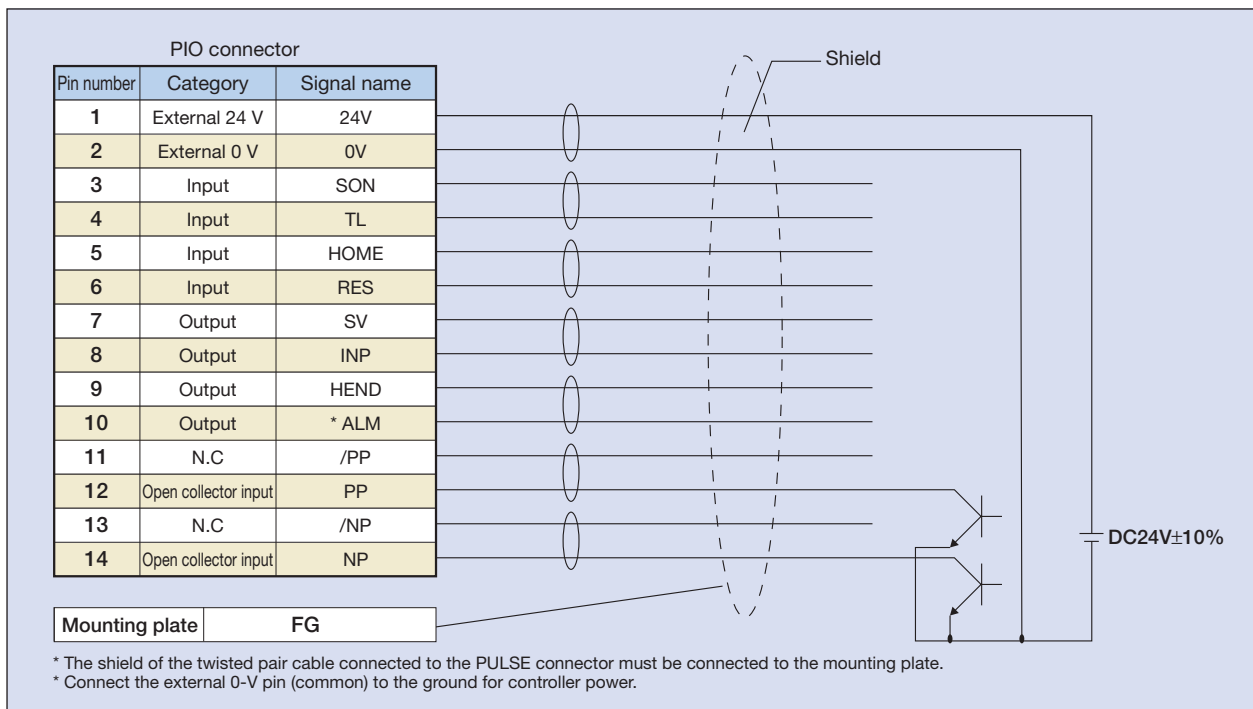

■ Differential Receiver Method (ACON-PL)

Maximum input pulse frequency : MAX 200kpps
Cable length : MAX 10m

■ Open Collector Method (ACON-PO)

Maximum input pulse frequency : MAX 60kpps
Cable length : MAX 2m

Command Pulse Input Patterns

Command pulse train pattern	Input terminal	Forward	Reverse
Forward pulse train	PP • /PP		
Reverse pulse train	NP • /NP		
Forward pulse trains and reverse pulse trains indicate the motor revolutions in forward direction and reverse direction, respectively.			
Pulse train	PP • /PP		
Sign	NP • /NP	Low	High
Command pulses indicate the motor revolutions, while the sign of the command indicates the rotating direction.			
Phase-A/B pulse train	PP • /PP		
	NP • /NP		
Phase-A/B (x4) pulses with a 90° phase difference specify both the revolutions and rotating direction.			
Forward pulse train	PP • /PP		
Reverse pulse train	NP • /NP		
Pulse train	PP • /PP		
Sign	NP • /NP	High	Low
Phase-A/B pulse train	PP • /PP		
	NP • /NP		

Specification Table

Item	Specification					
Controller type	C	CG	CY	PL	PO	SE
Connectable actuators	RCA series actuator					
Number of controlled axes	1 axis					
Operation method	Positioner type		Solenoid valve type	Pulse-train control type		Serial communication type
Number of positioning points	512 points		3 points	—		64 points

I/O connector	40-pin connector		12-pin connector	14-pin connector		None
Number of I/O points	16 input points / 16 output points		4 input points / 6 output points	4 input points / 4 output points		None
I/O power supply	Externally supplied 24VDC ± 10%					—
Serial communication	RS485 1ch					
Peripheral communication cable	CB-PAC-PIO □□□		CB-PACY-PIO □□□	CB-PACPU-PIO □□□		CB-RCB-CTL002
Command pulse-train input method	—			Differential line driver	Open collector	—
Maximum input pulse frequency (Note 1)	—			Max 200kpps	Max 60kpps	—
Position detection method	Incremental encoder					
Drive-source cutoff relay at emergency stop	Built-in	External				
Forced release of electromagnetic brake	Brake release switch ON/OFF		BK-release terminal signal ON/OFF on power connector			
Motor cable	CB-ACS-MA □□□ (20m max.)					
Encoder cable	CB-ACS-PA □□□ (20m max.)					
Input power supply	DC24V±10%					
Power-supply capacity	SA4 • SA5 20W (Rating 1.3A / Peak 5.1A) SA6 30W (Rating 1.3A / Peak 5.1A) RA3 20W (Rating 1.7A / Peak 5.1A) RA4 20W (Rating 1.3A / Peak 5.1A) RA4 30W (Rating 1.3A / Peak 5.1A)					
Dielectric strength voltage	DC500V 1MΩ					
Vibration resistance	XYZ directions		10~57Hz One-side amplitude 0.035mm (continuous), 0.075mm (intermittent) 58~150Hz 4.9m/s2 (continuous), 9.8m/s2 (intermittent)			
Ambient operating temperature	0~40°C					
Ambient operating humidity	10~95% (non-condensing)					
Operating ambience	Free from corrosive gases					
Protection class	IP20					
Weight	Approx. 300g		Approx. 130g			

(Note 1) With the open collector specification, keep the maximum input frequency to 60 kpps or below to prevent malfunction. Use a differential line driver if 60 kpps is exceeded.

External Dimensions

Name of Each Part

C / CG type

CY / PL / PO
type

SE
type

* PIO connector pins
CY: 12 pins
PL/PO: 14 pins

Blinking (green) LED indicators

These LED indicate the condition of the controller.

Unlit Servo on Lit (red) Alarm present Lit (green) Servo off **1** Automatic servo-off mode

2 PIO connector

Connect a cable for communicating with a PLC or other external equipment.

3 Address-setting rotary switch

This switch is used to set the address of each controller when multiple controllers are linked.

4 Mode switch

This switch is used to switch between teaching operation (MANU) and automatic operation (AUTO).

Operation details

MANU	I/O commands are not accepted. Data can be written from a teaching pendant.
AUTO	I/O commands are valid, while operations from a teaching pendant are not accepted. Monitoring is possible.

5 SIO connector

Connect a teaching-pendant or PC cable, or a controller to connect to a gateway unit.

Operation details

Pin number	Signal	Pin	Remarks
1	SGA	RS485 differential signal+	
2	SGB	RS485 differential signal-	
3	5V	+5-V output	For RS232/485 conversion
4	ENBL	Enable signal	
5	EMGA	EMG line connection to external equipment	
6	24V	24-V power for Teach pendant	For Teach pendant
7	0V	Ground	
8	EMGB	EMG line connection to external equipment	
9	0V	Ground for EMG line connection to external equipment	

6 Encoder/brake connector

Connect the encoder/brake cables of the actuator.

7 Brake release switch

A switch to forcibly release the brake

8 Motor connector

Connect the motor cable of the actuator.

9 Power terminal block

Supplies the main controller power and actuates an emergency stop.

C/CG types

Pin number	Signal Name	Name
7	S1	TP_EMG external drive-source cutoff terminal
6	S2	TP_EMG external drive-source cutoff terminal
5	MPI	Motor drive-source cutoff terminal
4	MPO	Motor drive-source cutoff terminal
3	24V	Positive side of the 24-V power supply
2	0V	Negative side of the 24-V power supply
1	EMG	EMG signal (application of 24 V)

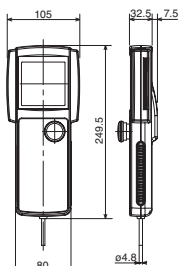

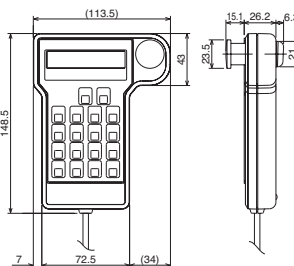

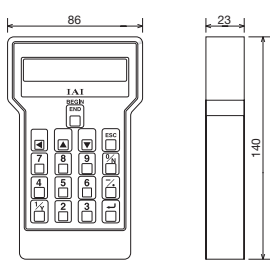

CY / PL / PO / SE types

Pin number	Signal Name	Name
6	BK	Brake release
5	MPI	Motor drive-source cutoff terminal
4	MPO	Motor drive-source cutoff terminal
3	24V	Positive side of the 24-V power supply
2	0V	Negative side of the 24-V power supply
1	EMG	EMG signal (application of 24 V)

Options

■ Teaching Pendant

An input device that provides all functions you need for trial operation and adjustment, such as position data input, test operation, as well as monitoring of current axis positions and input/output signals.

Name	Teaching Pendant	Simple teaching pendant	Data setting unit
Model	RCM-T (standard specification) RCM-TD (with deadman switch *1)	RCM-E	RCM-P
Standard price	—	—	—
External view			
Features	A standard, user-friendly teaching pendant equipped with a large LCD screen. A deadman switch type ensuring added safety is also available.	An economical type offering the same functions as the RCA-T at a substantially lower price.	An affordable data setting unit that provides all editing functions other than those relating to axis operation. * This unit does not support operations relating to axis movement.
Display	21 characters x 16 lines on LCD	16 characters x 2 lines on LCD	16 characters x 2 lines on LCD
Weight	Approx. 550g	Approx. 400g	Approx. 360g
Cable length	5m	5m	5m
Ambient operating temperature, humidity	Temperature: 0~40°C, Humidity: 85% RH or below		
External dimensions			

*1 The deadman switch is a safety switch that cuts off the drive source when released to disable operation.

■ PC Software

A software program that helps input position data and perform test operation. It significantly facilitates debugging operation by offering wide-ranging functions including jogging, inching, step operation and continuous operation.

■ RS232 Communication Type

Model RCM-101-MW

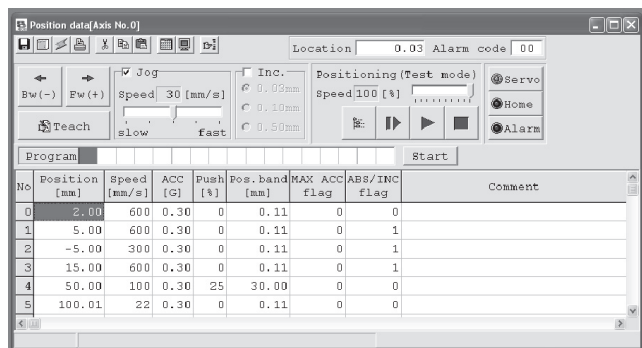

<Content>PC software (CD-ROM),
PC cable
(communication cable +
RS232 conversion unit)

■ USB Communication Type

Model RCM-101-USB

<Content>PC software (CD-ROM),
PC cable
(communication cable + USB
conversion unit + USB cable)

Spare Parts

Should you require spare parts after the purchase of your product for replacing the original cables, etc., refer to the model names specified below.

Motor Cable

Model **CB-ACS-MA**

* indicates the cable length (L). Lengths up to 20 m can be specified. Example) 080 = 8 m

Encoder Cable / Encoder Robot Cable

Model **CB-ACS-PA** / **CB-ACS-PA** -**RB**

* The standard encoder cable is a normal cable. indicates the cable length (L). Lengths up to 20 m can be specified. Example) 080 = 8 m
A robot cable can be specified as an option.

I/O Cable for Positioner Type (ACON-C/CG)

Model **CB-PAC-PIO**

* indicates the cable length (L). Lengths up to 20 m can be specified. Example) 080 = 8 m

I/O Cable for Solenoid Valve Type (ACON-CY)

Model **CB-PACY-PIO**

* indicates the cable length (L). Lengths up to 20 m can be specified. Example) 080 = 8 m

I/O Cable for Pulse-Train Control Type (ACON-PL/PO)

Model **CB-PACPU-PIO**

* indicates the cable length (L). Lengths up to 20 m can be specified. Example) 080 = 8 m

SCON

Position controller
for RCS2 series

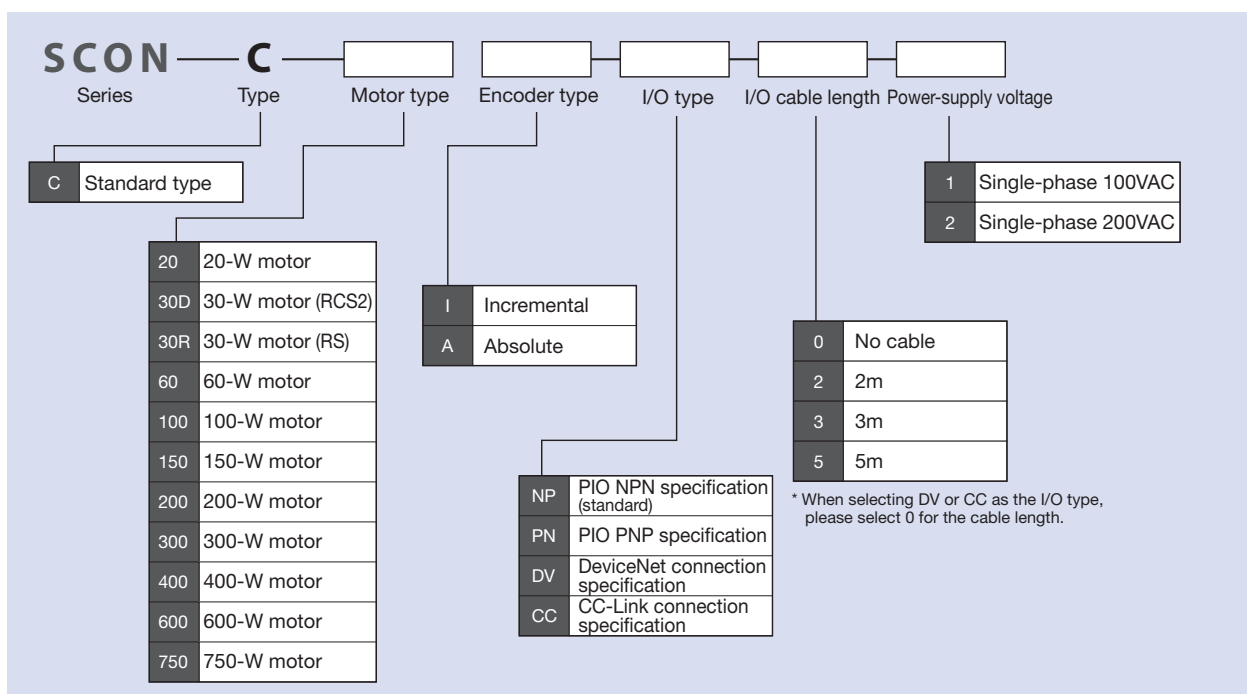

Type List

Position controller capable of operating RCP2 series actuator. Various control functions are combined into a single unit.

Type	C				
Name	Positioner mode	Solenoid valve mode	Pulse-train control mode	Network specification (DeviceNet)	Network specification (CC-Link)
External view					
Description	Positioner supporting up to 512 positioning points	Same control actions as those used on air cylinders	Controller for pulse-train control	DeviceNet connection specification (optional)	CC-Link connection specification (optional)
Number of position points	512 points	7 points	(-)	512 points	512 points
Type of I/O	NP/PN			DV	CC

Model

System Configuration

Pulse Converter **AK-04** (Optional)

Content: Pulse converter (AK-04) + e-CON input/output connector

Use this converter if pulses output from the host controller are of open collector specification.

This converter is used to convert the open-collector command pulses output from the host controller to differential pulses. Converting open collector pulses to differential pulses improves noise resistance.

Two phases of differential pulses equivalent to those from the line driver 26C31 are output.

The e-CON connector is used as an input/output connector to simplify the field wiring.

Basic specifications

- Input power supply: DC24V±10% (Max 50mA)
- Input pulses: Open collector (collector current 12mA max.)
- Input frequency: 200kHz max.
- Output pulses: 26C31-equivalent differential output (Max 10mA)
(Applicable wire: AWG 24~26, 0.14~0.3 mm² (max.)
Outer diameter of finished wire ø1.0~1.2mm)

I/O Specifications

Input Part External input specifications

Item	Specification
Input voltage	24VDC \pm 10%

NPN specification

PNP specification

I/O Specifications

The SCON-C supports all of the control methods shown below.

It supports a maximum of 512 positioning points in the positioner mode and up to seven points in the solenoid valve mode.

Controller Functions by Type

Type	SCON-C	Features
Positioner mode	<input type="radio"/>	A basic operation mode in which the actuator is operated by specifying a position number and then inputting a start signal.
Teaching mode	<input type="radio"/>	In this mode, the slider (rod) can be moved by means of an external signal to store the achieved position as position data.
Solenoid valve mode	<input type="radio"/>	The actuator can be moved simply by ON/OFF of position signals. This mode supports the same control actions you are already familiar with on solenoid valves of air cylinders.
Pulse train mode	<input type="radio"/>	In this mode, you can operate the actuator freely using pulse trains without inputting position data.
Network support	<input type="radio"/>	The controller can be connected directly to a field network by selecting an applicable network option.

Explanation of I/O Signal Functions

The table below explains the functions assigned to the respective I/O signals of the controller.

Since the signals that can be used vary depending on the controller type and settings, check the signal table for each controller to confirm the available functions.

Controller Functions by Type

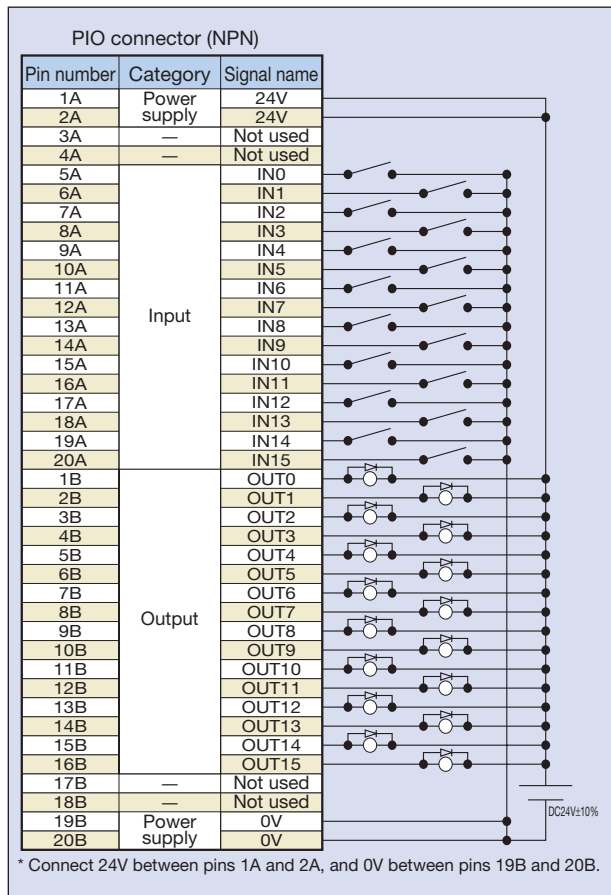

Category	Abbreviation	Signal name	Function description
Input	CSTR	PTP strobe signal (start signal)	Input this signal to cause the actuator to start moving to the position set by the command position number signal.
	PC1~PC256	Command position number signal	This signal is used to input a target position number (binary input).
	BKRL	Brake forced-release signal	This signal forcibly releases the brake.
	RMOD	Running mode switching signal	This signal can switch the running mode when the MODE switch on the controller is set to AUTO (AUTO when this signal is OFF, or MANU when the signal is ON).
	* STP	Pause signal	Turning this signal OFF causes the moving actuator to decelerate to a stop. The actuator will resume the remaining movement if the signal is turned OFF during the pause.
	RES	Reset signal	Turning this signal ON resets the alarms that are present. If this signal is turned ON while the actuator is paused (*STP is OFF), the remaining movement can be cancelled.
	SON	Servo ON signal	The servo remains on while this signal is ON, or off while the signal is OFF.
	HOME	Home return signal	Turning this signal ON performs home-return operation.
	MODE	Teaching mode signal	Turning this signal ON switches the controller to the teaching mode (provided that CSTR, JOG+ and JOG- are all OFF and the actuator is not moving).
	JISL	Jog/inching switching signal	The actuator can be jogged with JOG+ and JOG- while this signal is OFF. The actuator performs inching operation with JOG+ and JOG- while this signal is ON.
	JOG+ JOG-	-----	----
	PWRT	Teaching signal	In the teaching mode, specify a desired position number and then turn this signal ON for at least 20 ms to write the current position under the specified position number.
	ST0~ST6	Start position command	Turning this signal ON in the solenoid valve mode causes the actuator to move to the specified position. (Start signal is not required.)
	TL	Torque limit selection signal	While this signal is ON, torque is limited by the value set by a parameter. The TLR signal turns ON if torque has reached the specified value.
	DCLR	Deviation counter clear signal	The position deviation counter is continuously cleared while this signal is ON.
Output	PEND/INP	Position complete signal	This signal turns ON when the actuator has entered the positioning band after movement. If the actuator has exceeded the positioning band, PEND does not turn OFF, but INP does. PEND and INP can be swapped using a parameter.
	PM1~PM256	Completed position number signal	This signal is used to output the position number achieved at completion of positioning (binary output).
	HEND	Home return complete signal	This signal turns ON upon completion of home return.
	ZONE1	Zone signal	This signal turns ON when the current actuator position has entered the range specified by parameters.
	PZONE	Position zone signal	This signal turns ON when the current actuator position has entered the range specified by position data during position movement. PZONE can be used together with ZONE1, but PZONE is valid only during movement to a specified position.
	RMDS	Running mode status signal	This signal is used to output the running mode status.
	* ALM	Controller alarm status signal	This signal remains ON while the controller is normal, and turns OFF if an alarm has generated.
	MOVE	Moving signal	This signal remains ON while the actuator is moving (including the periods during home return and push-motion operation).
	SV	Servo ON status signal	This signal remains ON while the servo is on.
	* EMGS	Emergency stop status signal	This signal remains ON while the controller is not in the emergency stop mode, and turns OFF once an emergency stop has been actuated.
	MODES	Mode status signal	This signal turns ON when the controller has switched to the teaching mode via MODE signal input. It turns OFF upon returning to the normal mode.
	WEND	Write complete signal	This signal remains OFF after the controller has switched to the teaching mode. It turns ON upon completion of data write using the PWRT signal. If the PWRT signal is turned OFF, this signal also turns OFF.
	PE0~PE6	Current position number signal	This signal turns ON after the controller has completed moving to the target position in the solenoid valve mode.
	TLR	Torque limiting signal	This signal turns ON once the motor torque has reached the specified value in a condition where torque is being limited by the TL signal.
	LSO~LS2	Limit switch output signal	Each signal turns ON when the current actuator position has entered the positioning band before or after the target position. If the actuator has already completed home return, these signals are output even before a movement command is issued or while the servo is OFF.
	TRQS	---	-----

Wiring Diagram

■ Connection Diagram for Positioner Mode

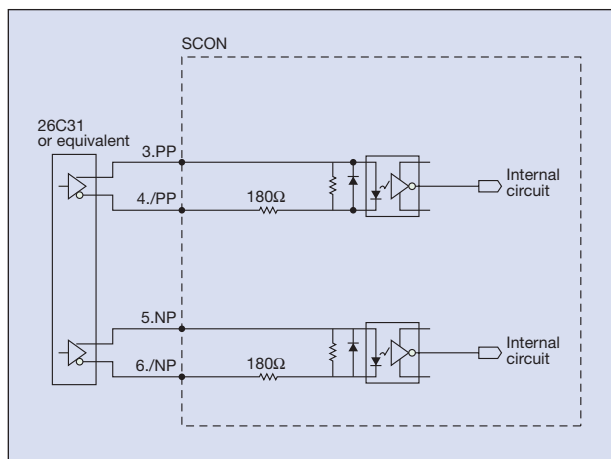

■ Connection Diagram for Pulse-Train Control Mode (Differential Output)

Input/Output Specifications of Pulse-Train Control Type (Differential Line Driver Specifications)

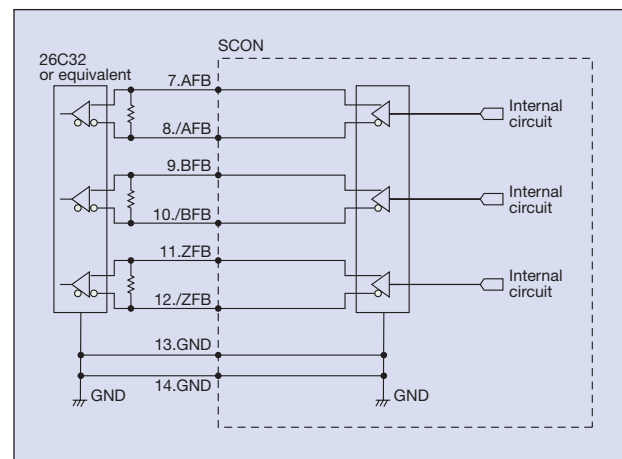

■ Input Part

Maximum input pulses: Line driver interface 500kpps
Open collector interface 200kpps (AK-04 is needed)
Insulation method: Photocoupler insulation

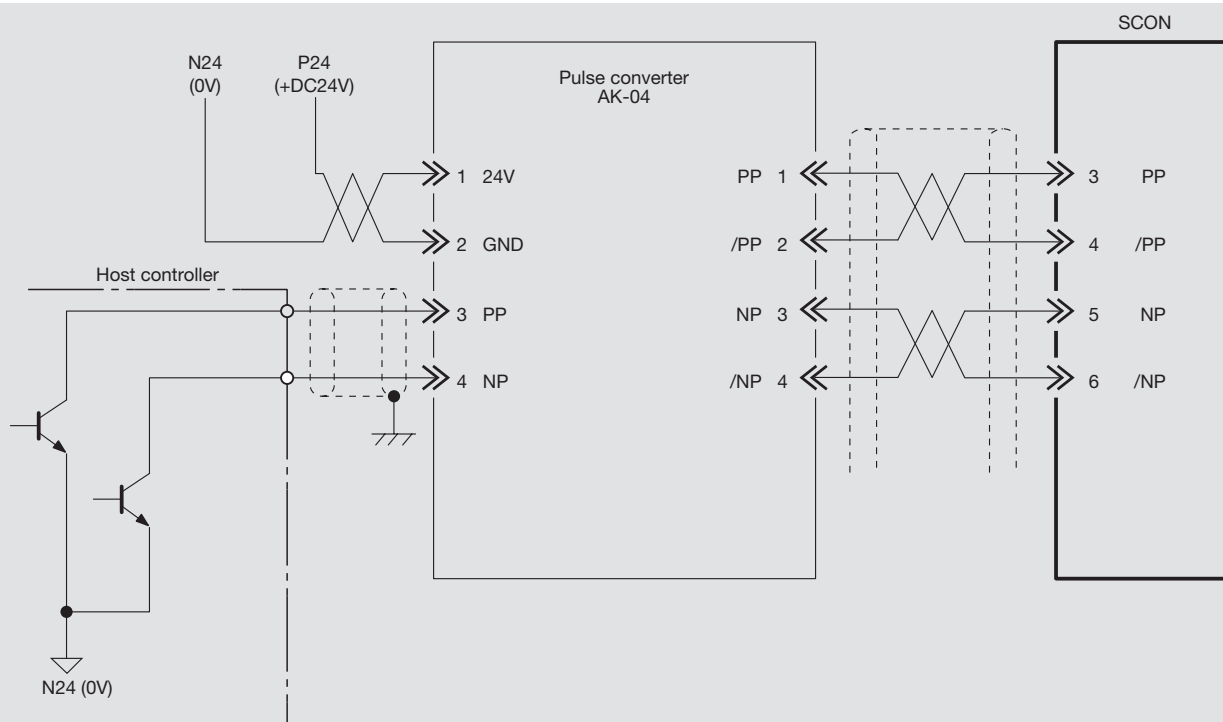

■ Output Part

Output method: Line driver output
Insulated/not insulated: Not insulated

Input/Output Specifications of Pulse-Train Control Type (Open Collector Specifications)

* Use the PIO interface power supply as the 24-VDC power supply to be connected to the AK-04.

* Minimize the cable length between the pulse output unit (PLC) and AK-04. Also keep the cable length between the AK-04 and PULSE connector to 2 m or less.

Specification Table

Item	Specification	
Motor capacity	Less than 400W	400W or more
Connectable actuators	RCS2 series actuator / Single-axis robot / Linear servo actuator	
Number of controlled axes	1 axis	
Operation method	Positioner type / Pulse-train control type	
Number of positioning points	512 points	
Backup memory	EEPROM	
I/O connector	40-pin connector	
Number of I/O points	16 input points / 16 output points	
I/O power supply	Externally supplied 24VDC \pm 10%	
Serial communication	RS485 1ch	
Peripheral communication cable	CB-PAC-PIO □□□	
Command pulse-train input method	Differential line driver method / Open collector method (Conversion of open collector pulses to differential pulses using a pulse converter (Note 1))	
Maximum input pulse frequency	Differential line driver method: 500kpps max. / Open collector method (with a pulse converter): 200kpps max.	
Position detection method	Incremental encoder / Absolute encoder	
Emergency stop function	Available (built-in relay)	
Forced release of electromagnetic brake	Brake release switch ON/OFF	
Motor cable	CB-RCC-MA □□□ (20m max.)	
Encoder cable	CB-RCS2-PA □□□ (20m max.)	
Input power supply	Single-phase 100~115VAC \pm 10% Single-phase 200~230VAC \pm 10%	Single-phase 200~230VAC \pm 10%
Power-supply capacity	20W / 74VA 60W / 186VA 150W / 376VA 30W / 94VA 100W / 282VA 200W / 469VA	400W / 844VA 600W / 1212VA 750W / 1569VA
Dielectric strength voltage	DC500V 100M Ω or more	
Vibration resistance	XYZ directions	10~57Hz One-side amplitude 0.035mm (continuous), 0.075mm (intermittent) 58~150Hz 4.9m/s ² (continuous), 9.8m/s ² (intermittent)
Ambient operating temperature	0~40°C	
Ambient operating humidity	10~95% (non-condensing)	
Operating ambience	Free from corrosive gases	
Protection class	IP20	
Weight	Approx. 800g (+25g for absolute specification)	Approx. 1.1kg
External dimensions	58mm(W) \times 194mm(H) \times 121mm(D)	72mm(W) \times 194mm(H) \times 121mm(D)

(Note 1) For the command-pulse input method, use the differential line driver method offering higher noise resistance. If the open collector method must be used, use an optional pulse converter (AK-04) to convert open collector pulses to differential pulses.

External Dimensions

Name of Each Part

1 LED indicators

These LED indicate the condition of the controller.

Name	Color	Description
PWR		This LED comes on when the system becomes ready (= the CPU is functioning properly after the power has been turned on).
SV		This LED comes on when the servo turns on.
ALM		This LED remains lit while an alarm is present.
EMG		This LED remains lit while an emergency stop is actuated.

2 Rotary switch

This switch sets an address to identify each controller when multiple controllers are linked.

3 Piano switches

Controller system switches.

Name	Description
1	Operation mode selector switch OFF: Positioner mode, ON: Pulse-train control mode * The setting will become effective after the power is reconnected.
2	Remote update switch (normally set to OFF) OFF: Normal operation mode, ON: Update mode * The setting will become effective after the power is reconnected or following a software reset.

4 System I/O connector

A connector for the emergency stop switch, etc.

5 Regenerative unit connector

A connector for the resistor unit that absorbs regenerative current produced when the actuator decelerates to a stop.

6 Motor connector

(compatible with XSEL, ECON and RCS)

A connector for the actuator's motor cable.

7 Power-supply connector

An AC power-supply connector. Divided into the control power input and motor power input.

8 Grounding screw

A screw for protective grounding. Always connect this screw to ground.

9 Dedicated pulse-train control connector

A connector used to operate the controller in the pulse-train control mode. It remains unconnected if the controller is operated in the positioner mode.

10 PIO connector

A connector for a cable used to perform parallel communication with a PLC and other peripherals.

11 Running mode selector switch

Name	Description
MANU	Do not accept PI commands.
AUTO	Accept PI commands.

* The emergency stop switch on the teaching pendant becomes effective when the line is connected, regardless of whether this switch is set to AUTO or MANU. Take note that an emergency stop will be actuated momentarily when the teaching-pendant or SIO communication cable is disconnected. This is a normal phenomenon and does not indicate an error.

12 SIO connector

A connector for a teaching-pendant or PC communication cable.

13 Brake release switch

A switch to forcibly release the electromagnetic brake equipped on the actuator.

* A 24-VDC power supply for driving the brake must be connected.

14 Brake power-supply connector

A connector for supplying 24-VDC brake power. (Required only when an actuator with brake is connected.)

15 Encoder/sensor connector (compatible with XSEL-P/Q)

A connector for the encoder/sensor cables.

16 Absolute-data backup battery connector

A connector for the absolute-data backup battery. (Required only when an absolute-encoder actuator is used.)

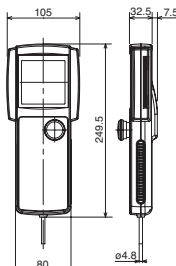

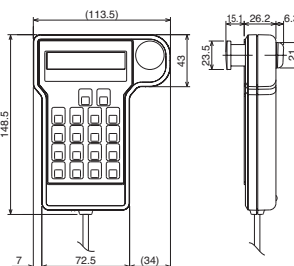

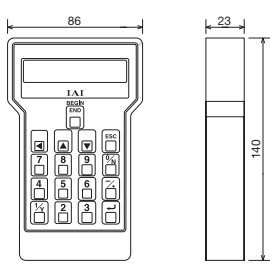

17 Absolute-data backup battery holder

A battery holder into which the absolute-data backup battery is set.

Options

Teaching Pendant

An input device that provides all functions you need for trial operation and adjustment, such as position data input, test operation, as well as monitoring of current axis positions and input/output signals.

Name	Teaching Pendant	Simple teaching pendant	Data setting unit
Model	RCM-T (standard specification) RCM-TD (with deadman switch *1)	RCM-E	RCM-P
Standard price	—	—	—
External view			
Features	A standard, user-friendly teaching pendant equipped with a large LCD screen. A deadman switch type ensuring added safety is also available.	An economical type offering the same functions as the RCA-T at a substantially lower price.	An affordable data setting unit that provides all editing functions other than those relating to axis operation. * This unit does not support operations relating to axis movement.
Display	21 characters x 16 lines on LCD	16 characters x 2 lines on LCD	16 characters x 2 lines on LCD
Weight	Approx. 550g	Approx. 400g	Approx. 360g
Cable length	5m	5m	5m
Ambient operating temperature, humidity	Temperature: 0~40°C, Humidity: 85% RH or below		
External dimensions			

*1 The deadman switch is a safety switch that cuts off the drive source when released to disable operation.

PC Software

A software program that helps input position data and perform test operation. It significantly facilitates debugging operation by offering wide-ranging functions including jogging, inching, step operation and continuous operation.

RS232 Communication Type

Model RCM-101-MW

<Content>PC software (CD-ROM),
PC cable
(communication cable +
RS232 conversion unit)

USB Communication Type

Model RCM-101-USB

<Content>PC software (CD-ROM),
PC cable
(communication cable + USB
conversion unit + USB cable)

Regenerative Resistance Unit

Features This unit returns regenerative electric current when the motor builds heat as it decelerates. Please verify the total W of the actuator from the chart at the right, as it is necessary to make preparations to the regenerative resistance.

Model REU-2 (SCON/SSEL)

Specifications

Weight	0.9kg
Built-in regenerative resistor	220Ω 80W
Unit-controller connection cable (supplied)	CB-SC-REU010 (SSEL)

* Please arrange one each of REU-2 and REU-1 (page 372), when two regenerative units are necessary.

Guide for Determining Necessary Number of Units

	Horizontal	Vertical
0 unit	~200W	~100W
1 unit	~750W	~400W
2 units		~750W

* There may be times when more regenerative resistance is needed than listed above depending on operating conditions.

External Dimensions

Battery for Absolute Data Storage

Features This battery is for storing absolute data for the operating actuator.

Model AB-5

SCON 334

PSEL

Program controller
for RCP2 series

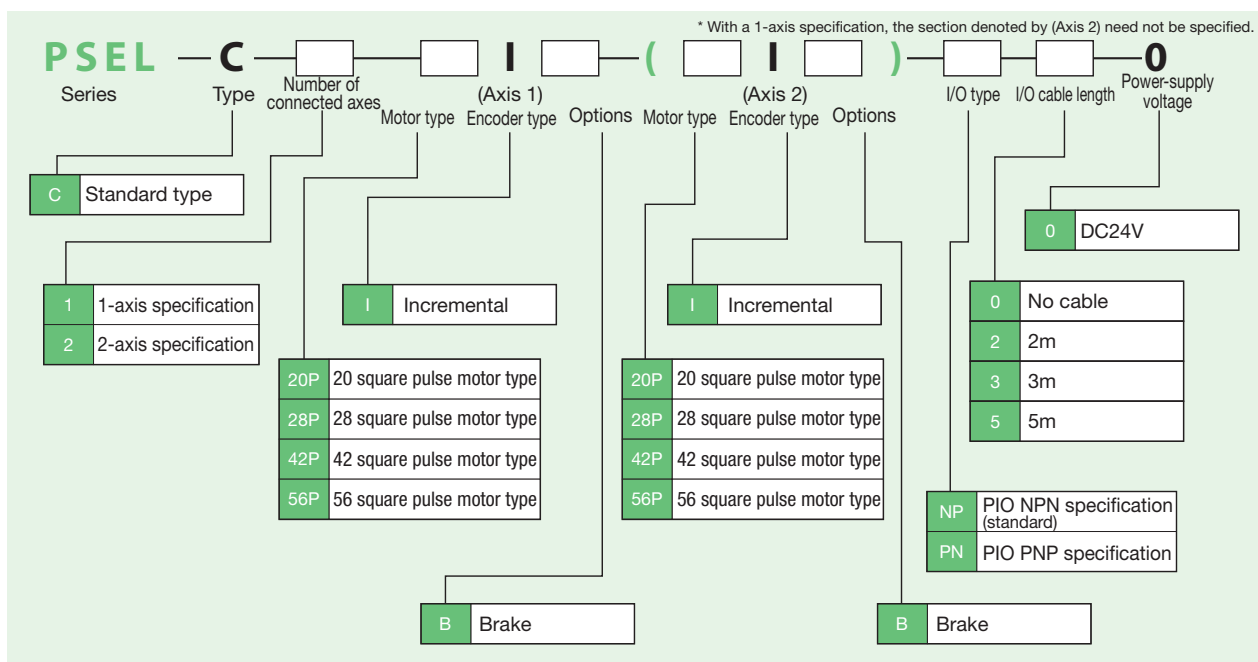

Type List

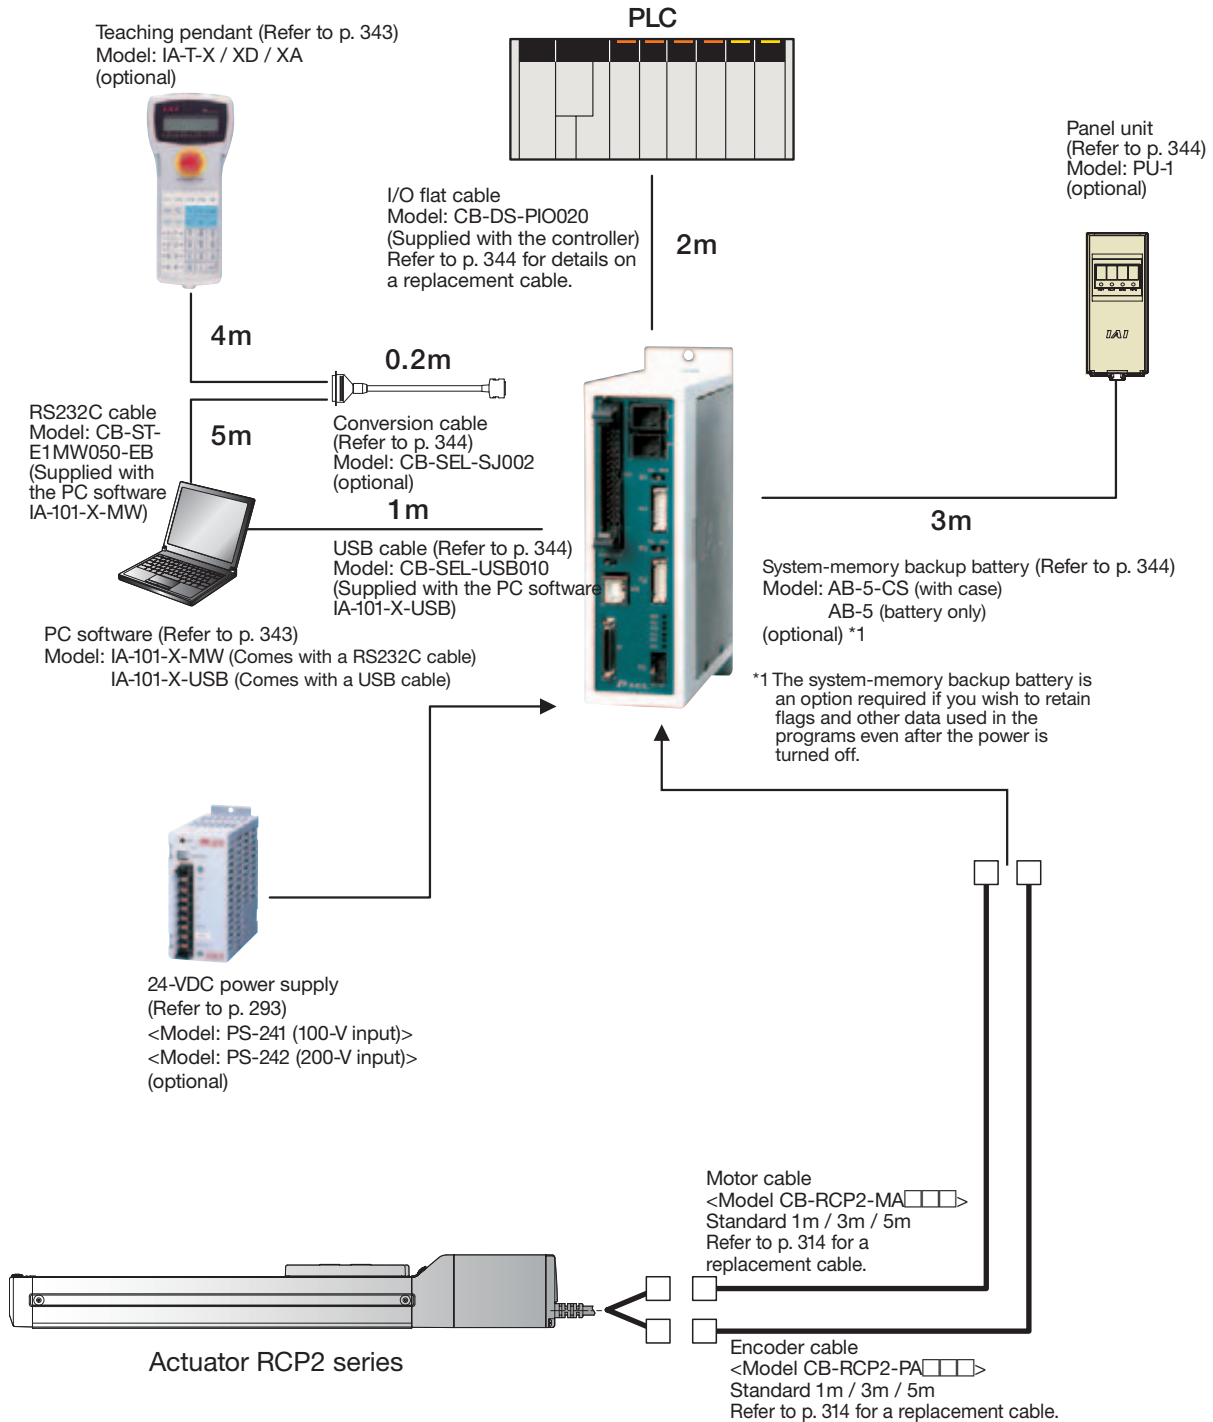

Program controller capable of operating RCP2 series actuator. Various control functions are combined into a single unit.

Type	C	
Name	Program mode	Positioner mode
External view		
Description	Both actuator operation and communication with external equipment can be handled by a single controller. When two axes are connected, arc interpolation and path operation can be performed.	Up to 1,500 positioning points are supported. Push-motion operation and teaching operation are also possible.
Number of position points	1500 points	

Model

System Configuration

I/O Specifications

Input Part External input specifications

Item	Specification
Input voltage	24VDC \pm 10%
Input current	7mA/circuit
ON/OFF voltage	ON voltage (Min) NPN : DC16V / PNP : DC8V OFF voltage (Max) NPN : DC5V / PNP : DC19V
Insulation method	Photocoupler

NPN specification

Output Part External output specifications

Item	Specification
Load voltage	DC24V
Maximum load current	100mA/point 400mA/8 points
Residual voltage	Max 0.1mA/point

Explanation of I/O Functions

The PSEL controller lets you select either the “program mode” in which the actuator is operated by programs input to the controller, or the “positioner mode” in which the actuator moves to the positions specified by PLC signals received from the host.

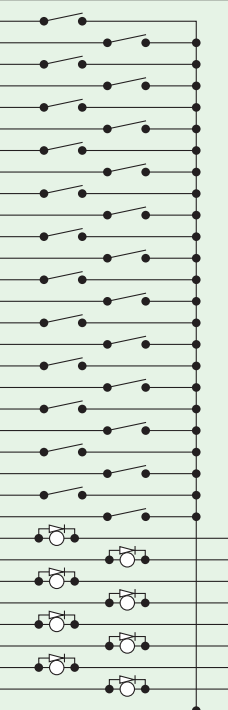

The positioner mode provides the following five input patterns each supporting different applications.

Controller Functions by Type

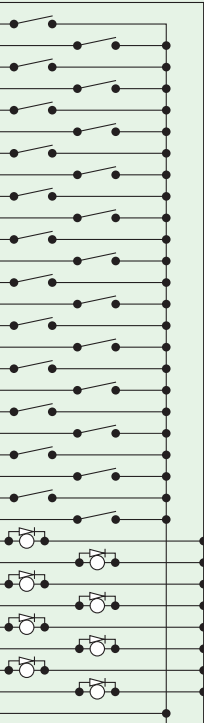

Operation mode	Features
Program mode	Various operations including linear/arc interpolation operation, path operation ideal for coating processes, etc., arch-motion operation and palletizing operation can be performed using the Super SEL language that lets you program complex control actions using simple commands.
Positioner mode	Standard mode
	Product-type switchover mode
	2-axis independent mode
	Teaching mode
	DS-S-C1 compatible mode

Explanation of I/O Functions

Program Mode

Pin number	Category	Port number	Program Mode	Function	Wiring diagram	
1A	P24		24-V input	Connect 24V.		
1B		016	Program No. 1 selection	These signals are used to select the program to be started. (BCD input using ports 016 to 022)		
2A		017	Program No. 2 selection			
2B		018	Program No. 4 selection			
3A		019	Program No. 8 selection			
3B		020	Program No. 10 selection			
4A		021	Program No. 20 selection			
4B		022	Program No. 40 selection			
5A		023	CPU reset	This signal is used to reset the system to create the same condition after power reconnection.		
5B		000	Start	This signal is used to start the program selected by port Nos. 016 to 022.		
6A		Input	001	General-purpose input		These signals are used with a program command to wait for external input.
6B			002	General-purpose input		
7A			003	General-purpose input		
7B			004	General-purpose input		
8A			005	General-purpose input		
8B			006	General-purpose input

11B			012	General-purpose input		
12A			013	General-purpose input		
12B			014	General-purpose input		
13A			015	General-purpose input		
13B	Output	300	Alarm	This signal is output upon an alarm. (Contact B)		
14A		301	Ready	This signal is output once the controller has started properly and entered a ready state.		
14B		302	General-purpose output	These signals can be turned ON/OFF freely using program commands.		
15A		303	General-purpose output			
15B		304	General-purpose output			
16A		305	General-purpose output			
16B		306	General-purpose output			
17A		307	General-purpose output			
17B	N		0-V input	Connect 0V.		

Positioner, Standard Mode

Pin number	Category	Port number	Positioner, Standard Mode	Function	Wiring diagram	
1A	P24		24-V input	Connect 24V.		
1B			Position input 10	Port Nos. 007 to 019 are used to specify a target position number. Numbers can be specified either as BCD or binary codes.		
2A		016	Position input 11			
2B		017	Position input 12			
3A		018	Position input 13			
3B		019				
4A		020	—	—		
4B		021	—	—		
5A		022	—	—		
5B		023	Error reset	This signal is used to reset minor errors. (The power must be reconnected to reset serious errors.)		
6A		000	Start	This signal is used to cause the actuator to start moving to the selected position.		
6B		001	Home return	This signal is used to perform home return.		
7A		002	Servo ON	This signal is used to switch the servo on/off.		
7B		003	Push	This signal is used to perform push-motion operation.		
8A		004	Pause	When this signal is turned OFF while the actuator is moving, the actuator will pause. When the signal is turned ON, the actuator will resume and complete the remaining operation.		
8B		005	Cancellation	When this signal is turned OFF while the actuator is moving, the actuator will stop and the remaining operation will be cancelled.		
9A		006	Interpolation setting	With a 2-axis specification, turning ON this signal causes the actuator to move via linear interpolation.		
9B		007	Position input 1	Port Nos. 007 to 019 are used to specify a target position number. Numbers can be specified either as BCD or binary codes.		
10A		008	Position input 2			
10B		009	Position input 3			
11A		010	Position input 4			
11B		011	Position input 5			
12A		012	Position input 6			
12B		013	Position input 7			
13A		014	Position input 8			
13B	015	Position input 9				
14A	Output	300	Alarm	This signal is output upon an alarm. (Contact B)		
14B		301	Ready	This signal is output once the controller has started properly and entered a ready state.		
15A		302	Position complete	This signal is output upon completion of movement to the specified position.		
15B		303	Home return complete	This signal is output upon completion of home return.		
16A		304	Servo ON output	This signal is output while the servo is on.		
16B		305	Push motion complete	This signal is output upon completion of push-motion operation.		
17A		306	System-memory backup battery error	This signal is output when the system-memory backup battery voltage has dropped (to the warning level).		
17B		307	Absolute-data backup battery error	This signal is output when the absolute-data backup battery voltage has dropped (to the warning level).		
	N		0-V input	Connect 0V.		

Explanation of I/O Functions

Positioner, Product-Type Switchover Mode

Pin number	Category	Port number	Positioner, Product-Type Switchover Mode	Function
1A	P24		24-V input	Connect 24V.
1B		016	Position/product type input 10	Port Nos. 007 to 022 are used to specify a target position number and a product type number. Position numbers and product type numbers are assigned by parameter settings. Numbers can be specified either as BCD or binary codes.
2A		017	Position/product type input 12	
2B		018	Position/product type input 12	
3A		019	Position/product type input 13	
3B		020	Position/product type input 14	
4A		021	Position/product type input 15	
4B		022	Position/product type input 16	
5A		023	Error reset	This signal is used to reset minor errors. (The power must be reconnected to reset serious errors.)
5B		000	Start	This signal is used to cause the actuator to start moving to the selected position.
6A		001	Home return	This signal is used to perform home return.
6B		002	Servo ON	This signal is used to switch the servo on/off.
7A	Input	003	Push	This signal is used to perform push-motion operation.
7B		004	Pause	When this signal is turned OFF while the actuator is moving, the actuator will pause. When the signal is turned ON, the actuator will resume and complete the remaining operation.
8A		005	Cancellation	When this signal is turned OFF while the actuator is moving, the actuator will stop and the remaining operation will be cancelled.
8B		006	Interpolation setting	With a 2-axis specification, turning ON this signal causes the actuator to move via linear interpolation.
9A		007	Position/product type input 1	Port Nos. 007 to 022 are used to specify a target position number and a product type number. Position numbers and product type numbers are assigned by parameter settings. Numbers can be specified either as BCD or binary codes.
9B		008	Position/product type input 2	
10A		009	Position/product type input 3	
10B		010	Position/product type input 4	
11A		011	Position/product type input 5	
11B		012	Position/product type input 6	
12A		013	Position/product type input 7	
12B		014	Position/product type input 8	
13A		015	Position/product type input 9	
13B	Output	300	Alarm	This signal is output upon an alarm. (Contact B)
14A		301	Ready	This signal is output once the controller has started properly and entered a ready state.
14B		302	Position complete	This signal is output upon completion of movement to the specified position.
15A		303	Home return complete	This signal is output upon completion of home return.
15B		304	Servo ON output	This signal is output while the servo is on.
16A		305	Push motion complete	This signal is output upon completion of push-motion operation.
16B		306	System-memory backup battery error	This signal is output when the system-memory backup battery voltage has dropped (to the warning level).
17A		307	Absolute-data backup battery error	This signal is output when the absolute-data backup battery voltage has dropped (to the warning level).
17B	N		0-V input	Connect 0V.

Wiring diagram

Positioner, 2-axis Independent Mode

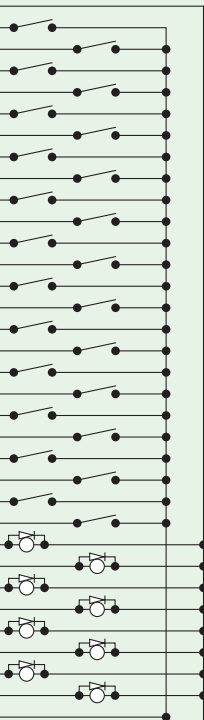

Pin number	Category	Port number	Positioner, Product-Type Switchover Mode	Function
1A	P24		24-V input	Connect 24V.
1B		016	Position input 7	Port Nos. 010 to 022 are used to specify a target position number. Position numbers for axis 1 and those for axis 2 are assigned by parameter settings.
2A		017	Position input 8	
2B		018	Position input 9	
3A		019	Position input 10	
3B		020	Position input 11	
4A		021	Position input 12	
4B		022	Position input 13	
5A		023	Error reset	This signal is used to reset minor errors. (The power must be reconnected to reset serious errors.)
5B		000	Start 1	This signal is used to cause axis 1 to start moving to the selected position.
6A		001	Home return 1	This signal is used to move axis 1 to the home.
6B		002	Servo ON 1	This signal is used to switch on/off the servo for axis 1.
7A	Input	003	Pause 1	When this signal is turned OFF while axis 1 is moving, the actuator will pause. When the signal is turned ON, the actuator will resume and complete the remaining operation.
7B		004	Cancellation 1	This signal is used to cancel the movement of axis 1.
8A		005	Start 2	This signal is used to cause axis 2 to start moving to the selected position.
8B		006	Home return 2	This signal is used to move axis 2 to the home.
9A		007	Servo ON 2	This signal is used to switch on/off the servo for axis 2.
9B		008	Pause 2	When this signal is turned OFF while axis 2 is moving, the actuator will pause. When the signal is turned ON, the actuator will resume and complete the remaining operation.
10A		009	Cancellation 2	This signal is used to cancel the movement of axis 2.
10B		010	Position input 1	Port Nos. 010 to 022 are used to specify a target position number. Position numbers for axis 1 and those for axis 2 are assigned by parameter settings.
11A		011	Position input 2	
11B		012	Position input 3	
12A		013	Position input 4	
12B		014	Position input 5	
13A		015	Position input 6	
13B	Output	300	Alarm	This signal is output upon an alarm. (Contact B)
14A		301	Ready	This signal is output once the controller has started properly and entered a ready state.
14B		302	Position complete 1	This signal is output upon completion of movement of axis 1 to the specified position.
15A		303	Home return complete 1	This signal is output upon completion of home return of axis 1.
15B		304	Servo ON output 1	This signal is output while the servo for axis 1 is on.
16A		305	Position complete 2	This signal is output upon completion of movement of axis 2 to the specified position.
16B		306	Home return complete 2	This signal is output upon completion of home return of axis 2.
17A		307	Servo ON output 2	This signal is output while the servo for axis 2 is on.
17B	N		0-V input	Connect 0V.

Wiring diagram

Explanation of I/O Functions

Positioner, Teach Mode

Pin number	Category	Port number	Positioner, Product-Type Switchover Mode	Function	Wiring diagram
1A	P24		24-V input	Connect 24V.	
1B		016	Axis 1 JOG-	While this signal is input, axis 1 moves in the negative direction.	
2A		017	Axis 2 JOG+	While this signal is input, axis 2 moves in the positive direction.	
2B		018	Axis 2 JOG-	While this signal is input, axis 2 moves in the negative direction.	
3A		019	Inching specification (0.01mm)	These signals are used to specify an inching travel distance. (The travel distance is the sum of values specified by port Nos. 019 to 022.)	
3B		020	Inching specification (0.1mm)		
4A		021	Inching specification (0.5mm)		
4B		022	Inching specification (1mm)		
5A		023	Error reset	This signal is used to reset minor errors. (The power must be reconnected to reset serious errors.)	
5B		000	Start	This signal is used to cause the actuator to start moving to the selected position.	
6A		001	Servo ON	This signal is used to switch the servo on/off.	
6B		002	Pause	When this signal is turned OFF while the actuator is moving, the actuator will pause. When the signal is turned ON, the actuator will resume and complete the remaining operation.	
7A		003	Position input 1	Port Nos. 003 to 013 are used to specify a target position number and a position number under which to input the current position. When the teaching mode specification signal at port No. 014 is ON, the current value will be written under the specified position number upon turning ON of the start signal at port No. 000.	
7B		004	Position input 2		
8A		005	Position input 3		
8B		006	Position input 4		
9A		007	Position input 5		
9B		008	Position input 6		
10A		009	Position input 7		
10B		010	Position input 8		
11A		011	Position input 9		
11B		012	Position input 10		
12A		013	Position input 11		
12B		014	Teaching mode specification		
13A	Output	015	Axis 1 JOG+	While this signal is input, axis 1 moves in the positive direction.	
13B		300	Alarm	This signal is output upon an alarm. (Contact B)	
14A		301	Ready	This signal is output once the controller has started properly and entered a ready state.	
14B		302	Position complete	This signal is output upon completion of movement to the specified position.	
15A		303	Home return complete	This signal is output upon completion of home return.	
15B		304	Servo ON output	This signal is output while the servo is on.	
16A		305	—	—	
16B		306	System-memory backup battery error	This signal is output when the system-memory backup battery voltage has dropped (to the warning level).	
17A		307	Absolute-data backup battery error	This signal is output when the absolute-data backup battery voltage has dropped (to the warning level).	
17B		N	0-V input	Connect 0V.	

Positioner, DS-S-C1 Interchangeable Mode

Pin number	Category	Port number	Positioner, Standard Mode	Function	Wiring diagram
1A	P24		24-V input	Connect 24V.	
1B		016	Position No. 1000	(Same as port Nos. 004 to 015)	
2A		017	—	—	
2B		018	—	—	
3A		019	—	—	
3B		020	—	—	
4A		021	—	—	
4B		022	—	—	
5A		023	CPU reset	This signal is used to reset the system to create the same condition after power reconnection.	
5B		000	Start	This signal is used to cause the actuator to start moving to the selected position.	
6A		001	Hold (pause)	When this signal is turned OFF while the actuator is moving, the actuator will pause. When the signal is turned ON, the actuator will resume the remaining operation.	
6B		002	Cancellation	When this signal is turned OFF while the actuator is moving, the actuator will stop and the remaining operation will be cancelled.	
7A		003	Interpolation setting	With a 2-axis specification, turning ON this signal causes the actuator to move via linear interpolation.	
7B		004	Position No. 1	Port Nos. 004 to 016 are used to specify a target position number. Numbers can be specified as BCD.	
8A		005	Position No. 2		
8B		006	Position No. 4		
9A		007	Position No. 8		
9B		008	Position No. 10		
10A		009	Position No. 20		
10B		010	Position No. 40		
11A		011	Position No. 80		
11B		012	Position No. 100		
12A		013	Position No. 200		
12B		014	Position No. 400		
13A	015	Position No. 800			
13B	Output	300	Alarm	This signal is output upon an alarm. (Contact A)	
14A		301	Ready	This signal is output once the controller has started properly and entered a ready state.	
14B		302	Position complete	This signal is output upon completion of movement to the specified position.	
15A		303	—	—	
15B		304	—	—	
16A		305	—	—	
16B		306	System-memory backup battery error	This signal is output when the system-memory backup battery voltage has dropped (to the warning level).	
17A	307	Absolute-data backup battery error	This signal is output when the absolute-data backup battery voltage has dropped (to the warning level).		
17B	N		0-V input	Connect 0V.	

Specification Table

	Item	Specification
Basic specifications	Connectable actuators	RCP2 series actuator (Note 1)
	Input power supply	DC24V $\pm 10\%$
	Power-supply capacity	5.5A max. 5.5A
	Dielectric strength voltage	500VDC, 10M Ω or above
	Breakdown resistance	500VAC, 1 minute
	Rush current	30A max.
Control specifications	Vibration resistance	XYZ directions 10~57Hz One-side amplitude 0.035mm (continuous), 0.075mm (intermittent) 58~150Hz 4.9m/s ² (continuous), 9.8m/s ² (intermittent)
	Number of controlled axes	1 axis/2 axes
	Maximum total output of connected axes	—
	Position detection method	Incremental encoder
	Speed setting	From 1mm/s. The maximum limit varies depending on the actuator.
	Acceleration setting	From 0.01G. The maximum limit varies depending on the actuator.
Program	Operation method	Program operation / Positioner operation (switchable)
	Programming language	Super SEL language
	Number of programs	64 programs
	Number of program steps	2,000 steps
	Number of multi-tasking programs	8 programs
	Number of positioning points	1,500 points
Communication	Data storage device	Flash ROM (A system-memory backup battery can be added as an option)
	Data input method	Teaching pendant or PC software
	Number of I/O points	24 input points / 8 output points (NPN or PNP selectable)
	I/O power supply	Externally supplied 24VDC $\pm 10\%$
	PIO cable	CB-DS-PIO (supplied with the controller)
	Serial communication function	RS232C (D-sub, half-pitch connector) / USB connector
General specifications	Field network	(To be supported in the future)
	Motor cable	CB-RCP2-MA (20m max.)
	Encoder cable	MoCB-RCP2-PA (20m max.)
	Protective functions	Motor overcurrent, motor driver temperature check, overload check, encoder open-circuit check, soft limit over, system error, battery error, etc.
	Ambient operating temperature, humidity	0~40°C, 10~95% (non-condensing)
	Operating ambience	Free from corrosive gases. In particular, there shall be no significant powder dust.
General specifications	Protection class	IP20
	Weight	Approx. 450g
	External dimensions	43mm W \times 159mm H \times 110mm D

(Note 1) The high-thrust type (RA10C), high-speed type (HS8C/HS8R) and waterproof type (RCP2W-SA16) cannot be operated.

External Dimensions

Name of Each Part

1 Motor connector for axis 1

Connect the motor cable of the axis 1 actuator.

2 Motor connector for axis 2

Connect the motor cable of the axis 2 actuator.

3 Brake switch for axis 1

This switch is used to release the axis brake. Setting it to the left position (RLS side) forcibly releases the brake, while setting it to the right position (NOM side) causes the controller to automatically control the brake.

4 Encoder connector for axis 1

Connect the encoder cable of the axis 1 actuator.

5 Brake switch for axis 2

This switch is used to release the axis brake. Setting it to the left position (RLS side) forcibly releases the brake, while setting it to the right position (NOM side) causes the controller to automatically control the brake.

6 Encoder connector for axis 2

Connect the encoder cable of the axis 2 actuator.

7 Status indicator LEDs

These LEDs are used to indicate the operating condition of the controller.

Indication details are as follows:

PWR: This LED indicates that the controller is receiving power.

RDY: This LED indicates that the controller is ready to perform program operation.

ALM: This LED indicates that the controller is abnormal.

EMG: This LED indicates that an emergency stop is actuated and the drive source is cut off.

SV1: This LED indicates that the axis 1 actuator servo is on.

SV2: This LED indicates that the axis 2 actuator servo is on.

8 Panel unit connector

A connector for the panel unit (optional) that displays the controller status and error numbers.

9 I/O connector

A connector for interface I/Os.

A 34-pin flat connector is used for the DIO (24 IN/8 OUT) interface.

The I/O power is also supplied to the controller through this connector (pins 1 and 34).

10 Mode switch

This switch is used to specify the running mode of the controller.

The left position indicates the MANU (manual operation) mode, while the right position indicates the AUTO (automatic operation) mode. Teaching can only be performed as manual operation, and automatic operation using external I/Os is not possible in the MANU mode.

11 USB connector

A connector for PC connection via USB. If the USB connector is connected, the TP connector is disabled and all communication inputs to the TP connector are cut off.

12 Teaching pendant (TP) connector

A half-pitch I/O 26-pin connector that connects a teaching pendant when the running mode is MANU. A special conversion cable is needed to connect a conventional D-sub, 25-pin connector.

13 System-memory backup battery connector

If you wish to retain the various data recorded in the SRAM of the controller even after the power is cut off, connect the necessary battery to this connector. This battery is installed externally to the unit. The controller does not come standard with the battery (it must be specified as an option).

14 Motor power input connector

This connector is used to input the motor power. It consists of a 2-pin, 2-piece connector by Phoenix Contact.

15 Control power/system input connector

This connector is used to connect the control power input, emergency stop switch, and enable switch. It consists of a 6-pin, 2-piece connector by Phoenix Contact.

Options

Teaching pendant

- Features** A teaching device providing program/position input function, test operation function, monitoring function, and more.

Model

Model	Description	
IA-T-X-J	Standard type with connector conversion cable	—
IA-T-X	Standard type	—
IA-T-XD-J	Deadman switch type with connector conversion cable	—
IA-T-XD	Deadman switch type	—
IA-T-XA-J	ANSI type with connector conversion cable	—
IA-T-XA	ANSI type	—

Configuration

IA-T-X/XD

IA-T-XA

Specifications

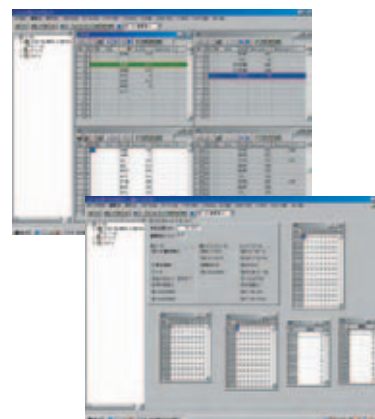

Item	IA-T-X/XD	IA-T-XA
Ambient operating temperature, humidity	Temperature 0~40°C, Humidity 85% RH or below	
Operating ambience	Free from corrosive gases. In particular, there shall be no significant powder dust.	Protective structure conforming to IP54
Weight	Approx. 650g	Approx. 600g (excluding cable)
Cable length	4m	5m
Display	LCD with 20 characters x 4 lines	LCD with 32 characters x 8 lines

PC Software (Windows Only)

- Features** A startup support software program offering program/position input function, test operation function, monitoring function, and more. The functions needed for debugging have been enhanced to help reduce the startup time.

- Model** **IA-101-X-MW-J**
(with RS232C Cable + Connector Conversion Cable)

Configuration

Note
The PSEL controller is supported by version 7.0.0.0 or later.

- Model** **IA-101-X-USB** (with USB Cable)

Configuration

Options

Panel Unit

Features A display for checking controller error codes and active program numbers.

Model PU-1 (Cable Length 3m)

USB Cable

Features Use this cable to connect your controller with USB port to a PC. If your controller has no USB port (XSEL), connect a RS232C cable to a USB cable via a USB conversion adapter and connect the USB cable to the USB port on the PC.
(Refer to the PC software IA-101-X-USBMW.)

Model CB-SEL-USB010 (Cable Length 1m)

System-Memory Backup Battery

Features If your programs use global flags, etc., you need this battery to retain data even after the power is turned off.

Model AB-5-CS (with Case)
AB-5 (Battery Only)

Dummy plug

Features When connecting your PSEL controller to a PC using a USB cable, install this plug on the teaching port to cut off the enable circuit. (This plug comes with the PC software IA-101-X-USB.)

Model DP-3

Connector Conversion Cable

Features This conversion cable is used to connect a D-sub, 25-pin connector for teaching pendant or PC software to the teaching connector (half-pitch) on the PSEL controller.

Model CB-SEL-SJ002 (Cable Length 0.2m)

Spare Parts

Should you require spare parts after the purchase of your product for replacing the original cables, etc., refer to the model names specified below.

Motor Cable

Model CB-RCP2-MA

* The standard motor cable is a robot cable.

* indicates the cable length (L). Lengths up to 20 m can be specified. Example) 080 = 8 m

Encoder Cable / Encoder Robot Cable

Model CB-RCP2-PA / **CB-RCP2-PA** -**RB**

* The standard encoder cable is a normal cable. A robot cable can be specified as an option.

* indicates the cable length (L). Lengths up to 20 m can be specified. Example) 080 = 8 m

I/O Flat Cable

Model CB-DS-PIO

* indicates the cable length (L). Lengths up to 10 m can be specified. Example) 080 = 8 m

ASEL

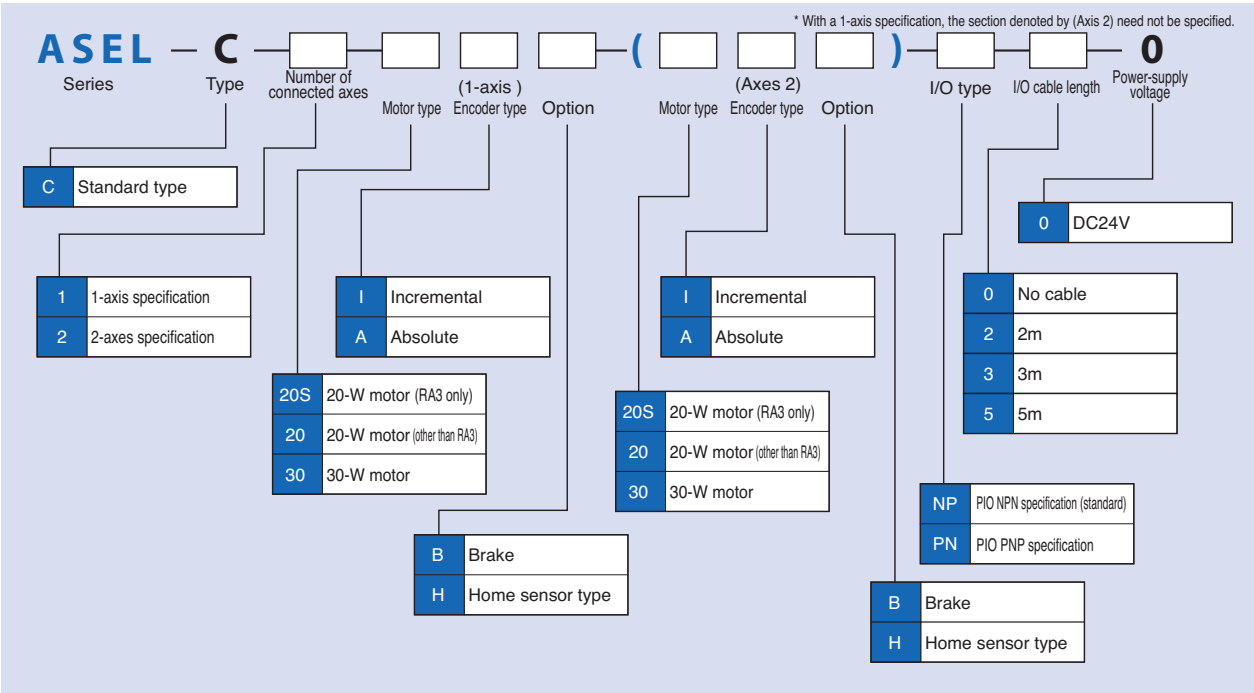

Position controller for RCA series
Program controller

Type List

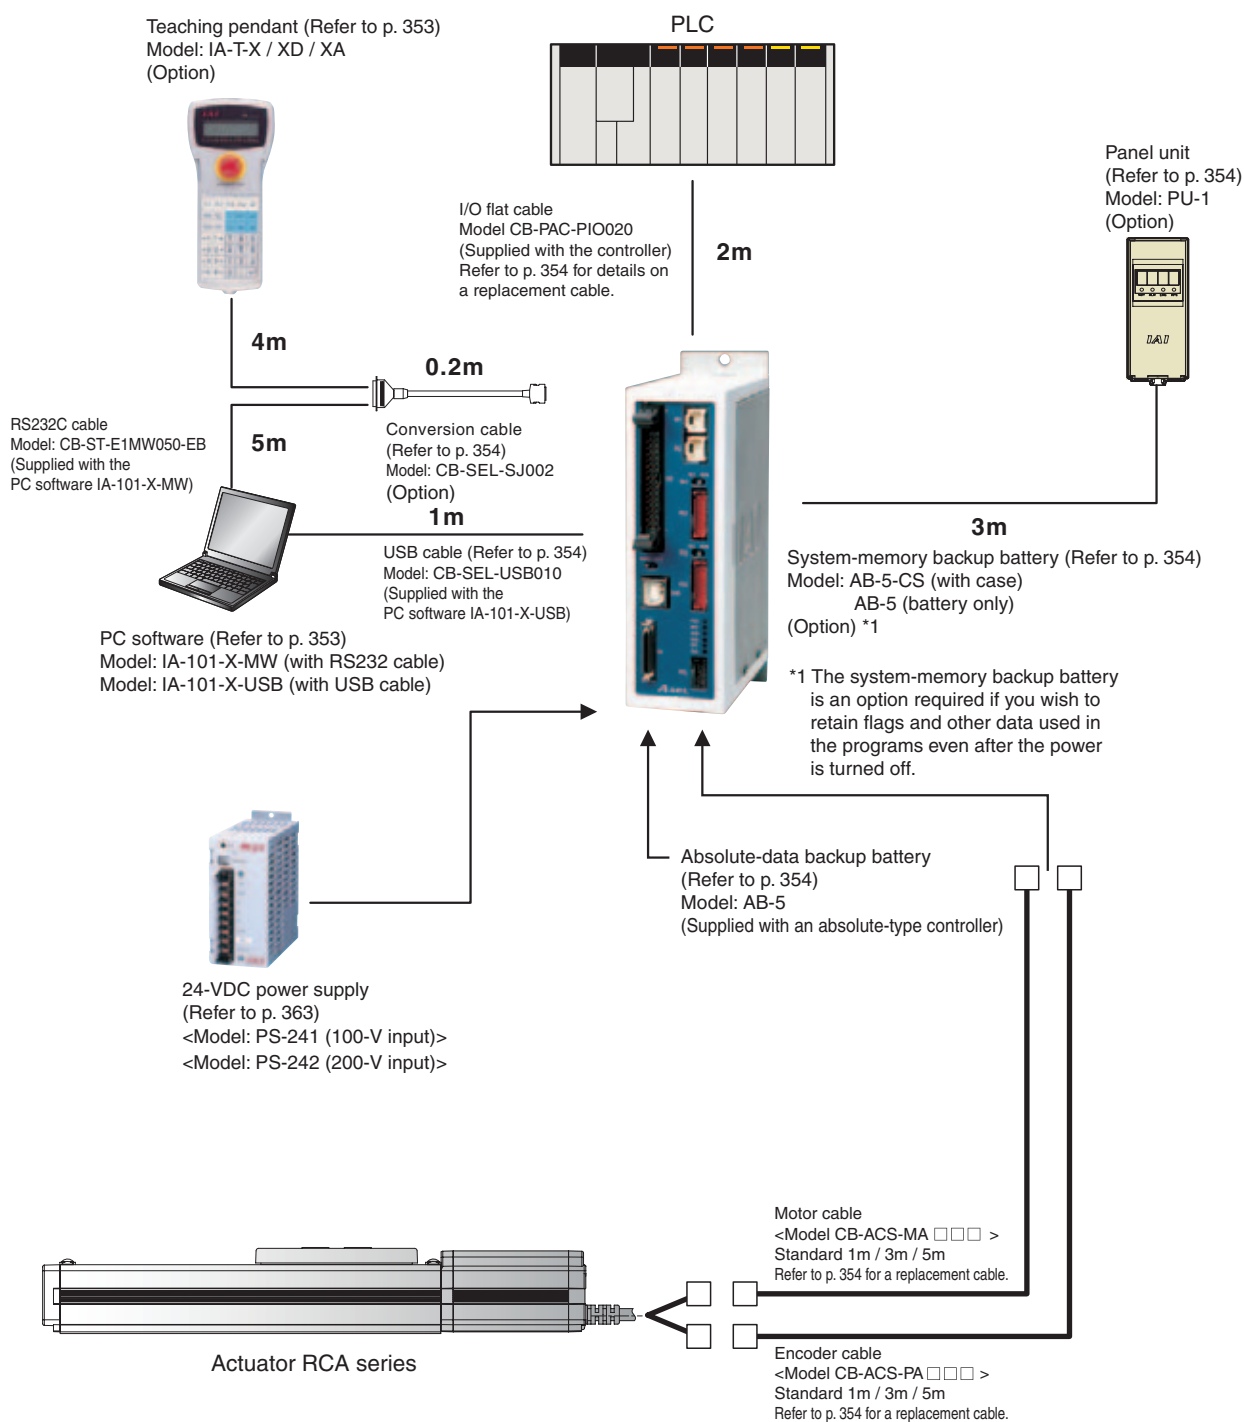

Program controller capable of operating RCA series actuator. Various control functions are combined into a single unit.

Type	C	
Name	Program mode	Positioner mode
External view		
Description	Both actuator operation and communication with external equipment can be handled by a single controller. When two axes are connected, arc interpolation and path operation can be performed.	Up to 1,500 positioning points are supported. Push-motion operation and teaching operation are also possible.
Number of position points	1500	

Model

System Configuration

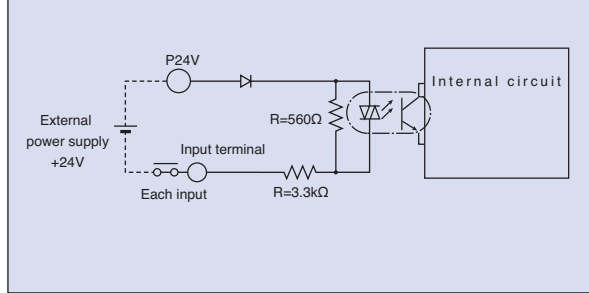

I/O Specifications

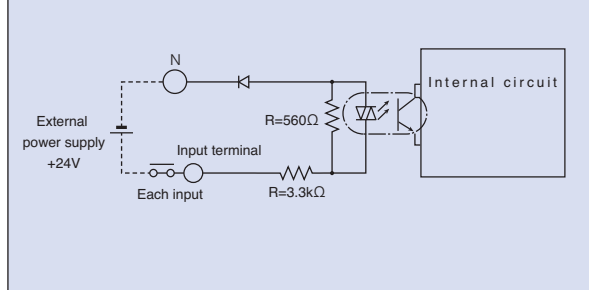

Input Part External input specifications

Item	Specification
Input voltage	DC24V \pm 10%
Input current	7mA/1circuit
ON/OFF voltage	ON voltage (Min.) NPN:DC16V/PNP:DC8V OFF voltage (Max.) NPN:DC5V/PNP:DC19V
Insulation method	Photocoupler

NPN specification

PNP specification

Output Part External output specifications.

Item	Specification
Load voltage	DC24V
Max. load current	1mA/point 400mA/8point total
Leak current	Max. 0.1mA/1point
Insulation method	Photocoupler

NPN specification

PNP specification

Explanation of I/O Functions

The ASEL controller lets you select either the “program mode” in which the actuator is operated by programs input to the controller, or the “positioner mode” in which the actuator moves to the positions specified by PLC signals received from the host. The positioner mode provides the following five input patterns each supporting different applications.

Controller Functions by Type

Operation mode		Features
Program mode		Various operations including linear/arc interpolation operation, path operation ideal for coating processes, etc., arch-motion operation and palletizing operation can be performed using the Super SEL language that lets you program complex control actions using simple commands.
Positioner mode	Standard mode	A basic operation mode in which a position number is specified and then a start signal is input to start operation. Push-motion operation and 2-axis linear interpolation operation are also supported.
	Product-type switchover mode	Multiple works of the same shape with slightly different hole positions can be handled using movement commands to the same position numbers by simply changing the product type number.
	2-axis independent mode	With a 2-axis controller, each axis can be commanded and operated separately.
	Teaching mode	The slider (rod) can be moved via an external signal to store the achieved position as position data.
	DS-S-C1 compatible mode	If you were using a DS-S-C1 controller before, you can replace it with a ASEL controller without having to change the host programs. * This mode does not ensure actuator compatibility.

Explanation of I/O Functions

Program mode

Pin number	Category	Port number	Program mode	Function	Wiring diagram
1A	Input		24-V input	Connect 24V.	
1B		016	Program No. 1 selection	These signals are used to select the program to be started. (BCD input using ports 016 to 022)	
2A		017	Program No. 2 selection		
2B		018	Program No. 4 selection		
3A		019	Program No. 8 selection		
3B		020	Program No. 10 selection		
4A		021	Program No. 20 selection		
4B		022	Program No. 40 selection		
5A		023	CPU reset	This signal is used to reset the system to create the same condition after power reconnection.	
5B		000	Start	This signal is used to start the program selected by port Nos. 016 to 022.	
6A		001	General-purpose input	These signals are used with a program command to wait for external input.	
6B		002	General-purpose input		
7A		003	General-purpose input		
7B		004	General-purpose input		
8A		005	General-purpose input		
8B		006	General-purpose input		
9A		007	General-purpose input		
9B		008	General-purpose input		
10A		009	General-purpose input		
10B		010	General-purpose input		
11A		011	General-purpose input		
11B		012	General-purpose input		
12A		013	General-purpose input		
12B		014	General-purpose input		
13A	015	General-purpose input			
13B	Output	300	Alarm	This signal is output upon an alarm. (Contact B)	
14A		301	Ready	This signal is output once the controller has started properly and entered a ready state.	
14B		302	General-purpose output	These signals can be turned ON/OFF freely using program commands.	
15A		303	General-purpose output		
15B		304	General-purpose output		
16A		305	General-purpose output		
16B		306	General-purpose output		
17A		307	General-purpose output		
17B	N		0-V input	Connect 0V.	

Positioner, Standard Mode

Pin number	Category	Port number	Positioner, standard mode	Function	Wiring diagram
1A	Input		24-V input	Connect 24V.	
1B		016	Position input 10	Port Nos. 007 to 019 are used to specify a target position number. Numbers can be specified either as BCD or binary codes.	
2A		017	Position input 11		
2B		018	Position input 12		
3A		019	Position input 13		
3B		020	-		
4A		021	-		
4B		022	-		
5A		023	Error reset	This signal is used to reset minor errors. (The power must be reconnected to reset serious errors.)	
5B		000	Start	This signal is used to cause the actuator to start moving to the selected position.	
6A		001	Home return	This signal is used to perform home return.	
6B		002	Servo ON	This signal is used to switch the servo on/off.	
7A		003	Push	This signal is used to perform push-motion operation.	
7B		004	Pause	When this signal is turned OFF while the actuator is moving, the actuator will pause. When the signal is turned ON, the actuator will resume and complete the remaining operation.	
8A		005	Cancellation	When this signal is turned OFF while the actuator is moving, the actuator will stop and the remaining operation will be cancelled.	
8B		006	Interpolation setting	With a 2-axis specification, turning ON this signal causes the actuator to move via linear interpolation.	
9A		007	Position input 1	Port Nos. 007 to 019 are used to specify a target position number. Numbers can be specified either as BCD or binary codes.	
9B		008	Position input 2		
10A		009	Position input 3		
10B		010	Position input 4		
11A		011	Position input 5		
11B		012	Position input 6		
12A		013	Position input 7		
12B		014	Position input 8		
13A	015	Position input 9			
13B	Output	300	Alarm	This signal is output upon an alarm. (Contact B)	
14A		301	Ready	This signal is output once the controller has started properly and entered a ready state.	
14B		302	Position complete	This signal is output upon completion of movement to the specified position.	
15A		303	Home return complete	This signal is output upon completion of home return.	
15B		304	Servo ON output	This signal is output while the servo is on.	
16A		305	Push motion complete	This signal is output upon completion of push-motion operation.	
16B		306	System-memory backup battery error	This signal is output when the system-memory backup battery voltage has dropped (to the warning level).	
17A		307	Absolute-data backup battery error	This signal is output when the absolute-data backup battery voltage has dropped (to the warning level).	
17B	N		0-V input	Connect 0V.	

Explanation of I/O Functions

Positioner, Product-Type Switchover Mode

Pin number	Category	Port number	Positioner, product-type switchover mode	Function
1A	P24		24-V input	Connect 24V.
1B		016	Position/product type input 10	Port Nos. 007 to 022 are used to specify a target position number and a product type number. Position numbers and product type numbers are assigned by parameter settings. Numbers can be specified either as BCD or binary codes.
2A		017	Position/product type input 11	
2B		018	Position/product type input 12	
3A		019	Position/product type input 13	
3B		020	Position/product type input 14	
4A		021	Position/product type input 15	
4B		022	Position/product type input 16	
5A		023	Error reset	
5B		000	Start	
6A		001	Home return	
6B		002	Servo ON	
7A	Input	003	Push	This signal is used to reset minor errors. (The power must be reconnected to reset serious errors.) This signal is used to cause the actuator to start moving to the selected position. This signal is used to perform home return. This signal is used to switch the servo on/off. This signal is used to perform push-motion operation. When this signal is turned OFF while the actuator is moving, the actuator will pause. When the signal is turned ON, the actuator will resume and complete the remaining operation. When this signal is turned OFF while the actuator is moving, the actuator will stop and the remaining operation will be cancelled. With a 2-axis specification, turning ON this signal causes the actuator to move via linear interpolation.
7B		004	Pause	
8A		005	Cancellation	
8B		006	Interpolation setting	
9A		007	Position/product type input 1	
9B		008	Position/product type input 2	
10A		009	Position/product type input 3	
10B		010	Position/product type input 4	
11A		011	Position/product type input 5	
11B		012	Position/product type input 6	
12A		013	Position/product type input 7	Port Nos. 007 to 022 are used to specify a target position number and a product type number. Position numbers and product type numbers are assigned by parameter settings. Numbers can be specified either as BCD or binary codes.
12B		014	Position/product type input 8	
13A		015	Position/product type input 9	
13B		300	Alarm

16B		306	System-memory backup battery error	
17A		307	Absolute-data backup battery error	
17B	N		0-V input	Connect 0V.

Wiring diagram

Positioner, 2-axis Independent Mode

Pin number	Category	Port number	Positioner	Function
1A	P24		24-V input	Connect 24V.
1B		016	Position input 10	Port Nos. 010 to 022 are used to specify a target position number. Position numbers for axis 1 and those for axis 2 are assigned by parameter settings. Numbers can be specified either as BCD or binary codes.
2A		017	Position input 11	
2B		018	Position input 12	
3A		019	Position input 13	
3B		020	Position input 14	
4A		021	Position input 15	
4B		022	Position input 16	
5A		023	Error reset	
5B		000	Start 1	
6A		001	Home return 1	
6B		002	Servo ON 1	This signal is used to reset minor errors. (The power must be reconnected to reset serious errors.) This signal is used to cause the actuator to start moving to the selected position. This signal is used to move axis 1 to the home. This signal is used to switch on/off the servo for axis 1. When this signal is turned OFF while axis 1 is moving, the actuator will pause. When the signal is turned ON, the actuator will resume and complete the remaining operation. This signal is used to cancel the movement of axis 1. This signal is used to cause axis 2 to start moving to the selected position. This signal is used to move axis 2 to the home. This signal is used to switch on/off the servo for axis 2. When this signal is turned OFF while axis 2 is moving, the actuator will pause. When the signal is turned ON, the actuator will resume and complete the remaining operation. This signal is used to cancel the movement of axis 2.
7A	Input	003	Pause 1	
7B		004	Cancellation 1	
8A		005	Start 2	
8B		006	Home return 2	
9A		007	Servo ON 2	
9B		008	Pause 2	
10A		009	Cancellation 2	
10B		010	Position input 1	
11A		011	Position input 2	
11B		012	Position input 3	
12A		013	Position input 4	Port Nos. 010 to 022 are used to specify a target position number. Position numbers for axis 1 and those for axis 2 are assigned by parameter settings. Numbers can be specified either as BCD or binary codes.
12B		014	Position input 5	
13A		015	Position input 6	
13B		300	Alarm	
14A		301	Ready	
14B		302	Position complete 1

15B		304	Servo ON output 1	
16A		305	Position complete 2	
16B		306	Home return complete 2	
17A		307	Servo ON output 2	
17B	N		0-V input	Connect 0V.

Wiring diagram

Specification Table

	Item	Specification
Basic specifications	Connectable actuators	RCA series actuator
	Input power supply	DC24V ±10%
	Power-supply capacity	Control power: 1.2A max. Motor power: Rating 1.7A / Peak 5A (per axis)
	Dielectric strength voltage	500VDC, 10MΩ or above
	Breakdown resistance	500VAC, 1 minute
	Rush current	30A max.
	Vibration resistance	XYZ directions One-side amplitude 0.035 mm (continuous), 0.075 g 4.9m/s2 (continuous), 0.8m/s2 (continuous)
Control specifications	Number of controlled axes	1 axis/2 axes
	Maximum total output of connected axes	60W (30W+30W)
	Position detection method	Incremental encoder / Absolute encoder
	Speed setting	From 1mm/s. The maximum limit varies depending on the actuator.
	Acceleration setting	From 0.01G. The maximum limit varies depending on the actuator.
	Operation method	Program operation / Positioner operation (switchable)
Program	Programming language	Super SEL language
	Number of programs	64 programs
	Number of program steps	2,000 steps
	Number of multi-tasking programs	8 programs
	Number of positioning points	1,500 points
	Data storage device	Flash ROM (A system-memory backup battery can be added as an option)
	Data input method	Teaching pendant or PC software
Communication	Number of I/O points	24 input points / 8 output points (NPN or PNP selectable)
	I/O power supply	Externally supplied 24VDC ± 10%
	PIO cable	CB-DS-PIO□□□(supplied with the controller)
	Serial communication function	RS232C (D-sub, half-pitch connector) / USB connector
	Field network	(To be supported in the future)
	Motor cable	CB-ACS-MA□□□(20m max.)
	Encoder cable	CB-ACS-PA□□□(20m max.)
General specifications	Protective functions	Motor overcurrent, motor driver temperature check, overload check, encoder open-circuit check, soft limit over, system error, battery error, etc.
	Ambient operating temperature, humidity	0~40°C 10~95% (non-condensing)
	Operating ambience	Free from corrosive gases. In particular, there shall be no significant powder dust.
	Protection class	IP20
	Weight	Approx. 450g
	External dimensions	43mm (W) ×159mm (H) ×110mm (D)

External Dimensions

Name of Each Part

1 Motor connector for axis 1

Connect the motor cable of the axis 1 actuator.

2 Motor connector for axis 2

Connect the motor cable of the axis 2 actuator.

3 Brake switch for axis 1

This switch is used to release the axis brake. Setting it to the left position (RLS side) forcibly releases the brake, while setting it to the right position (NOM side) causes the controller to automatically control the brake.

4 Encoder connector for axis 1

Connect the encoder cable of the axis 1 actuator.

5 Brake switch for axis 2

This switch is used to release the axis brake. Setting it to the left position (RLS side) forcibly releases the brake, while setting it to the right position (NOM side) causes the controller to automatically control the brake.

6 Encoder connector for axis 2

Connect the encoder cable of the axis 2 actuator.

7 Status indicator LEDs

These LEDs are used to indicate the operating condition of the controller.

Indication details are as follows:

PWR: This LED indicates that the controller is receiving power.

RDY: This LED indicates that the controller is ready to perform program operation.

ALM: This LED indicates that the controller is abnormal.

EMG: This LED indicates that an emergency stop is actuated and the drive source is cut off.

SV1: This LED indicates that the axis 1 actuator servo is on.

SV2: This LED indicates that the axis 2 actuator servo is on.

8 Panel unit connector

A connector for the panel unit (optional) that displays the controller status and error numbers.

9 I/O connector

A connector for interface I/Os.

A 34-pin flat connector is used for the DIO (24 IN/8 OUT) interface.

The I/O power is also supplied to the controller through this connector (pins 1 and 34).

10 Mode switch

This switch is used to specify the running mode of the controller. The left position indicates the MANU (manual operation) mode, while the right position indicates the AUTO (automatic operation) mode. Teaching can only be performed as manual operation, and automatic operation using external I/Os is not possible in the MANU mode.

11 USB connector

A connector for PC connection via USB. If the USB connector is connected, the TP connector is disabled and all communication inputs to the TP connector are cut off.

12 Teaching pendant (TP) connector

A half-pitch I/O 26-pin connector that connects a teaching pendant when the running mode is MANU. A special conversion cable is needed to connect a conventional D-sub, 25-pin connector.

13 System-memory backup battery connector

If you wish to retain the various data recorded in the SRAM of the controller even after the power is cut off, connect the necessary battery to this connector.

This battery is installed externally to the unit. The controller does not come standard with the battery (it must be specified as an option).

14 Motor power input connector

This connector is used to input the motor power. It consists of a 2-pin, 2-piece connector by Phoenix Contact.

15 External regenerative resistor connector

A connector for the regenerative resistor that must be connected when the built-in regenerative resistor alone does not offer sufficient capacity in high-acceleration/high-load operation, etc.

Whether or not an external regenerative resistor is necessary depends on the conditions of your specific application such as the axis configuration.

16 Control power/system input connector

This connector is used to connect the control power input, emergency stop switch, and enable switch.

It consists of a 6-pin, 2-piece connector by Phoenix Contact.

17 Absolute-data backup battery connector for axis 1

A connector for the battery that backs up absolute data when the actuator uses an absolute encoder. Secure installation of the battery is the customer's responsibility.

18 Absolute-data backup battery connector for axis 2

A connector for the battery that backs up absolute data when the actuator uses an absolute encoder. Secure installation of the battery is the customer's responsibility.

Teaching pendant

Features A teaching device providing program/position input function, test operation function, monitoring function, and more.

Model

Model	Description
IA-T-X-J	Standard type with connector conversion cable
IA-T-X	Standard type
IA-T-XD-J	Deadman switch type with connector conversion cable
IA-T-XD	Deadman switch type
IA-T-XA-J	ANSI type with connector conversion cable
IA-T-XA	ANSI type

IA-T-X/XD

IA-T-XA

Configuration

NOTE

The PSEL controller is supported by version 1.40 or later (or 1.30 or later with the ANSI type).

Conversion cable: CB-SEL-SJ002

Specifications

Item	IA-T-X/XD	IA-T-XA
Ambient operating temperature, humidity	Temperature 0~40°C, Humidity 85% RH or below	
Operating ambience	Free from corrosive gases. In particular, there shall be no significant powder dust.	Protective structure conforming to IP54
Weight	Approx. 650g	Approx. 600g (excluding cable)
Cable length	4m	5m
Display	LCD with 20 characters x 4 lines	LCD with 32 characters x 8 lines

PC Software (Windows Only)

Features A startup support software program offering program/position input function, test operation function, monitoring function, and more. The functions needed for debugging have been enhanced to help reduce the startup time.

Model IA-101-X-MW-J (with RS232C Cable + Connector Conversion Cable)

Configuration

NOTE

The PSEL controller is supported by version 7.0.0.0 or later.

Model IA-101-X-USB (with USB Cable)

Configuration

Options

Panel Unit

- Features** A display for checking controller error codes and active program numbers.

- Model** **PU-1**(Cable Length 3m)

Dummy plug

- Features** When connecting your SSEL controller to a PC using a USB cable, install this plug on the teaching port to cut off the enable circuit. (This plug comes with the PC software IA-101-X-USB.)

- Model** **DP-3**

Absolute-Data Backup Battery

- Features** This battery backs up absolute data when an absolute-type actuator is operated. Same as the system-memory backup battery.

- Model** **AB-5**

USB cable

- Features** Use this cable to connect your controller with USB port to a PC. If your controller has no USB port (XSEL), connect a RS232C cable to a USB cable via a USB conversion adapter and connect the USB cable to the USB port on the PC. (Refer to the PC software IA-101-X-USBMW.)

- Model** **CB-SEL-USB010** (Cable Length 1m)

System-Memory Backup Battery

- Features** If your programs use global flags, etc., you need this battery to retain data even after the power is turned off.

- Model** **AB-5-CS (with Case)**
AB-5 (Battery Only)

Connector conversion cable

- Features** This conversion cable is used to connect a D-sub, 25-pin connector for teaching pendant or PC software to the teaching connector (half-pitch) on the ASEL controller.

- Model** **CB-SEL-SJ002** (Cable Length 0.2m)

Spare Parts

Should you require spare parts after the purchase of your product for replacing the original cables, etc., refer to the model names specified below.

Motor Cable

Model **CB-ACS-MA**

* The standard motor cable is a robot cable. * indicates the cable length (L). Lengths up to 20 m can be specified. Example) 080 = 8 m

Encoder Cable/ Encoder Robot Cable

Model **CB-ACS-PA** / **CB-ACS-PA** -RB

* The standard encoder cable is a normal cable. * indicates the cable length (L). Lengths up to 20 m can be specified. A robot cable can be specified as an option. Example) 080 = 8 m

I/O Flat Cable

Model **CB-DS-PIO**

* indicates the cable length (L). Lengths up to 20 m can be specified. Example) 080 = 8 m

No.	Color	Wire	No.	Color	Wire

9A	Purple2		17B	Yellow4	

SSEL

RCS2 series
Program controller

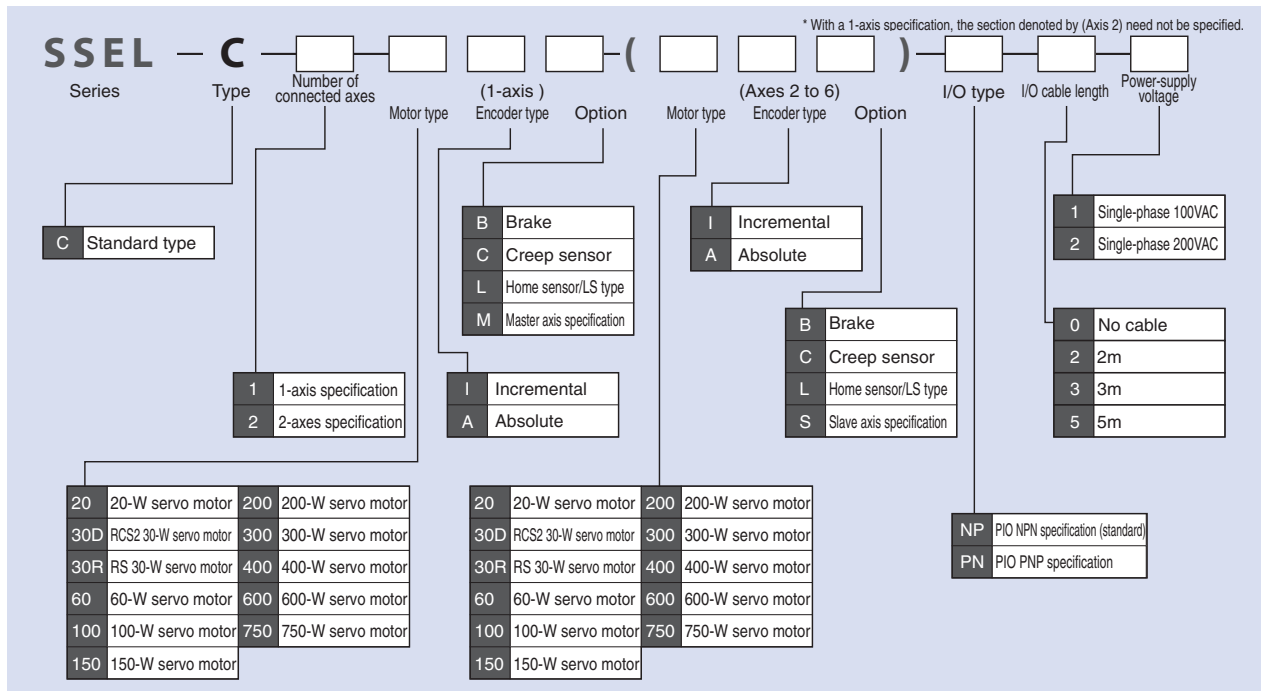

Type List

Program controller capable of operating RCS2 series actuator. Various control functions are combined into a single unit.

Type	C	
Name	Program mode	Positioner mode
External view		
Description	Both actuator operation and communication with external equipment can be handled by a single controller. When two axes are connected, arc interpolation and path operation can be performed.	Up to 1,500 positioning points are supported. Push-motion operation and teaching operation are also possible.
Number of position points	1,500 positions	

Model

System Configuration

I/O Specifications

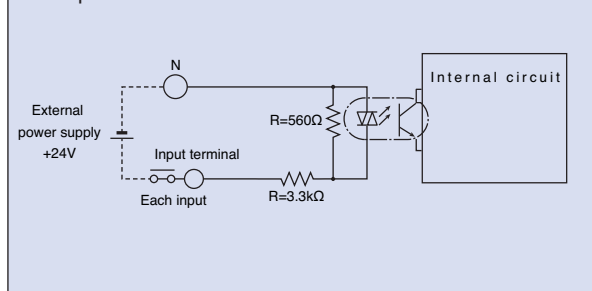

Input Part External input specifications

Item	Specification
Input voltage	DC24V 10%
Input current	7mA/1circuit
ON/OFF voltage	ON voltage (Min.) NPN:DC16V/PNP:DC8V OFF voltage (Max.) NPN:DC5V/PNP:DC19V
Insulation method	Photocoupler

NPN specification

PNP specification

Output Part External output specifications.

Item	Specification
Load voltage	DC24V
Max. load current	1mA/point 400mA/8point total
Leak current	Max. 0.1mA/1point
Insulation method	Photocoupler

NPN specification

PNP specification

Explanation of I/O Functions

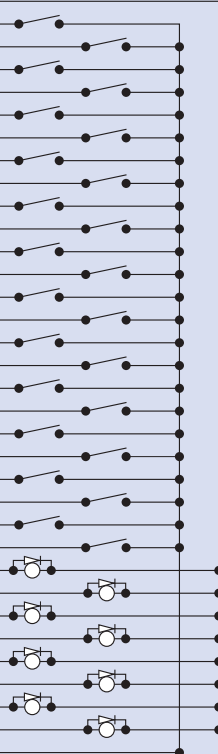

The SSEL controller lets you select either the “program mode” in which the actuator is operated by programs input to the controller, or the “positioner mode” in which the actuator moves to the positions specified by PLC signals received from the host. The positioner mode provides the following five input patterns each supporting different applications.

Controller Functions by Type

Operation mode		Features
Program mode		Various operations including linear/arc interpolation operation, path operation ideal for coating processes, etc., arch-motion operation and palletizing operation can be performed using the Super SEL language that lets you program complex control actions using simple commands.
Positioner mode	Standard mode	A basic operation mode in which a position number is specified and then a start signal is input to start operation. Push-motion operation and 2-axis linear interpolation operation are also supported.
	Product-type switchover mode	Multiple works of the same shape with slightly different hole positions can be handled using movement commands to the same position numbers by simply changing the product type number.
	2-axis independent mode	With a 2-axis controller, each axis can be commanded and operated separately.
	Teaching mode	The slider (rod) can be moved via an external signal to store the achieved position as position data.
	DS-S-C1 compatible mode	If you were using a DS-S-C1 controller before, you can replace it with a PSEL controller without having to change the host programs. * This mode does not ensure actuator compatibility.

Explanation of I/O Functions

Program mode

Pin number	Category	Port number	Program mode	Function	Wiring diagram	
1A	P24		24-V input	Connect 24V.		
1B		016	Program No. 1 selection	These signals are used to select the program to be started. (BCD input using ports 016 to 022)		
2A		017	Program No. 2 selection			
2B		018	Program No. 4 selection			
3A		019	Program No. 8 selection			
3B		020	Program No. 10 selection			
4A		021	Program No. 20 selection			
4B		022	Program No. 40 selection			
5A		023	CPU reset	This signal is used to reset the system to create the same condition after power reconnection.		
5B		000	Start	This signal is used to start the program selected by port Nos. 016 to 022.		
6A		Input	001	General-purpose input		These signals are used with a program command to wait for external input.
6B			002	General-purpose input		
7A			003	General-purpose input		
7B			004	General-purpose input		
8A			005	General-purpose input		
8B			006	General-purpose input		
9A			007	General-purpose input		
9B			008	General-purpose input		
10A			009	General-purpose input		
10B			010	General-purpose input		
11A			011	General-purpose input		
11B			012	General-purpose input		
12A			013	General-purpose input		
12B			014	General-purpose input		
13A	015		General-purpose input			
13B	300		Alarm	This signal is output upon an alarm. (Contact B)		
14A	Output	301	Ready	This signal is output once the controller has started properly and entered a ready state.		
14B		302	General-purpose output	These signals can be turned ON/OFF freely using program commands.		
15A		303	General-purpose output			
15B		304	General-purpose output			
16A		305	General-purpose output			
16B		306	General-purpose output			
17A		307	General-purpose output			
17B	N		0-V input	Connect 0V.	OV 24	

Positioner, Standard Mode

Pin number	Category	Port number	Positioner, standard mode	Function	Wiring diagram		
1A	P24		24-V input	Connect 24V.			
1B		016	Position input 10	Port Nos. 007 to 019 are used to specify a target position number. Numbers can be specified either as BCD or binary codes.			
2A		017	Position input 11				
2B		018	Position input 12				
3A		019	Position input 13				
3B		020	—	—			
4A		021	—	—			
4B		022	—	—			
5A		023	Error reset	This signal is used to reset minor errors. (The power must be reconnected to reset serious errors.)			
5B		000	Start	This signal is used to cause the actuator to start moving to the selected position.			
6A		001	Home return	This signal is used to perform home return.			
6B		002	Servo ON	This signal is used to switch the servo on/off.			
7A		Input	003	Push		This signal is used to perform push-motion operation.	
7B			004	Pause		When this signal is turned OFF while the actuator is moving, the actuator will pause. When the signal is turned ON, the actuator will resume and complete the remaining operation.	
8A			005	Cancellation		When this signal is turned OFF while the actuator is moving, the actuator will stop and the remaining operation will be cancelled.	
8B			006	Interpolation setting		With a 2-axis specification, turning ON this signal causes the actuator to move via linear interpolation.	
9A			007	Position input 1		Port Nos. 007 to 019 are used to specify a target position number. Numbers can be specified either as BCD or binary codes.	
9B			008	Position input 2			
10A			009	Position input 3			
10B			010	Position input 4			
11A			011	Position input 5			
11B			012	Position input 6			
12A		013	Position input 7				
12B		014	Position input 8				
13A	015	Position input 9					
13B	Output	300	Alarm	This signal is output upon an alarm. (Contact B)			
14A		301	Ready	This signal is output once the controller has started properly and entered a ready state.			
14B		302	Position complete	This signal is output upon completion of movement to the specified position.			
15A		303	Home return complete	This signal is output upon completion of home return.			
15B		304	Servo ON output	This signal is output while the servo is on.			
16A		305	Push motion complete	This signal is output upon completion of push-motion operation.			
16B		306	System-memory backup battery error	This signal is output when the system-memory backup battery voltage has dropped (to the warning level).			
17A		307	Absolute-data backup battery error	This signal is output when the absolute-data backup battery voltage has dropped (to the warning level).			
17B	N		0-V input	Connect 0V.			

Positioner, Product-Type Swchover Mode

Wiring diagram

Wiring diagram

Explanation of I/O Functions

Positioner, Teaching Mode

Pin number	Category	Port number	Positioner	Function	Wiring diagram	
1A	Input	P24	24-V input	Connect 24V.		
1B			Axis 1 JOG-	While this signal is input, axis 1 moves in the negative direction.		
2A			Axis 2 JOG+	While this signal is input, axis 2 moves in the positive direction.		
2B			Axis 2 JOG-	While this signal is input, axis 2 moves in the negative direction.		
3A			Inching specification (0.01mm)	These signals are used to specify an inching travel distance. (The travel distance is the sum of values specified by port Nos. 019 to 022.)		
3B			Inching specification (0.1mm)			
4A			Inching specification (0.5mm)			
4B			Inching specification (1mm)			
5A			023	Error reset		This signal is used to reset minor errors. (The power must be reconnected to reset serious errors.)
5B			000	Start		This signal is used to cause the actuator to start moving to the selected position.
6A			001	Servo ON		This signal is used to switch the servo on/off.
6B			002	Pause		When this signal is turned OFF while the actuator is moving, the actuator will pause. When the signal is turned ON, the actuator will resume and complete the remaining operation.
7A			003	Position input 1		Port Nos. 003 to 013 are used to specify a target position number and a position number under which to input the current position.
7B			004	Position input 2		
8A			005	Position input 3		
8B			006	Position input 4		
9A			007	Position input 5		When the teaching mode specification signal at port No. 014 is ON, the current value will be written under the specified position number upon turning ON of the start signal at port No. 000.
9B			008	Position input 6		
10A			009	Position input 7		
10B			010	Position input 8		
11A			011	Position input 9		When the teaching mode specification signal at port No. 014 is ON, the current value will be written under the specified position number upon turning ON of the start signal at port No. 000.
11B			012	Position input 10		
12A			013	Position input 11		
12B			014	Teaching mode specification		
13A			015	Axis 1 JOG+		While this signal is input, axis 1 moves in the positive direction.
13B			300	Alarm		This signal is output upon an alarm. (Contact B)
14A	301	Ready	This signal is output once the controller has started properly and entered a ready state.			
14B	302	Position complete	This signal is output upon completion of movement to the specified position.			
15A	303	Home return complete	This signal is output upon completion of home return.			
15B	304	Servo ON output	This signal is output while the servo is on.			
16A	305	-	-			
16B	306	System-memory backup battery error	This signal is output when the system-memory backup battery voltage has dropped (to the warning level).			
17A	307	Absolute-data backup battery error	This signal is output when the absolute-data backup battery voltage has dropped (to the warning level).			
17B	N		0-V input	Connect 0V.		

Positioner, DS-S-C1 Compatible Mode

Pin number	Category	Port number	Positioner	Function	Wiring diagram
1A	Input	P24	24-V input	Connect 24V.	

Specification Table

	Item	Specification	
Basic specifications	Connectable actuators	RCS2 series actuator / Single-axis robot / Linear servo actuator	
	Input power supply	Single-phase 100VAC $\pm 10\%$	Single-phase 200VAC $\pm 10\%$
	Power-supply capacity	1,660VA max. (400W, 2 axes operated)	
	Dielectric strength voltage	500VDC, 10M Ω or above	
	Breakdown resistance	500VAC, 1 minute	
	Rush current	30A max.	
Control specifications	Vibration resistance	XYZ directions	One-side amplitude 0.035 mm (continuous), 0.075 (intermittent) 4.9m/s ² (continuous), 9.8m/s ² (intermittent)
	Number of controlled axes	1 axis/2 axes	
	Maximum total output of connected axes	400W	800W
	Position detection method	Incremental encoder / Absolute encoder	
	Speed setting	From 1mm/s. The maximum limit varies depending on the actuator.	
	Acceleration setting	From 0.01G. The maximum limit varies depending on the actuator.	
Program	Operation method	Program operation / Positioner operation (switchable)	
	Programming language	Super SEL language	
	Number of programs	64 programs	
	Number of program steps	2,000 steps	
	Number of multi-tasking programs	8 programs	
	Number of positioning points	1,500 points	
Communication	Data storage device	Flash ROM (A system-memory backup battery can be added as an option)	
	Data input method	Teaching pendant or PC software	
	Number of I/O points	24 input points / 8 output points (NPN or PNP selectable)	
	I/O power supply	Externally supplied 24VDC $\pm 10\%$	
	PIO cable	CB-DS-PIO □□□ (supplied with the controller)	
	Serial communication function	RS232C (D-sub, half-pitch connector) / USB connector	
General specifications	Field network	(To be supported in the future)	
	Motor cable	CB-RCC-MA □□□ (20m max.)	
	Encoder cable	CB-RCS2-PA □□□ (20m max.)	
	Protective functions	Motor overcurrent, motor driver temperature check, overload check, encoder open-circuit check, soft limit over, system error, battery error, etc.	
	Ambient operating temperature, humidity	0~40°C 10~95% (non-condensing)	
	Operating ambience	Free from corrosive gases. In particular, there shall be no significant powder dust.	
Gateway unit	Protection class	IP20	
	Weight	1.4kg	
	External dimensions	100mm (W) x202.6mm (H) x126mm (D)	

External Dimensions

Name of Each Part

**1** Status indicator LEDs

These LEDs are used to indicate the operating condition of the controller.

Indication details are as follows:

- PWR: This LED indicates that the controller is receiving power.
- RDY: This LED indicates that the controller is ready to perform program operation.
- ALM: This LED indicates that the controller is abnormal.
- EMG: This LED indicates that an emergency stop is actuated and the drive source is cut off.
- SV1: This LED indicates that the axis 1 actuator servo is on.
- SV2: This LED indicates that the axis 2 actuator servo is on.

2 System I/O connector

A connector for the emergency stop input, enable input, brake power input, etc.

3 Teaching pendant (TP) connector

A half-pitch I/O 26-pin connector that connects a teaching pendant when the running mode is MANU. A special conversion cable is needed to connect a conventional D-sub, 25-pin connector.

4 Mode switch

This switch is used to specify the running mode of the controller.

The left position indicates the MANU (manual operation) mode, while the right position indicates the AUTO (automatic operation) mode.

Teaching can only be performed as manual operation, and automatic operation using external I/Os is not possible in the MANU mode.

5 USB connector

A connector for PC connection via USB. If the USB connector is connected, the TP connector is disabled and all communication inputs to the TP connector are cut off.

6 I/O connector

A connector for interface I/Os.

A 34-pin flat connector is used for the DIO (24 IN/8 OUT) interface.

The I/O power is also supplied to the controller through this connector (pins 1 and 34).

7 Panel unit connector

A connector for the panel unit (optional) that displays the controller status and error numbers.

8 Absolute-data backup battery

When an absolute-type axis is operated, this battery retains position data even after the power is cut off.

9 System-memory backup battery (optional)

This battery is needed if you wish to retain various data recorded in the SRAM of the controller even after the power is cut off. This battery is optional. Specify it if necessary.

10 Power-supply connector

An AC power-supply connector. Divided into the control power input and motor power input.

11 Grounding screw

A screw for protective grounding. Always connect this screw to ground.

12 External regenerative resistor connector

A connector for the regenerative resistor that must be connected when the built-in regenerative resistor alone does not offer sufficient capacity in high-acceleration/high-load operation, etc.

Whether or not an external regenerative resistor is necessary depends on the conditions of your specific application such as the axis configuration.

13 Motor connector for axis 1

Connect the motor cable of the axis 1 actuator.

14 Motor connector for axis 2

Connect the motor cable of the axis 2 actuator.

15 Brake switch for axis 1

This switch is used to release the axis brake. Setting it to the left position (RLS side) forcibly releases the brake, while setting it to the right position (NOM side) causes the controller to automatically control the brake.

16 Brake switch for axis 2

This switch is used to release the axis brake. Setting it to the left position (RLS side) forcibly releases the brake, while setting it to the right position (NOM side) causes the controller to automatically control the brake.

17 Encoder connector for axis 1

Connect the encoder cable of the axis 1 actuator.

18 Encoder connector for axis 2

Connect the encoder cable of the axis 2 actuator.

19 Absolute-data backup battery connector for axis 1

A connector for the battery that backs up absolute data when the actuator uses an absolute encoder. Secure installation of the battery is the customer's responsibility.

20 Absolute-data backup battery connector for axis 2

A connector for the battery that backs up absolute data when the actuator uses an absolute encoder. Secure installation of the battery is the customer's responsibility.

21 System-memory backup battery connector

A connector for the system-memory backup battery.

Option

Teaching pendant

- Features** A teaching device providing program/position input function, test operation function, monitoring function, and more.

Model

Model	Description
IA-T-X-J	Standard type with connector conversion cable
IA-T-X	Standard type
IA-T-XD-J	Deadman switch type with connector conversion cable
IA-T-XD	Deadman switch type
IA-T-XA-J	ANSI type with connector conversion cable
IA-T-XA	ANSI type

Configuration

IA-T-X/XD

IA-T-XA

Specifications

Item	IA-T-X/XD	IA-T-XA
Ambient operating temperature, humidity	Temperature 0~40°C, Humidity 85% RH or below	
Operating ambience	Free from corrosive gases. In particular, there shall be no significant powder dust.	Protective structure conforming to IP54
Weight	Approx. 650g	Approx. 600g (excluding cable)
Cable length	4m	5m
Display	LCD with 20 characters x 4 lines	LCD with 32 characters x 8 lines

PC Software (Windows Only)

- Features** A startup support software program offering program/position input function, test operation function, monitoring function, and more. The functions needed for debugging have been enhanced to help reduce the startup time.

- Model** **IA-101-X-MW-J (with RS232C Cable + Connector Conversion Cable)**
IA-101-X-MW (with RS232C Cable)

Configuration

- Model** **IA-101-X-USB (with USB Cable)**

Configuration

NOTE
 The SSEL controller is supported by version 6.0.0.0 or later.

Regenerative Resistor Unit

- Features** This unit converts to heat the regenerative current produced when the motor decelerates. Use the table shown to the right to check the total wattage of actuators operated by the controller, and purchase one or more regenerative resistor units if required.

- Model** **REU-2 (SCON/SSEL)**

Specifications

Weight	0.9kg
Built-in regenerative resistor	220Ω 80W
Unit-controller connection cable (supplied)	CB-SC-REU010 (SSEL)

Guide for Determining Necessary Number of Units

	Horizontal	Vertical
0 unit	~800W	~200W
1 unit	~600W	~600W
2 units	~800W	~800W

* More regenerative resistor units than the numbers specified above may be required depending on the operating conditions.

External Dimensions

Panel Unit

- Features** A display for checking controller error codes and active program numbers.

- Model** **PU-1 (Cable Length 3m)**

Absolute-Data Backup Battery

- Features** This battery backs up absolute data when an absolute-type actuator is operated. Same as the system-memory backup battery.

- Model** **AB-5**

System-Memory Backup Battery

- Features** If your programs use global flags, etc., you need this battery to retain data even after the power is turned off.

- Model** **AB-5-CS (with Case)**
AB-5 (Battery Only)

Options

Dummy plug

- **Features** When connecting your SSEL controller to a PC using a USB cable, install this plug on the teaching port to cut off the enable circuit. (This plug comes with the PC software IA-101-X-USB.)

■ **Model** DP-3

USB cable

- **Features** Use this cable to connect your controller with USB port to a PC.
If your controller has no USB port (XSEL), connect a RS232C cable to a USB cable via a USB conversion adapter and connect the USB cable to the USB port on the PC.
(Refer to the PC software IA-101-X-USBMW.)

■ **Model** CB-SEL-USB010 (Cable Length 1m)

Connector conversion cable

- **Features** This conversion cable is used to connect a D-sub, 25-pin connector for teaching pendant or PC software to the teaching connector (half-pitch) on the ASEL controller.

■ **Model** CB-SEL-SJ002 (Cable Length 0.2m)

Spare Parts

Should you require spare parts after the purchase of your product for replacing the original cables, etc., refer to the model names specified below.

Motor Cable/ Motor Robot Cable

Model **CB-RCC-MA**□□□ / **CB-RCC-MA**□□□-**RB**

* □□□ indicates the cable length (L). Lengths up to 30 m can be specified.
Example) 080 = 8 m

Wire	Color	Signal	No.	No.	Signal	Color	Wire
0.75sq	Green	PE	1	1	U	Red	0.75sq
	Red	U	2	2	V	White	
	White	V	3	3	W	Black	
	Black	W	4	4	PE	Green	

Encoder Cable/ Encoder Robot Cable

Model **CB-RCS2-PA**□□□ / **CB-X2-PA**□□□

* □□□ indicates the cable length (L). Lengths up to 30 m can be specified.
Example) 080 = 8 m

Wire	Color	Signal	No.	No.	Signal	Color	Wire
AWG26 (solid)	Green	PE	1	1	U	Red	0.75sq
	Red	U	2	2	V	White	
	White	V	3	3	W	Black	
	Black	W	4	4	PE	Green	

Encoder Cable/ Encoder Robot Cable for RCS2-RT6/RT6R/RT7R

Model **CB-RCS2-PLA**□□□ / **CB-X2-PLA**□□□

* □□□ indicates the cable length (L). Lengths up to 30 m can be specified.
Example) 080 = 8 m

Wire	Color	Signal	No.	No.	Signal	Color	Wire
AWG26 (solid)	Green	PE	1	1	U	Red	0.75sq
	Red	U	2	2	V	White	
	White	V	3	3	W	Black	
	Black	W	4	4	PE	Green	

I/O Flat Cable (SSEL Types)

Model **CB-DS-PIO**□□□

* □□□ indicates the cable length (L). Lengths up to 10 m can be specified.
Example) 080 = 8 m

No.	Color	Wire	No.	Color	Wire
1A	Brown1		9B	Gray2	
1B	Red1		10A	White2	
2A	Orange1		10B	Black2	
2B	Yellow1		11A	Brown-3	
3A	Green1		11B	Red3	
3B	Blue1		12A	Orange3	
4A	Purple1		12B	Yellow3	
4B	Gray1		13A	Green3	
5A	White1		13B	Blue3	
5B	Black1		14A	Purple3	
6A	Brown-2		14B	Gray3	
6B	Red2		15A	White3	
7A	Orange2		15B	Black3	
7B	Yellow2		16A	Brown-4	
8A	Green2		16B	Red4	
8B	Blue2		17A	Orange4	
9A	Purple2		17B	Yellow4	

RCS2 Series
Program controller

Multi-axis program controller for RCS2 series actuator. Up to six axes can be controlled simultaneously.

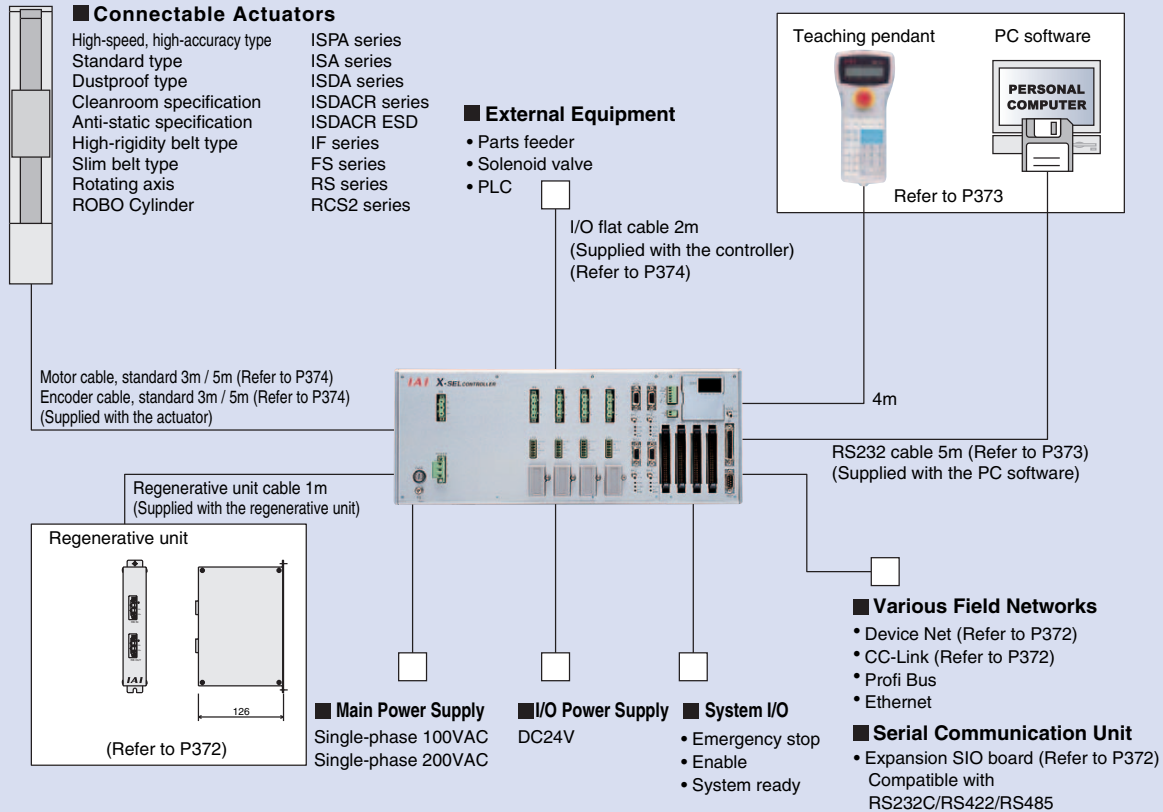

Type	J	K	P	Q
Name	Compact type	General-purpose type	Large-capacity type	Large-capacity type (meeting safety category)
External view				
Description	Compact, low-cost type ideal for operating low-output actuators	Standard type offering excellent expandability	Large-capacity type capable of controlling up to six axes or 2,400 W	Large-capacity type conforming to safety category 4
Maximum number of controlled axes	4 axes		6 axes	
Number of position points	3,000 positions		4,000 positions	
Total connectable wattage	800W	1600W	2400W	
Power supply	Single-phase 100VAC / Single-phase 200VAC		Three-phase 200VAC	
Safety category	B		B	Conforming to safety category 4
Safety standard	—	—	CE	CE, ANSI

* To specify multiple options, enter them in alphabetical order. (Example: Brake + Home sensor → BL)

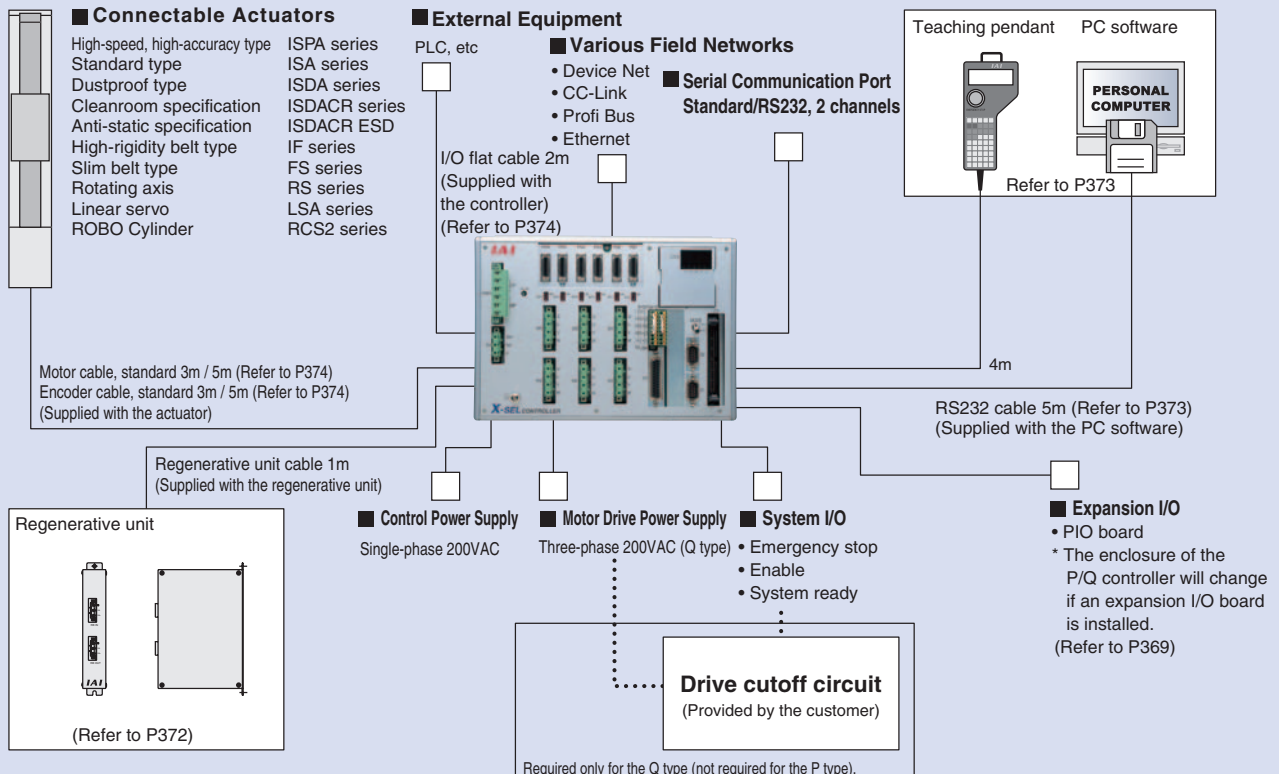

System Configuration

J (Compact) / K (General-Purpose) / KE (CE) Types

P (Large-Capacity) / Q (Large-Capacity Global) Types

I/O Wiring Diagram

Input Part External input specifications (NPN specifications)

Item	Specification
Input voltage	24VDC $\pm 10\%$
Input current	7mA / 1 circuit
ON/OFF voltage	ON voltage...Min DC16.0V OFF voltage...Max DC5.0V
Insulation method	Photocoupler insulation
Externally connected equipment	1 No-voltage contacts (minimum load of approx. 5VDC, 1mA) 2 Photoelectric/proximity sensor (NPN type) 3 Sequencer transistor output (open collector type) 4 Sequencer contact output (minimum load of approx. 5VDC, 1mA)

Input Part External input specifications (PNP specifications)

Item	Specification
Input voltage	24VDC $\pm 10\%$
Input current	7mA / 1 circuit
ON/OFF voltage	ON voltage...Min DC8V OFF voltage...Max DC19V
Insulation method	Photocoupler insulation
Externally connected equipment	1 No-voltage contacts (minimum load of approx. 5VDC, 1mA) 2 Photoelectric/proximity sensor (PNP type) 3 Sequencer transistor output (open collector type) 4 Sequencer contact output (minimum load of approx. 5VDC, 1mA)

Output Part External output specifications (NPN specifications)

Item	Specification
Load voltage	24VDC
Maximum load current	100mA / 1 circuit 400mA
Leak current	Peak (full current)
Insulation method	Photocoupler insulation
Externally connected equipment	1 Miniature relay 2 Sequencer input unit

Output Part External output specifications (PNP specifications)

Item	Specification
Load voltage	24VDC
Maximum load current	100mA / 1 circuit 400mA/8 ports (Note)
Leak current	Max 0.1mA / 1point
Insulation method	Photocoupler insulation
Externally connected equipment	1 Miniature relay 2 Sequencer input unit

(Note) 400 mA represents the maximum total load current for each set of eight ports from output port No. 300. (The maximum total current output for output port Nos. 300+n to No. 300+n+7 must be 400 mA, where n = 0 or a multiple of eight.)

Specification Table

J (Compact) / K (General-Purpose) Types

Item	Description							
Controller series, type	J (compact) type				K (general-purpose) type / KE (CE) type			
Connectable actuators	RCS2 / ISA / ISPA / ISP / ISDA / ISDACR / ISPDACR / IF / FS / RS							
Motor output (W)	20 / 30 / 60 / 100 / 150 / 200 / 300 / 400 / 600 / 750							
Number of controlled axes	1 axis	2 axes	3 axes	4 axes	1 axis	2 axes	3 axes	4 axes
Maximum output of connected axes (W)	Max800(at power-supply voltage of 200V) Max400(at power-supply voltage of 100V)				Max 800	Max1600(at power-supply voltage of 200V) Max800(at power-supply voltage of 100V)		
Input power supply	100-V specification: Single-phase 100~115VAC 200-V specification: Single-phase 200~230VAC							
Operating power-supply voltage range	±10%							
Power-supply frequency	50Hz/60Hz							
Power-supply capacity	Max 1670VA		Max 1720VA	Max 1810VA	Max 1670VA	Max 3120VA	Max 3220VA	Max 3310VA
Position detection method	Incremental encoder (wire-saving type) Absolute encoder with rotation data backup (wire-saving type)							
Speed setting	From 1mm/s. The maximum limit varies depending on the actuator.							
Acceleration setting	From 0.01G. The maximum limit varies depending on the actuator.							
Programming language	Super SEL language							
Number of programs	64 programs							
Number of program steps	6,000 steps (total)							
Number of multi-tasking programs	16 programs							
Number of positioning points	3,000 positions							
Data storage device	Flash ROM + SRAM battery backup							
Data input method	Teaching pendant or PC software							
Standard inputs/outputs	32 points (total of dedicated inputs + general-purpose inputs) / 16 points (total of dedicated outputs + general-purpose outputs)							
Expansion inputs/outputs	None	48 points per unit (1 unit can be added)			48 points per unit (Up to 3 units can be added)			
Serial communication function	RS232 port (D-sub, 25-pin) – Standard accessory				Standard RS232 port + Expansion SIO board (optional)			
Other inputs/outputs	System I/Os (emergency stop input, enable input, system ready output)							
Protective functions	Motor overcurrent, overload, motor driver temperature check, overload check, encoder open-circuit check, soft limit over, system error, battery error, etc.							
Ambient operating temperature, humidity	Temperature 0~40°C, humidity 30~85% (non-condensing)							
Operating ambience	Free from corrosive gases. In particular, there shall be no significant powder dust.							
Weight	2.6kg	3.3kg	5.0kg		6.0kg		7.0kg	
Accessory	I/O flat cable							

P (Large-Capacity) / Q (Large-Capacity Meeting Safety Category) Types

Item	Description											
Controller series, type	P (standard) type						Q (global) type					
Connectable actuators	RCS2 / ISA / ISPA / ISP / ISDA / ISDACR / ISPDACR / IF / FS / RS / LSA											
Motor output (W)	20 / 30 / 60 / 100 / 150 / 200 / 300 / 400 / 600 / 750											
Number of controlled axes	1 axis	2 axes	3 axes	4 axes	5 axes	6 axes	1 axis	2 axes	3 axes	4 axes	5 axes	6 axes
Maximum output of connected axes (W)	Max2400W											
Control power input	AC200 / 230 Single-phase -15%, +10%						AC200 / 230 Single-phase -15%, +10%					
Motor power input	AC200 / 230 Three-phase -10%, +10%						AC200 / 230 Three-phase -10%, +10%					
Power-supply frequency	50 / 60Hz											
Dielectric strength voltage	10MΩ or more (between the power-supply terminal and I/O terminals, and between all external terminals and case, at 500VDC)											
Breakdown voltage	1,500VAC (1 minute)						1,500VAC (1 minute)					
Power-supply capacity	Max 1744VA	Max 3266VA	Max 4787VA	Max 4878VA	Max 4931VA	Max 4998VA	Max 1744VA	Max 3266VA	Max 4787VA	Max 4878VA	Max 4931VA	Max 4998VA
Position detection method	Incremental encoder (wire-saving type) Absolute encoder with rotation data backup (wire-saving type)											
Safety circuit configuration	Redundancy not supported						Redundancy supported					
Drive-source cutoff method	Internal cutoff relay						External safety circuit					
Enable input	Contact-B input (powered internally)						Contact-B input (powered externally, redundant)					
Speed setting	From 1mm/s. The maximum limit varies depending on the actuator.											
Acceleration/deceleration setting	From 0.01G. The maximum limit varies depending on the actuator.											
Programming language	Super SEL language											
Number of programs	64 programs											
Number of program steps	6,000 steps (total)											
Number of multi-tasking programs	16 programs											
Number of positioning points	4,000 steps (total)											
Data storage device	Flash ROM + SRAM battery backup											
Data input method	Teaching pendant or PC software											
Standard inputs/outputs	PIO board with 48 input/output points (NPN/PNP) or PIO board with 96 input/output points (NPN/PNP) – 1 board can be installed											
Expansion inputs/outputs	PIO board with 48 input/output points (NPN/PNP) or PIO board with 96 input/output points (NPN/PNP) – Up to 3 boards can be installed											
Serial communication function	Teaching port (D-sub, 25-pin) + 2-channel RS232C port (D-sub, 9-pin x 2) – Standard accessory											
Protective functions	Motor overcurrent, overload, motor driver temperature check, overload check, encoder open-circuit check, soft limit over, system error, battery error, etc.											
Ambient operating temperature, humidity	0~40°C, 10~95% (non-condensing). Free from corrosive gases. In particular, there shall be no significant powder dust.											
Weight	5.2kg					5.7kg		4.5kg			5kg	
Accessory	I/O flat cable											

*1 When the connected axes represent the maximum wattage.

*2 Including the absolute-data backup battery, brake mechanism and expansion I/O box.

External Dimensions

■ J (Compact) / K (General-Purpose) Types

	1-axis specification	2-axis specification	3/4-axis specification	Side view
J type (Compact)				
K type (General-Purpose)				

■ P (Large-Capacity Standard) / Q (Large-Capacity Global) Types

The XSEL-P/Q types have different shapes and dimensions in accordance with the controller specifications (encoder type, with/without brake, and with/without I/O expansion).

The four possible shapes are shown below. Check the dimensions of the controller type and number of axes you desire.

		Basic shape (incremental specification)	With brake/absolute unit	With I/O expansion base	With brake/absolute unit + I/O expansion base	Side view
Controller specifications	Encoder	Incremental	Absolute	Incremental	Absolute	
	Brake	Without	With	Without	With	
	I/O	Standard only	Standard only	Standard + Expansion	Standard + Expansion	
P (Large- Capacity)	1 to 4-axis specification					
	5 to 6-axis specification					
Q (Large- Capacity Meeting Safety Category)	1 to 4-axis specification					
	5 to 6-axis specification					

Name of Each Part

J Type (Compact)

1 FG connection terminal

A terminal for connecting to the FG terminal on the enclosure. The PE at the AC input part is connected to the enclosure inside the controller.

2 Fuse holder (K type only)

A half-cut fuse holder provided for overcurrent protection of the AC input part.

3 Main power input connector

A connector for 100/200-VAC single-phase input. (The cable comes with a matching plug. Refer to the facing page.)

4 Regenerative resistor unit connector

A connector for the regenerative resistor unit (optional/REU-1) that must be connected when the built-in regenerative resistor alone does not offer sufficient capacity in high-acceleration/high-load operation, etc.

5 Motor cable connector

A connector for the motor power-supply cable of the actuator.

6 Actuator sensor input connector

A connector for axis sensors such as LS, CREEP and OT.

7 Absolute-data backup battery

A battery unit for backing up the encoder when an absolute encoder is used. This battery is not connected for a non-absolute axis.

8 Brake release switch (brake specification only)

An alternate switch with lock for releasing the axis brake. Pull the switch forward and then tilt it up or down. Set the switch to the top position (RLS) to forcibly release the brake, or to the bottom position (NOM) to have the brake automatically controlled by the controller.

9 Axis driver status LEDs

These LEDs are used to monitor the operating status of the driver CPU that controls the motor drive.

The following three LEDs are available.

Name	Color	Meaning when the LED is lit
ALM	Orange	The driver has detected an error.
SVON	Green	The servo is on and the motor is driven.
BATT ALM	Orange	The absolute-data backup battery voltage is low.

10 Encoder cable connector

A 15-pin, D-sub connector for the actuator's encoder cable.

K Type (General-Purpose)

11 System I/O connector

A connector for three input/output points including two inputs used to control controller operation, and one system status output. (The cable comes with a matching plug. Refer to the facing page.)

Name		
EMG	Emergency stop input	ON: The controller is ready. OFF: An emergency stop is actuated.
ENB	Safety gate input	ON: The controller is ready. OFF: The servo is off.
RDY	System ready relay output	This signal outputs the status of this controller. Cascade connection is supported. Shorted: Ready. Open: Not ready.

12 I/O 24-V power-supply connector (K type only)

If DI and DOs are installed in the I/O boards (16 and 17), this connector is used to externally supply the I/O power for the insulated part.

13 Panel window

This window has a 4-digit, 7-segment LED and five LED lamps showing the system status.

14 Mode switch

This alternate switch with lock is used to specify the running mode of the controller. Pull the switch forward and then tilt it up or down. The top position indicates the MANU (manual operation) mode, while the bottom position indicates the AUTO (automatic operation) mode. Teaching can only be performed as manual operation, and automatic operation using external I/Os is not possible in the MANU mode.

15 Teaching connector

A D-sub, 25-pin connector for connecting a teaching pendant or PC to input program positions.

16 Standard I/O slot (slot 1)

The controller comes standard with a PIO board offering 32 input points and 16 output points.

17 Expansion I/O slots (slot 2, slot 3, slot 4)

Install an expansion I/O board in each of these slots. (Optional)

P type (Standard, 4 axes)

1 FG connection terminal

A terminal for connecting to the FG terminal on the enclosure. The PE at the AC input part is connected to the enclosure inside the controller.

2 External regenerative unit connector

A connector for the regenerative resistor that must be connected when the built-in regenerative resistor alone does not offer sufficient capacity in high-acceleration/high-load operation, etc. Whether or not an external regenerative resistor is necessary depends on the conditions of your specific application such as the axis configuration.

3 AC power input connector

A three-phase 200-VAC input connector. It consists of six terminals including motor power-supply, control power-supply and PE terminals. The controller only comes standard with a terminal block.

Note Do not touch the connector while the power is supplied, as it may cause electric shock.

4 Control power-supply monitor LED

A green light illuminates while the control power supply is properly generating internal controller power.

5 Enable/disable switch for absolute-data backup battery

This switch is used to enable or disable encoder backup using the absolute-data backup battery. Encoder backup has been disabled prior to the shipment. After connecting the encoder/axis-sensor cables, turn on the power, and then set this switch to the top position.

6 Encoder/axis-sensor connector

A connector for axis sensors such as LS, CREEP and OT.
* LS, CREEP and OT sensors are optional.

7 Motor connector

A connector for driving the motor in the actuator.

8 Teaching-pendant type selector switch

This switch is used to select the type of the teaching pendant to be connected to the teaching connector (9). Specifically, you can switch between IAI's standard teaching pendant and the ANSI teaching pendant. Operate the switch on the front face of the board in accordance with the teaching pendant used.

9 Teaching connector

This teaching interface is used to connect IAI's teaching pendant or a PC (PC software) to operate/set the system, etc.

10 System I/O connector

An I/O connector that governs the safety operation functions of the controller. Controllers of the global specification let you configure a safety circuit conforming to safety categories of up to 4 using this connector and an external safety circuit.

11 Panel window

This window consists of a 4-digit, 7-segment LED and five LED lamps showing the system status.

Q type (Absolute brake unit + Expansion base, 6 axes)

Description of 5 LEDs

Name	Status when the LED is lit
RDY	The CPU is ready (program operation can be performed).
ALM	A CPU alarm (system-shutdown level error) or CPU hardware error is present.
EMG	An emergency stop is actuated or CPU hardware error or power-supply hardware error is present.
PSE	A power-supply hardware error is present.
CLK	A system clock error is present.

12 Mode switch

This alternate switch with lock is used to specify the running mode of the controller. Pull the switch forward and then tilt it up or down. The top position indicates the MANU (manual operation) mode, while the bottom position indicates the AUTO (automatic operation) mode. Teaching can only be performed as manual operation, and automatic operation using external I/Os is not possible in the MANU mode.

13 Standard I/O connector

A 50-pin flat connector constituting 32-input/16-output DIOs.

Overview of standard I/O interface specifications

Items	Description
Connector name	I/O
Applicable connector	Flat connector, 50 pins
Power supply	Power is supplied from connector pin Nos. 1 and 50.
Inputs	32 points (including general-purpose and dedicated inputs)
Outputs	16 points (including general-purpose and dedicated outputs)
Connected to	External PLC, sensors, etc.

14 General-purpose RS232C port connector

A port for connecting general-purpose RS232 equipment. (Two channels are available.)

15 Field network board slot

A slot that accepts a fieldbus interface module.

16 Expansion I/O board slots (optional)

Slots that accept optional expansion I/O boards.

17 Brake power input connector

A power input connector for driving the actuator brake. 24 VDC must be supplied externally. If the specified power is not supplied, the actuator brake cannot be released. Always supply 24 VDC for an axis with brake. Use a shield cable as the brake power-supply cable and connect the shield on the 24-V power supply side.

18 Brake release switch connector

A connector for the switch that releases the actuator brake externally to the controller. Shorting the COM terminal and BKMRL* terminal of this connector will release the brake. Use this method if you wish to manually operate the actuator after the controller has experienced a power failure or malfunction.

19 Brake switch

An alternate switch with lock for releasing the axis brake. Pull the switch forward and then tilt it up or down. Set the switch to the top position (RLS) to forcibly release the brake, or to the bottom position (NOM) to have the brake automatically controlled by the controller.

Option

Regenerative Resistor Unit

Model REU-1

Description

This unit converts to heat the regenerative current produced when the motor decelerates. Although the controller has a built-in regenerative resistor, its capacity may not be enough if the axis is positioned vertically and the load is large. In this case, one or more regenerative units will be required. (Refer to the table shown to the right.)

Specifications

Item	Specification
Dimensions	W34mm×H195mm×D126mm
Weight	0.9kg
Built-in regenerative resistor	220Ω 80W
Accessory	Controller cable (model CB-ST-REU010) 1m

Installation Standard Determined by the total motor capacity of vertical axes connected.

Horizontal application

Motor wattage	P/Q type	J type	K type
~200W	Not required	Not required	Not required
~800W	1 unit	Not required	Not required
~1000W	1 unit	–	Not required
~1500W	2 unit	–	Not required
~2000W	3 unit	–	–
~2400W	4 unit	–	–

Vertical application

Motor wattage	P/Q type	J type	K type
~100W	Not required	Not required	Not required
~200W	1 unit	Not required	Not required
~400W	1 unit	1 unit	Not required
~600W	1 unit	1 unit	1 unit
~800W	1 unit	2 unit	1 unit
~1200W	2 unit	–	2 unit
~1600W	3 unit	–	To be discussed separately
~2000W	4 unit	–	–
~2400W	5 unit	–	–

Absolute-Data Retention Battery (XSEL-J/K/KE/KT/KET)

Model IA-XAB-BT

Features

A battery that retains the data stored in an absolute-type controller. Replace the battery promptly once the controller generated a battery alarm.

Packaging

Sold individually. (One battery is needed for each axis. Specify a quantity corresponding to the number of axes used.)

Absolute-Data Backup Battery

Model AB-5

Features

A battery that backs up absolute data when an absolute-type actuator is operated.

Expansion PIO Board

Description

An optional board for adding I/O (input/output) points. With the general-purpose and large-capacity types, up to three expansion PIO boards can be installed in the expansion slots. (With the compact types, only one expansion PIO board can be installed in the expansion slot provided that the controller is of 3 or 4-axis specification.)

DeviceNet Connection Board

A board for connecting the XSEL controller to DeviceNet.

Item	Specification
Number of input/output points	1 board, 256 input points / 256 output points * Only 1 board can be installed.
Communication standard	Interface module certified under DeviceNet 2.0 (certification to be obtained) Group 2 only server Insulated node operating on network power supply
Communication specifications	Master slave connection Bit strobe Polling Cyclic
Baud rate	500k/250k/125kbps (switched using DIP switches)
Communication cable length	Baud rate Maximum network length Maximum branch length Total branch length 500kbps 100m 6m 39m 250kbps 250m 6m 78m 125kbps 500m 6m 156m Note) When a large-size DeviceNet cable is used.
Communication power supply	24VDC (supplied from DeviceNet)
Communication power consumption	60mA min.
Number of occupied nodes	1 node
Connector	MSTBA2.5/5-G.08AUM by Phoenix Contact (*1)

(*1) The connector on the cable (SMSTB2.5/5-ST-5.08AU by Phoenix Contact) is a standard accessory.

Expansion SIO Board (General-Purpose Type Only)

Model/Specification

IA-105-X-MW-A (Board + 2 joint cables)
IA-105-X-MW-B (Board + 1 joint cables)
IA-105-X-MW-C (Board + 1 joint cables)

Description

A board for serial communication with external equipment. This board has two port channels and implements three communication modes using the supplied joint cable(s).

CC-LINK Connection Board

A board for connecting the XSEL controller to CC-Link.

Item	Specification
Number of input/output points	Remote device: 1 board, 256 input points / 256 output points * Only 1 board can be installed. Remote I/Os: 1 board, 16 input points / 16 output points * Up to 3 boards can be installed (in expansion slots).
Communication standard	CC-Link Version 1.10 (already certified)
Baud rate	(switched using a rotary switch)
Communication method	Broadcast polling method
Synchronization method	Frame synchronization method
Encoding method	NRZI
Transmission path type	Bus type (conforming to EIA RS485)
Transmission format	Conforming to HDLC
Error control method	CRC(X ¹⁶ +X ¹² +X ⁵ +X ¹)
Number of occupied stations	1 to 3 stations (remote device stations)
Communication cable length	Baud rate (bps) 10M 5M 2.5M 625k 156k Cable length (m) 100 160 400 900 1200
Connector (controller end)	MSTBA2.5/5-G.08AUM by Phoenix Contact (*1)

(*1) The connector on the cable (SMSTB2.5/5-ST-5.08AU by Phoenix Contact) is a standard accessory.

Option

Teaching pendant

Features A teaching device providing program/position input function, test operation function, monitoring function, and more.

Model

Model	Description
IA-T-X	Standard type
IA-T-XD	Deadman switch type
IA-T-XA	ANSI type

Configuration

IA-T-X/D

IA-T-XA

Specifications

Item	IA-T-X/D	IA-T-XA
Ambient operating temperature, humidity	Temperature 0~40°C, Humidity 85% RH or below	
Operating ambience	Free from corrosive gases. In particular, there shall be no significant powder dust.	Protective structure conforming to IP54
Weight	Approx. 650g	Approx. 600g (excluding cable)
Cable length	4m	5m
Display	LCD with 20 characters x 4 lines	LCD with 32 characters x 8 lines

PC Software (Windows Only)

Features A startup support software program offering program/position input function, test operation function, monitoring function, and more. The functions needed for debugging have been enhanced to help reduce the startup time.

Model IA-101-X-MW(with RS232C Cable)

Configuration

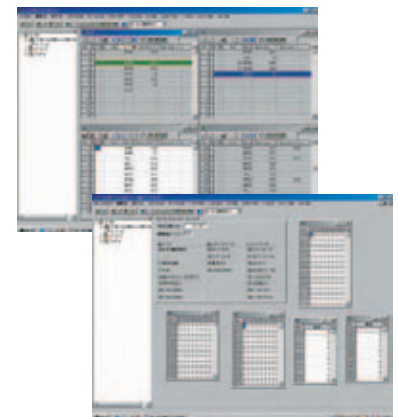

Model IA-101-XA-MW(with Safety Category 4 Cable)

Configuration

Model IA-101-X-USBMW(with USB Conversion Adapter + Cable)

Configuration

Spare Parts

Should you require spare parts after the purchase of your product for replacing the original cables, etc., refer to the model names specified below.

Motor Cable/ Motor Robot Cable

Model **CB-RCC-MA** / **CB-RCC-MA** -RB

* □□□ indicates the cable length (L). Lengths up to 20 m can be specified.
Example 080 = 8 m

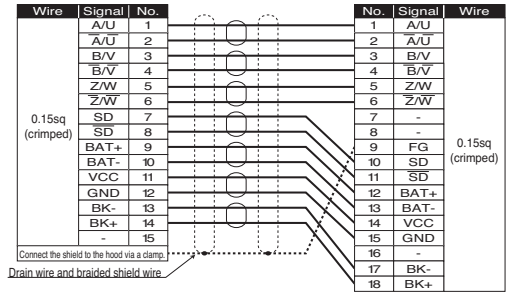

Wire	Signal	No.	No.	Signal	Wire
0.75sq	PE	1	1	U	0.75sq (crimped)
	U	2	2	V	
	V	3	3	W	
	W	4	4	PE	

Spare Parts

Encoder Cable/ Encoder Robot Cable (XSEL-J/K Types)

Model **CB-RCBC-PA** / **CB-RCBC-PA** -RB

* □□□ indicates the cable length (L). Lengths up to 15 m can be specified.
Example) 080 = 8 m

Encoder Cable/ Encoder Robot Cable (XSEL-P/Q Types)

Model **CB-RCS2-PA** / **CB-X2-PA**

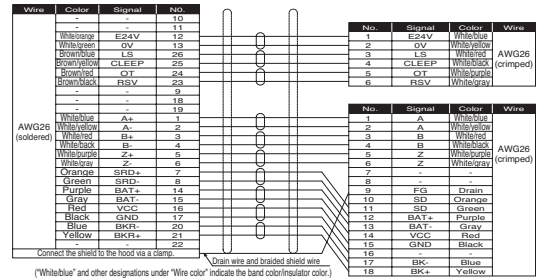

* □□□ indicates the cable length (L). Lengths up to 20 m can be specified.
Example) 080 = 8 m

Encoder Cable/ Encoder Robot Cable

Model **CB-RCS2-PLA** / **CB-X2-PLA**

* □□□ indicates the cable length (L). Lengths up to 30 m can be specified.
Example) 080 = 8 m

Limit Switch Cable (XSEL-J/K Types)

Model **CB-X-LC**

* □□□ indicates the cable length (L). Lengths up to 20 m can be specified.
Example) 080 = 8 m

I/O Flat Cable (XSEL-J/K/P/Q Types)

Model **CB-X-PIO**

* □□□ indicates the cable length (L). Lengths up to 10 m can be specified.
Example) 080 = 8 m
